Exploring the Secrets of Apple DOS

Plus Atari, Commodore, Heath, IBM PC...

We're Expanding Your Personal Computer With Reliable Hard-Line Thinking

Let's cut through all the "compu-babble" about hard-disk systems with some hard-line thinking.

If you own an IBM-PC*, Apple II* or TRS-80* Model III, and want to expand to a hard-disk system, you want some fairly basic things from Winchester technology:

- More storage capacity than your present system
- Faster retrieval and storage of information
- Accurate processing with reliable hardware and software

PERCOM DATA was pioneering critical, reliable data separation functions for micro systems long before many of today's companies even began. PERCOM DATA's solid industry reputation is your promise of hard-disk performance, from a drive with specifications equal to or superior to your own system.

PERCOM DATA 5¼ inch PHD's™ are your easy, hard-line answer. These units are available in 5, 10, 15 and 30 megabyte models. The First Drive unit has a micro-processor-based drive controller, permitting you to add up to 3 more hard-disk PHD's. And PHD series prices are more than competitive, whether your system is an IBM-PC, Apple II, or TRS-80 Model III.

So, if you're ready to expand your system, do it with PERCOM DATA's PHD. Our hard-line thinking of more than half a decade means you get a reliable, high-quality PERCOM DATA peripheral, backed by the PERCOM DATA Performance Promise.

Take a hard-line of your own today! Call one of our Sales Consultants for more information and specifications or for the name of your close-by PERCOM DATA Dealer.

PERCOM DATA's Hard-Line Hotline is 1-800-527-1222

After you experience Data Communications with A.E. PRO™ you'll never settle for being earthbound again!

SOUTHWESTERN DATA SYSTEMS...

- **First** to create terminal software for the Apple II
- **First** to use Macros in a data communications package
- **First** to provide terminal emulation in Apple communications software

Once again, SOUTHWESTERN DATA SYSTEMS creates a software package so far advanced, so innovative, that there are no comparisons.

A.E. PRO (ASCII Express "The Professional"™) truly sets new standards!

Literally thousands of man-hours of work and study have produced the first data communications package that fully utilizes the potential of your Apple Computer System. What does this mean to you?

COMPLETE HARDWARE COMPATIBILITY

Only A.E. PRO takes full advantage of ALL current modem devices available for the Apple II.

Only A.E. PRO supports ALL 80 column boards for the Apple II.

Only A.E. PRO supports ALL printer cards for the Apple II.

This means ALL communications interfaces, ALL printer interfaces, and ALL display interfaces including 80 column cards and external terminals. It couldn't be simpler.

Speeds of up to 9600 Baud are supported, including 110, 300, 1200 and Baudot.

EASY DATA TRANSFER

Data transfer is what communications software is all about. A.E. PRO lets you send and receive with equal ease.

A simple dual key stroke will direct incoming data to its large, up to 28K "capture-buffer", your printer, (with no character loss), or both simultaneously. The buffer can then be written to disk, printed or edited with A.E. PRO's versatile built-in editor.

Data larger than the capacity of the buffer can be saved in buffer-sized "chunks" by use of the auto-save feature, an extension of the popular XON/XOFF protocol used by most main frame computers. As your Apple's memory fills up, A.E. PRO signals the host to pause (XOFF), writes the buffer to disk, and then directs the host to resume sending (XON).

Prices and specifications subject to change without notice.

ERROR FREE TRANSFERS

A wide range of send modes is provided. Everything from the simplest blind block dump, to a packet-oriented error checking mode ensures quick and easy error-free transfer of all sorts of data to practically any host computer. Even the slowest or most awkward systems are easily accommodated.

When two A.E. PRO's are used, you can SEND OR RECEIVE FILES OF ANY TYPE OR SIZE with complete error checking.

POWERFUL MACRO SYSTEM

A.E. PRO supports up to 26 complete macro libraries (remember, S.D.S. pioneered communications macros). Each library contains all macro strings and configuration parameters (baud rate, duplex, parity, etc.) unique to a specific host.

With A.E. PRO's macro facilities you can, with simple keystrokes, direct it to automatically call another computer, connect, and perform complete log-on sequences, virtually instantaneously.

SOPHISTICATED TERMINAL EMULATION

With A.E. PRO, your Apple can "mimic" the display characteristics of many popular terminals, including ADDS, Data General, DEC, Hazeltine, HP, IBM, Lear Siegler, Soroc, Televideo, and many others.

BUILT-IN TEXT EDITOR

A.E. PRO contains a versatile built-in text editor that can easily create or manipulate text. In fact, this editor is more flexible in many respects than some being touted as "word processors". It provides the ease of use of a line oriented editor, with the line editing power of many screen oriented editors, and will process files of up to 35K in size!

RELIABLE UNATTENDED OPERATION

A.E. PRO allows completely unattended answer mode with password protected log-on. In this mode, the caller can remotely send or receive files of ANY type or size.

A.E. PRO can also function as an answerback DDD or TWX node to forwarding mail systems such as Telenet's Telemail, and many others.

A.E. PRO is a member of a family of programs, which include P-TERM "The Professional"™ for Apple Pascal and Z-TERM "The Professional"™ for Apple CP/M™. All three packages share many of these powerful features and operate nearly identically.

For more information write or call us for your free copy of our product catalog and software comparison guide, which include detailed information on all "The Professional"™ series software.

A.E. PRO and other "The Professional"™ series packages are now in stock at local dealers everywhere.

Suggested Retail Price:

On the cover: As more and more homeowners turn to solar energy as a means of energy savings, they are finding it practical to control their systems with microcomputers for maximum comfort and efficiency. James Gupton's feature article examines the practicality and operation of microcomputer-controlled solar energy heating systems for home and hot water. See page 36. Cover photo shows a solar installation site in Florida (photo courtesy of Gulf Thermal Corporation, Sarasota, FL).

Grab Your Share Of Low-End Market

It's War!—And You Can Win!

Whenever there are big bucks being fought over, if you look carefully you can usually find a way to get part of the action. Look at what happened with the Radio Shack TRS-80 situation. Despite the Shack's every effort to keep news of the after-market for their computers a secret, a whole industry has sprung up around them, now selling software and add-ons to the tune of hundreds of millions of dollars. *80 Micro* readers alone report that they spent over \$300 million last year.

A similar situation is building up around the low-end computer market, so let's see how this has developed so far, where it may be going and how you can take advantage of the situation. Microcomputers have already made a lot of new millionaires, and there will be many more coming along.

Now, to put this into perspective, let's remember that microcomputers got started back in 1975 with the Mits Altair computer, which was sold mostly in kit form. Mits had everything their way except an ability to see the long-range ramifications of what they were doing. The original idea was brilliant.

Then, when the first competition came along in the form of the Sphere computer, they panicked and tried to compete with the Sphere. The Altair was based on the 8080 chip and the Sphere on the 6800, so Mits rushed out a 6800 version of their computer, which, as far as I know, never worked very well. Of course, neither did the Sphere, which eventually blew away.

This little battle weakened Mits and forced them to accept a takeover by Per-tec, then mainly a manufacturer of disk drives.

The first computers were sold by mail order and via orders taken by a factory sales team going around in a camper. Then the first computer store opened in mid-1975, and this quickly became the

way to sell microcomputers. The one store in August 1975 grew to 50 in 1976 and 500 by August of 1977, when Radio Shack announced their TRS-80, which they sold from their over 5000 company-owned stores. They backed this with magazine advertising, plus television and newspaper ads, and sales zoomed upwards, quickly passing everyone else in the field.

With the coming of the low-end computers such as Atari 400, the Shack could see that if they were going to keep up with the microcomputer market they would have to cover the low end, the middle and the high end—hence the 1980 introductions of the TRS-80 Model III for

Today, low-end computers
are developing
into a huge market.

the middle ground, the Model II for the high ground and the Color Computer (CoCo) for the low end.

Today we see the low-end computers developing into a huge market, with the Atari 400, the TI 99/4A, the Commodore VIC-20 and Max, the Timex-1000 (Sinclair-ZX81) and the TRS-80 CoCo battling for outlets and advertising. This time, at least for the time being, it is Radio Shack which is taking the shellacking.

Though they now have about 6400 company-owned stores, plus perhaps 2500 independently-owned associated stores, they are finding themselves up against Atari and TI, who are rushing their computers into discount stores, department stores, and just about any consumer store which will give them counter space. Worse, by virtue of this massive distribution, Atari and TI have been able

to cut their prices and put CoCo out of the running.

The dual nature of Radio Shack, which was their early strength, is now their weakness. If they are going to really compete in this developing home computer market they are going to have to sell the CoCo through thousands of non-Radio Shack outlets. If they do that they will obviously weaken their major marketing strength for selling middle- and high-range computers—as well as hurting their huge toy market. It's a no-win situation.

The Shack has been indecisive about this, which is understandable. They are tentatively releasing a special model of the CoCo through RCA distribution, testing the waters. But if they go all the way, getting the CoCo into tens of thousands of stores, and thus building up the production quantities which will allow them to lower prices to compete with Atari, TI and Commodore, they will be doing it at the expense of their own stores. And if they don't do this, obviously they are going to have to get out of the low-end business and forget the CoCo.

There is another, even better alternative, but I'm not crazy enough to put the best solution to their problem in print and just plain give it to 'em. I'm generous, but not fanatically.

With low-end computer systems being sold through tens of thousands of discount stores, we are going to have millions of families buying small computers, and this is going to be one hell of a market for software and add-on accessories. It seems reasonable to project a time in the near future when it is going to be very difficult to sell a dedicated game computer because for a very few bucks more a family will be able to buy a computer which can not only play the same games, but also will be usable for a wide range of other applications. Atari, Commodore, TI and Timex see this handwriting on the wall. Mattel must too, so we should be seeing a Mattel computer soon.

The situation for the entrepreneur is

WIN \$5,000 Plus Royalties!*

**For the best
Talking Game**

**For the Atari®
or Apple® II+**

Using the VOICE BOX™

Now you can make your Atari® 400/800 or Apple® II games and other programs come alive with the VOICE BOX by the Alien Group — the first low-cost, smart speech synthesizer with unlimited vocabulary.

Add jokes to your programs. Insults. Compliments. Help messages. Stories. Alien voices. Animal roars. Have your computer talk to the fire department or police in emergencies. To kids. Or blind people. Teach touch typing with immediate spoken feedback. Or just about any other subject — the fun way. Or help a speech-impaired friend communicate... the possibilities are limitless.

The VOICE BOX plugs into your Atari's serial port. And talks directly through your TV set. Or into any Apple II slot. No power supply or special interfaces needed.

Just select from its simple screen menu. A dictionary with thousands of common words (on diskette or cassette) automatically translates your text into speech. It's that easy.

But don't let its friendliness fool you. The VOICE BOX has all 64 phonemes (basic sounds, like "ah") built in. So you can precisely create any word or sound you can imagine. And store it all on diskette or tape. Names or foreign language words, for example. Or weird non-human languages.

Let me entertain you — The VOICE BOX is creative too. It will crack you and your friends up with non-stop random, grammatically correct sentences, using words you specify. It

Speech Synthesizer

also has an amusing talking face with lip-sync animation — a real crowd-stopper. Best of all, you can call the VOICE BOX from any BASIC program and make your program really hum — literally!

Singing Apples? — Apple owners get all these capabilities too — as a plug-in card plus diskette. Or there's a deluxe version with the dictionary in ROM (no diskettes to bother with), speaker, and ability to "sing" (hey we're not making this up folks) in any key. (Both Apple versions require 32K or more. Applesoft and DOS 3.3).

Don't confuse the VOICE BOX with "dumb" speech synthesizers that can't learn new words. Or software-based ones with lower speech quality — and an annoying tendency to blank out the display when they talk. The VOICE BOX is a true breakthrough in speech synthesis. Small wonder thousands of Atari and Apple owners have already bought the VOICE BOX.

The VOICE BOX is available now at leading computer stores throughout the world. Or direct from the Alien Group, with 10-day money back guarantee if you're not completely satisfied.

VOICE BOX For Atari. \$169.00

16K and 32K versions included
(Specify diskette or cassette).

VOICE BOX for Apple II+ \$139.00.

(Requires speaker.)

VOICE BOX for Apple II+. \$215.00

(Includes dictionary in ROM and singing capability. Comes with speaker.)

similar to the one the industry faced when Radio Shack made it clear that they wanted all the marbles as far as selling products through their stores was concerned. The TRS-80 support industry had to turn to 80 Micro and sell the products to the TRS-80 owners via mail order. Computer stores not selling the TRS-80 systems, which was almost all of them, didn't want to carry products supporting a system they didn't sell, so the industry had no place to turn but to 80 Micro. And turn they did, building the 132-page magazine of early 1980 to the over 500-pager of today—making many new millionaires in the process.

Again, it is not going to be practical to try and reach the home computer buyers through K-Mart to sell them software, added memories, printers, music keyboards, and so on. Only the billion-dollar firms can cope with the costs of selling through this type of distribution... and only the fastest selling products would be welcome anyway. These outfits have to move merchandise by the carload to stay in business. They have to be able to sell everything with untrained check-out clerks, not computer expert salespersons.

If you have your eye on making it big (and why not?—the pains of being rich are more than made up for by the comfort of money), perhaps now is the time to start laying the groundwork for taking advantage of this coming market. Remember that once people buy a new toy they start looking for gadgets to add to it. It is fun to buy gadgets. In this case we have a market which is going to need thousands of programs, lots of accessories, printers, charting systems, plotters, modems, controls for model trains, and so on. It is going to need computer covers, computer benches, computer cleaning kits, computer testing programs and hardware, and so on. The need will be there for disks of all kinds, voice recognition units, talking units, light shows. The list is endless.

You can get started with this by getting one of the systems and tackling the software development. You might pick out some of the best programs you've seen published in this magazine or in 80 Micro and convert them to run on your new computer—the Atari 400, for example. I can assure you that any number of program publishers will be interested in talking with you, but in this case, since you're screwing around with software we have copyrighted, you'll want to discuss distribution via Instant Software, the only mass distribution firm who can use our copyrights. You will have to share your royalties to some extent with the original author of the program, obviously.

Next you may want to contact Instant Software (and other firms) about converting TRS-80 programs to run on your chosen low-end system. You'll have to do a good bit of work on the graphics, of course, but remember that the more

work you do, the better will be the royalty percentages. Instant Software will, by the way, be experimenting with some trees of software in major discount houses, so the very best selling programs will have an opportunity to really make it big. Most programs will have to start out via mail order and build up a reputation before they can be risked for true massive distribution.

Hardware accessories should be designed to sell for as low a price as possible. It is unlikely that many customers will want to spend \$500 for an add-on for a \$200 computer, right? We may be able to get away with that for printers and plotters, but most gadgets should be aimed at the low end.

Since these \$200 computers can do just about anything that the higher-end computers can do, the people buying them are going to have to turn to the magazines (such as this) to learn more. I think we'll be developing quite a big market via this route.

Mail order is a wonderful business. It is one which you can run from just about anywhere. Heck, the magazine business is mail order, so soon after starting in publishing I moved to where I felt was the best part of the whole country to live: New Hampshire. A whole publishing mecca has built up around me in the last 20 years, as was mentioned in the *Wall Street Journal* recently (9-2-82—a nice birthday present for me).

In mail order you can start with a minimum of expense and gradually build up your business, adding products as you grow. You're your own boss. Oh, there are a lot of things you have to learn to be a success in mail order. You have to learn about advertising, how to write ads and sell copy, how to get your products made, how to ship them, how to handle problems... and dishonest customers. You want to know about making up your catalogs, which means writing, typesetting, printing, handling list rentals and so on. You certainly want to computerize as much of the operation as you can, as soon as you can.

When you are depending on direct mail and mail order sales you must measure the sales you get from every ad as exactly as you can. You must have follow-up sales literature for prospective customers who write for more information or who send in reader's service cards to the magazines. The follow-up letters should be professionally done. This means that either you are going to learn to do it and be the professional or else shell out a lot of money to get a professional to do the writing.

Those are later worries. The first thing is to get started converting programs for the Timex, the Atari, VIC and TI, and maybe even a few for CoCo. And start looking at these systems and see what they need for expansions... perhaps a better keyboard or maybe an interface for an IBM 75 typewriter. □

LOWER PRICES, COME HELL OR HIGH WATER.

“ I'll match any advertised price on any item you want to buy from us. And if—Heaven forbid!—you find a lower price on what you bought within 30 days, just show me the ad and I'll refund the difference. ”

One-Pagers For the PC

Three Useful Utilities

IBM has gone to great lengths to configure its Personal Computer, software and peripherals to its users' needs.

When the PC's Basic or BasicA (an advanced version of disk-based Basic which features enhanced graphics and sound commands) is brought up, the "function keys" (which are located to the left of the regular keyboard) are pre-configured for the user.

For example, pushing key F1 enters a List command into the computer, F2 runs the program in memory and F3 enters the Load command plus a double quote sign (") into the machine so that the operator has to enter only a file name to get a new program.

Additionally, the trouble the "baby blue" folks took to integrate their chosen peripherals into their system is obvious. Although an advanced user might quibble about the choice of an Epson 80 printer (the "IBM Personal Computer Printer" is an Epson with an IBM nameplate) as the right choice for serious word processing, it's hard to argue over how well the machine and its dot-matrix printer work.

One of the most convenient features is a "screen dump" key on the keypad. By pressing the "PrtSc" key, the operator can dump the text-only portions of any screen to the printer. Now that's thinking ahead!

Still, there isn't much software around for real work on the IBM, especially when utilities are of concern. And potential users are still trying to decide just *what* it is this baby IBM offers that should entice them to bury that H-89 or Apple in the closet, or bite the bullet on a new system, or take the plunge on their first.

What I'll do in this column is introduce potential users to just a few of the PC's advanced commands. At the same time, I'll give current users three utilities which have proven useful to me in everyday programming.

And, since only one of those three utilities is completely restricted to the PC and unadaptable to other machines, even you H-89 users or others with Epsoms will find two printer routines you can use, one which will pretty up your listings and other output, and the other which is most

useful in designing and printing forms for the Epson.

Three IBM One-Pagers

1. Program SOFTKEY.BAS

Listing 1 shows SOFTKEY.BAS, an IBM Basic (or BasicA) program which resets the PC's ten softkeys to better suit my programming needs. The program works on both the monochrome and color adapter boards for the PC.

The PC allows its owner to display text and limited graphics with a "monochrome," or single-color green-on-white display, or to add a 16K color graphics card which displays 16 different colors, independent background colors and even screen border colors in many formats. So it doesn't matter which you have.

Fig. 1 shows the output when the program is run. Let's step through the listing line-by-line, making sure to say a kind word about that professional-looking listing frame at the top of the program list.

Lines 10-30, of course, are comments, but I can't urge you too much to "waste" the space and write them in liberally in everything you do. I often don't get back to my machine for a week or more at a time, and when that happens, it's easy to forget just what that little routine I was so proud of was supposed to do.

Line 40 turns the CRT softkey display on. On the PC, the user has the option of displaying the function key labels on line 25 of the monochrome or color display. Line 25 does not scroll with the rest of the display but remains fixed in place.

Sometimes, of course, you don't want

```

Thomas V. Bonoma, 45 Drum Hill Road, Concord, MA 01742, is a professor of marketing and an independent consultant, as well as an addicted computer hobbyist. A psychologist by training, he is the author of a number of books, articles and monographs on marketing, psychology and management.

Everybody's making money selling microcomputers. Somebody's going to make money servicing them.

New NRI Home Study Course Shows You How to Make Money Servicing, Repairing, and Programming Personal and Small Business Computers

Seems like every time you turn around, somebody comes along with a new computer for home or business use. And what's made it all possible is the amazing microprocessor, the tiny little chip that's a computer in itself.

Using this new technology, the industry is offering compact, affordable computers that handle things like payrolls, billing, inventory, and other jobs for businesses of every size...perform household functions including budgeting, environmental systems control, indexing recipes. And thousands of hobbyists are already owners, experimenting and developing their own programs.

Growing Demand for Computer Technicians

This is only one of the growth factors influencing the increasing opportunities for qualified computer technicians. The U.S. Department of Labor projects over a 100% increase in job openings for the decade through 1985. Most of them *new* jobs created by the expanding world of the computer.

Learn at Home in Your Spare Time

NRI can train you for this exciting, rewarding field. Train you at home to service not only microcomputers, but word processors and data terminals, too. Train you at your convenience, with clearly written "bite-size" lessons that you do evenings or weekends, without going to classes or quitting your present job.

Your training is built around the latest model of the world's most popular computer. It's the amazing TRS-80™ Model III, with capabilities and features to perform a host of personal and business functions. No other small computer has so much software available for it, no other is used and relied on by so many people. And it's yours to keep for personal or business use.

You get plenty of practical experience. Using the NRI Discovery Lab® that also comes as part of your course, you build and study circuits ranging from the simplest to the most advanced. You analyze and troubleshoot using the professional 4-function LCD digital multimeter you keep to use later in your work. Then you use the lab and meter to actually access the interior of your computer...build special circuits and write programs to control them. You "see" your computer at work and demonstrate its power.

(TRS-80 is a trademark of the Radio Shack division of Tandy Corp.)

Computer Assisted Instruction

Your TRS-80 even helps train you. You receive 4 special lesson tapes in BASIC computer language. Using them in your microcomputer, you "talk" to it as you progress. Errors are explained, graphics and animation drive home key points. Within a matter of minutes, you'll be able to write simple programs yourself.

Become the Complete Computer Person

In addition to training in BASIC and advanced machine language, you gain hands-on experience in the operation and application of computers to business and personal jobs. You're trained to become the fully rounded, new breed of technician who can interface with the operational, programming and service facets of today's computers. You're ready to take your place in the new electronic age.

Other Opportunities

NRI has been giving ambitious people new electronic skills since 1914. Today's offerings also include TV/Audio/Video Systems servicing with training on our exclusive Heath/Zenith computer-programmable

25" diagonal color TV...Industrial Electronics, Design Technology...and other state-of-the-art courses.

Rush Coupon for Free Catalog... No Salesman Will Call

Send the coupon for our 100-page catalog showing all courses with equipment and complete lesson plans. There's no obligation other than to yourself. such a line detracting from your beautiful graphics, or else you'd like to use it to display other messages (a good use is for input statements). But here, we'd like to have it on so we can see that the program is resetting the factory functions in the right way.

Lines 50-79 reset six of the keys to functions I find more useful in my system, which has two disks and a monochrome as well as a color adapter.

First (taking line 50 as an example which will explain the remaining resets as well), the Key n statement is one of four types of Key statements which can be used. Key On in line 40 is another; Key Off (to turn the function keys off) is legitimate as well.

It wouldn't be any fun to program without fooling with PC's graphics/color capabilities.

Key List, which we'll see in line 95, prints the listing of the softkeys and the current functions on the screen. And, the Key n statements I'm using in lines 50-79 are used to define/redefine the softkeys.

For line 50, when F1 is pushed I've pro-

grammed the machine to switch to an 80-column screen width by causing the F1 key to enter Width 80 and Return when pressed (the PC has two selectable screen widths for text display—40 and 80 columns).

Two lines down, Key 6 will be redefined to switch the display to 40 columns, allowing the operator to switch back and forth at will.

Line 75 reprograms Key 2 from the PC's default Run plus Return command to display a Run plus a space. I frequently found that the program I wanted to run was not in the machine, but out on a disk somewhere. It was much easier for me to be able to push the F2 key and then enter B:Softkey than to have the computer madly start to run the program in memory for me again.

If there's anything I absolutely hate to type, and usually wind up typing all day, it's disk catalog requests. I never know what's on the disk, or whether the program I'm looking for is in drive A or B.

Conversely, though I occasionally use the PC's built-in TRON and TROFF (TRace ON and TRace OFF functions, which are debugging aids for Basic programs), I don't use them nearly as frequently as disk cataloging. For me, the PC people made a bad choice when they devoted two of the softkeys (F7 and F8) to these functions.

Therefore, it was the easiest thing in the world to replace F7 and F8 with the command to catalog drive A and B, respectively. Note that the CHR\$(34) command at the beginning of each of these softkey assignments is merely a cheater's way to get a double quote (") into the softkey string. You can't type just one or the program will think that you're closing the assignment string and read the assignment as a null (") string.

It wouldn't be any fun to do straight programming without fooling a bit with the PC's graphics/color capabilities. I was unable to write this utility without doing so.

Statement 85 turns off the softkey display (with the "old" values), changes the color on the monitor (if used; otherwise nothing happens in monochrome) to a light-blue text with a cyan background. It also turns the softkey display back on and sets the color of the display to white on black with no border (Color 7,0,0).

If you're using a monochrome adapter, you'll see the new softkey labels in high-intensity white and the numbers before the new labels underlined. If you're using a color adapter, you'll see the new labels in a pretty way.

Line 90 locates the cursor (like a PRINTAT in TRS-80) at CRT line 20, column 30, and prints the message "Soft keys are set." Line 95 sets the text color to green (on a color adapter—there's no effect on a monochrome one) and sets a red border around the screen (COLOR 2,0,4). It then relocates the cursor to row 1, column 1 of the screen and prints a line

I.B.M. ONE-PAGER: Program TOPBOX.BAS

by Thomas V. Bonoma

Puts a variable-sized box or border on the printed page.

```
100 REM Print a Box on the Epson/IBM Printer
110 CLS: INPUT "How wide should the box be, or enter 0,0 for defaults of 1,75)"
:START, FINIS
115 IF START=0 AND FINIS=0 THEN START=1:FINIS=75:GOTO 200
120 IF START<1 THEN 110
130 IF FINIS>79 THEN 110
140 IF FINIS<START THEN 110
150 START=INT(START):FINIS=INT(FINIS)
200 LPRINT TAB(START);STRING$(FINIS-START,&HAC);
300 LPRINT ""
400 CLS: INPUT "How much of the page to box (1=All;2=1/2 page;3=1/3 page;4=top b
ox;5=4 lines; 6 = check box) ";HOWMUCH
500 IF HOWMUCH<1 OR HOWMUCH>6 THEN 400
600 HOWMUCH=INT(HOWMUCH):IF HOWMUCH=4 THEN HOWMUCH=7
610 IF HOWMUCH=6 THEN HOWMUCH=15
620 IF HOWMUCH=5 THEN HOWMUCH=12
700 FOR I=1 TO INT((66/HOWMUCH)-3):LPRINT TAB(START);CHR$(&HB5);SPC(FINIS-START-
1);CHR$(&HB5):NEXT I
800 LPRINT TAB(START);STRING$(FINIS-START,&HAC);
900 LPRINT:LPRINT:END
```

Listing 2. Program Topbox.BAS puts a variable-sized box or border on the printed page.

Fig. 2. Output from Listing 2.

of graphics characters using the STRING\$ function (which says "25 characters of ASCII number 240," a three-bar equal sign at 25,240). Finally, it Key Lists the new softkey functions for the user before printing another string of graphics to border the listing.

Maybe you don't have two disks, or

even one. If not, you might want to reassign F7 and F8 to better suit your own needs. For example, if you have a cassette tape but not a disk system, type these statements instead of lines 77 and 79 in Listing 1:

```
77 KEY 8, "MOTOR 0"
79 KEY 9, "MOTOR 1"
```

Now, when you hit F8, you'll turn on your cassette. Hit F7 and you turn it off. Or, if you spend all day opening and closing files outside of program control (why, I wouldn't know), you can use the softkeys for this as well.

2. Program TOPBOX.BAS

Listing 2 gives another IBM one-pager, called TOPBOX. That's really a misnomer, and more reflective of the program's origins than descriptive of everything that it can do.

The program, given an IBM PC and an IBM or Epson 80 printer, allows you almost total control over where and how big of a printed box you'd like on your paper. That might include a little check-box suitable for survey work, or an entire page-border that you can use to pretty up your word processing reports.

Let's look at this listing, which should be adaptable by all users (even without PC's printer) if you use an Epson printer.

```
Time: 10:44:50          Date: 09-12-1982

2110 RETURN
```

Listing 3. Program TITLIT.BAS puts up to three title lines on your output.

Line 110 asks what margins the program should use for the box. If the user enters "0,0", default margins of 1 and 75 are invoked. Lines 115-140 are error-check lines, and you should never skimp on these!

In line 115, if the "0,0" response is detected, invoke the defaults and jump over the other error-checks to the print routine in line 200.

In line 120, make sure the user isn't trying to invent a new concept, the "negative margin."

In line 130, you'll need to adapt your box to the width of your paper, which is 80 columns. (Epson 100 users, or those who want to fool with condensed printing on the 80 for this program, can change this value to 132 columns since their machine/mode can handle them.)

Note that IBM Basic allows a variable name of any length to be employed, and it recognizes the first 40 characters of any name. So it's OK to use "CHARACTER032" and "CHARACTER033" as legitimate and useful names.

For those of you adapting this routine to other Microsoft Basic derivatives, you should check your manuals and possibly shorten my variable names to two characters (e.g., ST for START, FI for FINIS).

In line 140, you'll find one more test. If the user is especially creative and attempts to define a situation in which the right margin (end of the page) comes before the beginning, he may be awarded a degree in Zen philosophy but won't win any prize with this program.

In that and all the other error cases, the user is sent back to the input routine to get new values. A better way of doing this is to print a message describing each kind of error before going back to the input routine (but I'm lazy).

Line 200 starts the box-printing routine by tabbing to the start position and printing a string (STRING\$) of FINIS minus start characters described by ASCII code &HAC.

In English, you're asking the machine to tab over to the left end of the box and print a character whose number we've looked up (it's just a fat dash—see Fig. 2) as hexadecimal (&H) number AC. (Let's see now... a C in hex is a 12, an A is a 10. How do I add those again? Oh yeah... 10 in the "16s" place is 160, and 12 in the "1s" place is 12. That must be 172.)

Note the semi-colon at the end of the line. We don't want any carriage return/line feeds until we're done with this business, which is what line 300 does.

Line 400 clears the screen (CLS), and asks the user how tall the box should be. Now, why would anybody with any kind of programming sense start the output, then stop it to get more information? I'll tell you what kind... the kind that likes to know things are working OK between the program and printer before wasting all his time entering data!

You're free to move line 400 up to around line 110 in the program—it

The Smith-Corona TP-1 is the only letter-quality printer for under \$900.* No wonder it's so popular!

The Smith-Corona® TP-1™ Daisy Wheel Printer.

Big problem! You want to get a beautiful, letter-quality printer. Yet you want to keep costs down. Welcome solution: the Smith-Corona TP-1.

It's the only daisy wheel printer on the market that sells for under \$900. So you can get the print quality you really want in a printer, at a price that's well within your budget. (In fact, it's so reasonable, you may find you want a TP-1 even if you already own a dot matrix.)

The TP-1 is just right for small businesses or in-home users. No wonder it's already a huge success!

The print quality of the TP-1 stands up against printers costing three times as much. In fact, you'll get results identical to those of the finest office typewriters. So you'll never again have to send an important letter that doesn't look important.

The TP-1 is also suitable for reports and manuscripts. Even budgets and forms.

Just as important, the TP-1 is amazingly simple to operate. And it's compatible with most microcomputers and available with either standard serial or parallel data interface.

The basic TP-1 handles letter and legal sized paper. A tractor feed option to handle either fanfold or single sheet paper will be available soon. There's a choice of easy-to-change, state-of-the-art daisy print wheels. And ribbon cassettes that just drop in—simple as that.

One other thing: unlike many printers, the Smith-Corona TP-1 is made in America.

So don't settle for a dot matrix printer when you can find (or add) real letter-quality results at an incredibly low price. With the Smith-Corona TP-1 daisy wheel printer.

Smith-Corona

*Manufacturer's suggested retail is under \$900, but prices may vary.

won't make a bit of difference. But I like it where it is.

Anyway, line 400 gives the user six different choices for how big the box should be, from the whole page down to a little check-box suitable for printing at the end of surveys or sentences you'd like to have people check off.

Only one other of the choices is not obvious—top box. I often find it useful to put a blank box at the top of my program listings before I make them, so that I can later write in a running record of the changes I've made to the listing with my pencil, the date and what-not. This makes the job of revising programs marvelously easy.

Line 500 checks for the legitimacy of the input. Line 600 makes sure that the input is integer now if it wasn't before, and the second part of line 600 replaces HOWMUCH with a different number if choice 4 (top box) was made. You'll see why in a minute. Lines 610 and 620 supply similar replacements for choices 6 and 5 from the menu.

Why all that replacing? Look at line 700, which uses HOWMUCH itself to figure out how tall the box should be.

When HOWMUCH equals 1 (the whole page), 2 (half) or 3 (one-third), there's no problem because 66 (the form size of an 11-inch piece of paper) divides conveniently by these numbers. (The three subtracted from the result in line 700 is

Each of these routines can be useful either alone or incorporated into your own larger program.

to give a little slop if your paper isn't exactly at the top of the perforation when you run the program.)

When HOWMUCH equals 4 (top box), 5 or 6, it isn't so straightforward from the point of view of division, so we just replace these values of HOWMUCH with ones that will do the job. The user never needs to know.

The remainder of line 700 should be familiar to you by now. It tabs to start, prints a vertical bar (&HB5) and spaces over to FINIS minus start, minus 1. (The right margin should be at FINIS, minus the amount we used for the white space at the left of the box in START, minus the one vertical bar we've just printed.) Line 700 then sends another vertical bar to form the box until HOWMUCH is exceeded.

Line 800 closes the box in exactly the same manner as line 200. Line 900 sends two carriage return/linefeed commands to the Epson and ends the program.

Fig. 2 gives you some idea of the kinds of different boxes you can draw using this little routine and the Epson. The third box down on the page, for example, is a top box which would ordinarily be printed at the top of a printed listing. We will use the concept of a top box in the next utility to provide a labelling program for printed lists.

3. Program TITLIT.BAS

My last utility is a useful one which puts up to three title lines on your listings and on your other output—nicely boxed and set off from the listing.

The program also makes use of Basic and BasicA's time-of-day and date functions to put those on the title as well, if the user desires. The program is shown in Listing 3.

The output, which has been used for all three of my listings, is the top box on each of the listings and includes the date, time, program name, author's name and program function.

Line 20 in the listing sends the program to subroutine 2000, a useful little routine which allows message entry before the main print routine.

Line 2010 clears the screen (CLS), locates the cursor at row 10, column 1, and prints a message to the user concerning the number of lines he may enter for the title box. Lines 2020 and 2025 tell the user of his other options and constraints.

Line 2030 asks whether the time and

date should be shown in the title box. Line 2040 checks to make sure that nothing other than a "y", "Y", "n" or "N" has been input, or else sends the user back to line 2030.

Line 2050 sets a flag, which is an arbitrary variable name set equal to 1, or true, if something has happened, and 0, or false, if something has not. The flag, named TD, is true if the user *has* asked for the time and date, and is checked in the main routine (Line 31).

Lines 2060-2082 allow the user to input up to three 79-character messages (even though the user is told he can only enter 75 above). Or they allow a Return to be entered to denote that no message is to be put on that particular line. FLS, SLS and TLS (first line, second line, third line) are assigned these messages, which can contain commas, quotes and any other things the user feels are necessary because of the use of the Line Input statements.

Error checking for length is done as the input is made, with verbose users being sent back to try it again.

Lines 2085-2100 set a variable, Count, to tell the main routine how many lines the user has entered. The program presumes that, if you're running this routine, you want *something* in the title box; so, if the first line is blank, it sends you back to line 2020 to try again. Line 2110

returns you to the main routine, which follows the one that called the subroutine (line 22).

Line 22 prints a 75-column fat dash across the screen (see Listing 2). Lines 25-30 are also identical to logic used in Program TOPBOX.BAS.

Line 31 checks flag TD to see if the Time and Date are to be printed. If so, the built-in PC functions of TIMES and DATES are accessed and put up with formatted labels. Lines 32-35 check Count to see how many lines of output there are to go in the box, and send the program to subroutine 1000 (a message-print and centering subroutine) when the vertical spacing is right (I) for outputting neatly formatted text.

Line 37 closes the For loop started in line 30. Line 40 prints the bottom of the title box as a 75-column row of fat dashes before the program outputs two blank lines on the printer and ends at line 50. All that remains is to look at the heart of this program—the message output subroutine in line 1000.

Lines 1010-1027 use a new counter, Xcount, to assign the message variable, MSG\$, with the relevant message (FLS, SLS, or TLS). Line 1030 is the heart of the subroutine, a centering line which prints the left vertical bar of the box, spaces one-half of the distance of the box width (75/2) minus one-half the length of the message

(LEN(MSG\$/2)) and prints the message centered in the box (remember high school typing class?). The final task in line 1030 is to print the right vertical bar on the line.

Finally, line 1040 increments the loop counter I (because we're replacing one of the statements in lines 30-37 with one in the subroutine, we need to account for this), and returns the program *not* to the next program line after the calling statements, as is normal with subroutine returns, but to line 37 with the optional IBM Basic statement return xxx. Those of you with other machines will have to do a little jockeying here with Gotos to get the logic right.

Each of the routines I've described here can be useful either standing alone or incorporated into your own larger program. To do that, renumber the programs with the PC's RENUM function (say, as RENUM 10, 20000, 10 to start the program on line 20000), and Chain Merge them into your own routines. If you are going to use the Chain Merge command in IBM Basic, however, remember to save my routines as ASCII files (e.g., SAVE "B:Softkey.Bas".A), rather than in the encoded format normally used by IBM Basic. Let me know what you do to generalize these routines or improve them, and feel free to incorporate them into your own programs. ■

***The editor that
became an
industry standard***

49^{\$}

What's the catch?

It's our Mini version of VEDIT, but still with more power and flexibility than most editors on the market today. It's better than an earlier version of VEDIT for which thousands of highly satisfied users paid up to \$185.

HERE'S WHAT YOU GET

Exceptional speed and true 'What you see is what you get' full screen editing for program development and text documents. It completely replaces ED (and EDLINE). VEDIT supports all of the new CRT terminals, video boards and 8080, Z80 and 8086 computers. The unique menu driven customization lets you determine your own keyboard layout using any available cursor and function keys. And you can configure a lot more for your particular applications and preferences.

Powerful editing capabilities such as text Move and Copy, complete file handling on multiple drives, iteration macros, printing, an 'Undo' key, and recovery from full disk conditions (you can delete files or change disks). Among its many special features are automatic indenting for use with structured programming languages such as Pascal, 'C' and PL/I, and features which make editing Assembler and COBOL programs a snap. You can even insert a specified line range of another file anywhere in the text, and change disks in the middle of an edit session.

HERE'S WHAT YOU DON'T GET

You don't get our newest features, including word processing, ten text buffers, 'TECO' like command macros and auto-startup. You do get the complete new 125 page manual for both beginning and experienced users.

BUT HERE'S THE BEST PART

We often hear from users that VEDIT has them hooked; they don't want to use any other editor again. If it happens to you, we will apply the \$49 to the full version of VEDIT.

Ordering - Please specify your microcomputer, video board or the CRT terminal version, 8080, Z80 or 8086 code, and disk format. \$49 prepaid. (Shipping: Credit card - \$3, Overseas - \$10, Purchase Order - \$10).

Or order our full version: 8080 and Z80 - \$150, 8086 - \$195, Manual Only - \$18.

Time Is Money

Collect Your Due With This PET Billing Program

Here's a simple little program with a number of possibilities and a few ideas that can easily be used elsewhere. (See program listing.) I wrote it so I could figure out how much I should charge for my consulting services with a local consulting firm. The firm would assign unique project numbers for every project they

undertook and code them by project type. At the end of each month the firm wanted a bill for the time I spent on each project (at an agreed-upon rate) and any expenses that I incurred.

I normally carried a small calendar and simply jotted down my time and expenses each day. At the end of the month

I'd have to go back through the calendar and add up the figures. It got to be kind of messy and time-consuming, so I wrote this quick little program to help out. It's not very fancy but it sure was handy then.

When you run the program it simply keeps asking for a project number and the number of hours spent on that project. So all I have to do is go through the calendar and enter each item in the order in which it's found. If an E is entered instead of a project number, then any general expenses not related to a particular project can be entered. Once a project number is entered, responding with E instead of the number of hours allows me to enter the expenses for that particular project.

When I'm done entering data, I enter a D for the project number. At that point the program asks if all projects are at the same hourly rate. Then the correct hourly rates for all projects or each individual project can be entered.

Once the program has all the necessary information, it sorts the projects into numerical order and computes the total for each project. The information displayed includes the project number, the total number of hours used, the hourly rate, the total expenses and the final total for that project. A separate line shows miscellaneous expenses not related to any particular project; a summary line showing combined totals is also displayed.

I never bothered to print out the totals since I was copying it onto special forms, but it could be done easily. Since I was displaying the final totals on the screen, I limited the program to accept only 15 different project numbers so it would fit on the screen. Again, you could easily change this by changing the DIM statement in line 90.

Looking inside the program, the A matrix records all project information as follows:

- A(.,1) = project number
- A(.,2) = number of hours
- A(.,3) = hourly rate
- A(.,4) = expenses

Program Listing. PET Simple Time Billing.

In addition, A(0,1) contains the number of different project numbers currently entered and A(0,4) contains the total general expenses.

Lines 120-160 get the project number and check to see if it was previously entered by scanning the current matrix entries. When a new project number is entered, it's added at the end of the matrix in line 180. Lines 190-210 get the number of hours while 220-260 get expenses and add them to the current totals. Lines 280-360 get the hourly rate for all projects and lines 380-430 do a simple bubble sort to put the projects in numerical order. Lines 440-520 then print the totals as they're computed.

The subroutine in lines 530-540 is used to format numbers into dollars and cents. Note that hours are rounded to the nearest tenth (line 200) and expenses or rates are rounded to the nearest cent (lines 250, 320 and 350). When multiplying the hourly rate by the number of hours for each project, the total is also rounded to the nearest cent (line 450). These little checks help keep the final display from having odd values that destroy the expected table format.

As I said, the program is not fancy by any means, but it did help solve the problem at hand. I probably could have come up with better record-keeping methods but it was more fun to do it this way, playing with a new computer. If you're not doing consulting work, you can still use the main ideas for many other tasks (e.g. adding tax receipts, client billing or inventory control). You could use key words or names (text strings) instead of project numbers, or add more records per entry.

By showing you a simple problem and a primitive way in which I used a computer to help simplify that task, I hope I've encouraged you to try things on your

own. Incorporate ideas or routines from different programs you see in magazines. Experiment and have fun, and don't be afraid to try an idea. If your first attempt fails, try something else; you'll learn as much from your mistakes as from your successes. (Sometimes even more!)

This new book reveals some interesting graphics capabilities.

A new Hampshire book

Hayden Book Company (50 Essex St., Rochelle Park, N.J. 07662) offers a new book called *PET Graphics*, written by Nick Hampshire of England.

The book, which sells for \$16.95, instructs PET users on how to program graphic displays. It includes machine-language subroutines which provide a wide range of otherwise unavailable graphic functions. They cover fine-resolution plotting, double-density plotting, multiple screen page displays and interfacing a light pen. Appendices include circuit diagrams of the PET video circuitry and the character codes used within the PET. All of the programs presented in the book are also available on disk from Hayden for \$25 but the disk format isn't mentioned.

PET Graphics starts out with a description of how the video display works internally. It shows some simple graphic techniques in Basic and then quickly jumps into machine-language plotting and a presentation of the various machine-language routines included.

There are a few minor errors in logic here and there and quite a few typographical errors, but generally the book is well-written. The (one) major problem is that the machine-language routines are for Basic 3.0 and will not work on the current machines with Basic 4.0 ROMs. Since the machine-language

routines make up a good percentage of the book, it will probably be of limited value to most PET/CBM owners. It's a shame Hayden didn't check it out further before going to print.

Another new book from England has surfaced in the States: *The PET Index*, published by the Gower Publishing Company Ltd. It's a reference index of Commodore PET/CBM/VIC information compiled by Michael A. F. Ryan from some 290 issues of 17 different publications between 1977 and mid-1981. More than 2100 references are listed, along with programs, reviews of books, equipment and programs, technical explanations and tips, applications of the PET, game listings and different languages.

The references are listed in alphabetical order by subject, which helps most of the time. Any updates or corrections that may have appeared in later columns or other articles are noted with the original entry. Each entry includes the article title and author, source, date of issue and page, main programming language, price, type of information available and other references.

The PET Index could be handy for libraries or clubs that have access to the magazines or publications listed in the reference. Bear in mind that it does list a few English newsletters and magazines that you may not have seen. Price of the book was listed in British pounds so I'm not sure what it will be selling for in the United States.

Misc

The PET Benelux Exchange is the only self-supporting and totally independent user's group for Commodore computers in Holland and Belgium. It was founded in 1979 by Copytronics and now has about 1500 members. They have an impressive user's library with more than 45 disks full of programs. They also print an excellent newsletter that's usually printed in Dutch but currently is offered in a special English edition.

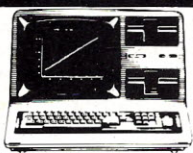

The PBE ROM Special gives complete disassembly listings of the Basic 2.0 and 3.0 ROMs with full explanations of what is happening inside Basic. There are comments on almost every line of code with some block comments describing the following routines. There's also a cross-reference list of all the labels used and an index for both Basics.

Cost for single copies of this special edition sent by airmail is \$20 in the U.S. while a 35 percent discount is available for user groups ordering ten or more copies. For more information, write Burg, van Suchtelenstraat 46, 7413 XP Deventer, Netherlands. □

NEW! TPM* for TRS-80 Model II
NEW! System/6 Package
Computer Design Labs

Z80* Disk Software

We have acquired the rights to all TDL software (& hardware). TDL software has long had the reputation of being the best in the industry. Computer Design Labs will continue to maintain, evolve and add to this superior line of quality software.

— Carl Galletti and Roger Amidon, owners.

Software with Manual/Manual Alone

All of the software below is available on any of the following media for operation with a Z80 CPU using the CP/M* or similar type disk operating system (such as our own TPM*).

for TRS-80* CP/M (Model I or II)
 for 8" CP/M (soft sectored single density)
 for 5 1/4" CP/M (soft sectored single density)
 for 5 1/4" North Star CP/M (single density)
 for 5 1/4" North Star CP/M (double density)

BASIC I

A powerful and fast Z80 Basic interpreter with EDIT, RENUMBER, TRACE, PRINT USING, assembly language subroutine CALL, LOADGO for "chaining", COPY to move text, EXCHANGE, KILL, LINE INPUT, error intercept, sequential file handling in both ASCII and binary formats, and much, much more. It runs in a little over 12 K. An excellent choice for games since the precision was limited to 7 digits in order to make it one of the fastest around. \$49.95/\$15.

BASIC II

Basic I but with 12 digit precision to make its power available to the business world with only a slight sacrifice in speed. Still runs faster than most other Basics (even those with much less precision). \$99.95/\$15.

BUSINESS BASIC

The most powerful Basic for business applications. It adds to Basic II with random or sequential disk files in either fixed or variable record lengths, simultaneous access to multiple disk files, PRIVACY command to prohibit user access to source code, global editing, added math functions, and disk file maintenance capability without leaving Basic (list, rename, or delete). \$179.95/\$25.

ZEDIT

A character oriented text editor with 26 commands and "macro" capability for stringing multiple commands together. Included are a complete array of character move, add, delete, and display function. \$49.95/\$15.

ZTEL

Z80 Text Editing Language - Not just a text editor. Actually a language which allows you to edit text and also write, save, and recall programs which manipulate text. Commands include conditional branching, subroutine calls, iteration, block move, expression evaluation, and much more. Contains 36 value registers and 10 text registers. Be creative! Manipulate text with commands you write using Ztel. \$79.95/\$25.

TOP

A Z80 Text Output Processor which will do text formatting for manuals, documents, and other word processing jobs. Works with any text editor. Does justification, page numbering and headings, spacing, centering, and much more! \$79.95/\$25.

MACRO I

A macro assembler which will generate relocatable or absolute code for the 8080 or Z80 using standard Intel mnemonics plus TDL/Z80 extensions. Functions include 14 conditionals, 16 listing controls, 54 pseudops, 11 arithmetic/logical operations, local and global symbols, chaining files, linking capability with optional linker, and recursive/reiterative macros. This assembler is so powerful you'll think it is doing all the work for you. It actually makes assembly language programming much less of an effort and more creative. \$79.95/\$20.

MACRO II

Expands upon Macro I's linking capability (which is useful but somewhat limited) thereby being able to take full advantage of the optional Linker. Also a time and date function has been added and the listing capability improved. \$99.95/\$25.

LINKER

How many times have you written the same subroutine in each new program? Top notch professional programmers compile a library of these subroutines and use a Linker to tie them together at assembly time. Development time is thus drastically reduced and becomes comparable to writing in a high level language but with all the speed of assembly language. So, get the new CDL Linker and start writing programs in a fraction of the time it took before. Linker is compatible with Macro I & II as well as TDL/Xitan assemblers version 2.0 or later. \$79.95/\$20.

DEBUG I

Many programmers give up on writing in assembly language even though they know their programs would be faster and more powerful. To them assembly language seems difficult to understand and follow, as well as being a nightmare to debug. Well, not with proper tools like Debug I. With Debug I you can easily follow the flow of any Z80 or 8080 program. Trace the program one step at a time or 10 steps or whatever you like. At each step you will be able to see the instruction executed and what it did. If desired, modifications can then be made before continuing. It's all under your control. You can even skip displaying a subroutine call and up to seven breakpoints can be set during execution. Use of Debug I can pay for itself many times over by saving you valuable debugging time. \$79.95/\$20.

DEBUG II

This is an expanded debugger which has all of the features of Debug I plus many more. You can "trap" (i.e. trace a program until a set of register, flag, and/or memory conditions occur). Also, instructions may be entered and executed immediately. This makes it easy to learn new instructions by examining registers/memory before and after. And a RADIX function allows changing between ASCII, binary, decimal, hex, octal, signed decimal, or split octal. All these features and more add up to give you a very powerful development tool. Both Debug I and II must run on a Z80 but will debug both Z80 and 8080 code. \$99.95/\$20.

ZAPPLE

A Z80 executive and debug monitor. Capable of search, ASCII put and display, read and write to I/O ports, hex math, breakpoint, execute, move, fill, display, read and write in Intel or binary format tape, and more! on disk

APPLE

8080 version of Zapple

NEW! TPM now available for TRS-80 Model III!

TPM*

A NEW Z80 disk operation system! This is not CP/M*. It's better! You can still run any program which runs with CP/M* but unlike CP/M* this operating system was written specifically for the Z80* and takes full advantage of its extra powerful instruction set. In other words its not warmed over 8080 code! Available for TRS-80* (Model I or II), Tarbell, Xitan DDDC, SD Sales "VERSAFLOPPY", North Star (SD&DD), and Digital (Micro) Systems. \$79.95/\$25.

SYSTEM MONITOR BOARD (SMB II)

A complete I/O board for S-100 systems. 2 serial ports, 2 parallel ports, 1200/2400 baud cassette tape interface, sockets for 2K of RAM, 3-2708/2716 EPROM's or ROM, jump on reset circuitry. Bare board \$49.95/\$20.

ROM FOR SMB II

2KX8 masked ROM of Zapple monitor. Includes source listing \$34.95/\$15.

PAYROLL (source code only)

The Osborne package. Requires C Basic 2.
 5" disks \$124.95 (manual not included)
 8" disks \$ 99.95 (manual not included)
 Manual \$20.00

ACCOUNTS PAYABLE/RECEIVABLE (source code only)

By Osborne. Requires C Basic 2
 5" disks \$124.95 (manual not included)
 8" \$99.95 (manual not included)
 Manual \$20.00

GENERAL LEDGER (source code only)

By Osborne. Requires C Basic 2
 5" disks \$99.95 (manual not included)
 8" disks \$99.95 (manual not included)
 Manual \$20.00

C BASIC 2

Required for Osborne software. \$99.95/\$20.

SYSTEM/6

TPM with utilities, Basic I interpreter, Basic E compiler, Macro I assembler, Debug I debugger, and ZEDIT text editor.

Above purchased separately costs \$339.75

Special introductory offer: Only \$179.75 with coupon!!

\$160.

This Coupon is Worth
One Hundred And Sixty Dollars
Toward The Full Price Of The
SYSTEM/6 Package
System/6 with this coupon is only \$179.95.
This is a limited time offer.

\$160.00

Sizing Up New Technologies

Will Industry Peak Over Next Three Years?

Welcome to Dial-up Directory! We meet here each month to look at new and interesting products and developments in the field of microcomputers and telecommunications. This month, we will look at a new communications program for the Apple II released by the modem masters at Hayes Microcomputer products. We also will review a nice terminal program for the Atari computers. But first, a hard look into my crystal ball, and then—a contest!

The Future

I am occasionally allowed to prognosticate and philosophize in this column. This month, I am simply going to tell you how to become comfortably rich in five years. It doesn't have much to do with communications, so if you are already comfortably rich, please proceed to the

software reviews.

First, the bad news: The personal computer sales boom is dying. It has a lot of life left and 1983 will probably be the best year yet, but it will also be the best year that ever will be for personal computers. If you are making a living out of microcomputers, limit your long-term overhead and watch your expansion plans. The market has a definite saturation point and it will be reached in '84 or '85. When K Mart starts mass marketing micros, how much longer do you think you will have a unique market?

In 1985, the go-go expansion will be gone and the sales of personal computers will have reached a steady level. What will you do? That's the good news.

A lot of things are coming together. My list of technologies to watch includes:

- Batteries and power supplies

- Sonar and optic sensors
- Very powerful microprocessors
- Cheap solid-state memories
- Small and inexpensive disk drives
- The Ada programming language
- Voice synthesis
- Voice recognition

These technologies or developments all are improving or becoming practical at the same time. When I throw all of these things into a pot, stir them up, and boil them for a while, one big product floats to the top: robots. I don't necessarily mean human-looking devices, but I do mean human-working devices.

Robots (like computers) do dull and repetitive jobs well. As the power supplies, processors, sensors and storage capabilities of these systems improve, they will be able to do more and different jobs well.

Some of the robot jobs I can think of include: housecleaning, office "go-fer," security patrol, care of invalids and lawn mowing. Each of these jobs has numerous variations. Your job is to find the Apple II and VisiCalc of robotics. You have to find the single combination of hardware and application that would be able to sell tens of thousands of systems, lead to many other uses and create a whole new industry.

You can prepare yourself right now. We are at the same stage in robot systems that we were in 1972 with microcomputers. We all still are playing with \$100 four-function calculators. Some big companies are marketing expensive and cumbersome devices for industry, but the practical systems are just ideas in someone's head. You will have to gather together a knowledge of the technologies I listed above, add them to some others and produce the first Altair.

If you want to be comfortably five years from now, I suggest you learn the

The Hayes Terminal Program for the Apple II and Micromodem II is the first in a family of programs for different computer systems. The software isn't fancy, but it provides all of the needed basic functions, including three methods of file transfer and control over the throughput speed.

TEST-FLY A \$20 MILLION JET ON AN APPLE? YES. WITH MICROSPEED.

At the Bethesda Naval Research Center, they've discovered the power of MicroSPEED. The Navy's engineers use this remarkable hardware/software combination to "fly" an advanced fighter aircraft in *real time*—even making vertical landings on a simulated carrier deck. A "crash" is merely another learning experience, and an opportunity to modify the research aircraft—inside the Apple—to improve tomorrow's combat planes.

Surprised that such a sophisticated task is possible on the Apple? So were the Navy's officials, and many others who have discovered...

THE MICROSPEED DIFFERENCE This extraordinary Language System exploits the real potential of the microcomputer for the first time. The difference between MicroSPEED and other programming languages is that with MicroSPEED, there is virtually *no limit* to what you can achieve. It may well be the ultimate language for the Apple II and III (and soon the IBM Personal Computer). MicroSPEED literally combines the performance of a *minicomputer* with an exhaustive set of user-friendly capabilities: hard-

ware math processing, fast hi-res graphics and text, turtle graphics, print formatting, two text editors, unlimited data types, and incredible FORTH extensibility—all at speeds up to 100 times faster than Basic.

USER-FRIENDLY, EASY-TO-LEARN Starting with simple commands that are comfortable even for non-programmers, MicroSPEED extends and builds, allowing you to create your own tailored application languages. The capability of your computer will grow exponentially, as you work in an active partnership with the machine, exploring and developing new problem-solving facilities—creating, correcting, refining your increasingly powerful system.

DEMANDING JOBS AT LOW COST Developed by a team of standout computer professionals, MicroSPEED has been put to the test in fields as diverse as medicine, the stock market, oceanography, and the arts. In even the most challenging applications, MicroSPEED users have been unanimous in their praise of the System and manual. Typical comments are:

"Very high marks,"

Thomas Tosch Ph.D., Tosch Information Management.

"The more I use MicroSPEED, the more I love it,"

James L. Hockenhull, University of Washington.

"Great!...A joy to use,"

Henry Harris, Mission Designer, Cal Tech's Jet Propulsion Lab.

"If you plan to use the Apple or IBM Personal Computer for *any* demanding task, then we built MicroSPEED for you,"

Sam Cottrell, President of Applied Analytics.

MicroSPEED requires the Apple or IBM Personal Computer with single disk. MicroSPEED II includes 2 MHz math processor. MicroSPEED II+ includes 4 MHz math processor.

MicroSPEED
APPLE IS A TRADEMARK OF APPLE COMPUTER INC.

Ada programming language and take a pass at Forth. You should learn all you can about sensor technology and voice synthesis and recognition. You should probably get a liberal dose of old-fashioned ac and dc electrical theory, too. The people who start the next industry will need a different blend of skills from those being taught in the standard engineering curricula. They will also need some good sense of what will sell. The door is wide open.

Over the next three years, personal computer sales will peak and flatten out. Information technology will become a game played between the giants of AT&T, IBM, the separate telephone operating companies, and the alternative carriers. The entrepreneur will be a minor player. Robots, however, will remain open to individuals. The Japanese, General Motors and IBM have leads in the area of robot devices for manufacturing, but you can move into many other application areas if you have the foresight.

When you think you have the VisiCalc of robotics, drop me a line—I want to invest. We now return you to our regularly scheduled program.

Have You Chronographed Lately?

Hayes Microcomputer Products put its Chronograph on the production line a little over a year ago. Since that time the company has sold many of these clock/calendar devices.

The Chronograph contains an RS-232C port and can respond to a request for the time or date or send a message over the serial line to the computer at a preset time. It has battery backup and several other automatic features.

I have a question for you Chronograph owners and a prize for the best answers. The question is simple: What do you do with your Hayes Chronograph? I know it makes a nice digital clock, but at a list price of \$249, you have to do more with it than use it as a room clock. Tell me how you use your Chronograph.

Do you really have to have two RS-232C ports, or have you figured out how to put the clock and modem together into one port? What kinds of applications programs have you developed? How have you integrated the Chronograph's capabilities into your programs? The uses you describe don't have to be for communications. I don't care if you use the Chronograph and computer to open your garage door when you come home from work, but tell me what you do with it.

The most practical and creative applications will be rewarded with an autographed copy of either one of my books, *Microcomputer Data Communication Systems* or *TRS-80 Data Communication Systems* (your choice), and the thrill of having your creativity inscribed indelibly here in the pages of *Microcom-*

puting. Send a letter describing how you use a Hayes Chronograph to me at PO Box 691, Herndon, VA 22070. Your applications should be real and practical, not simply nice ideas. Include any programs or technical descriptions you care to send. I will be the sole judge, and the only person who is ineligible for this contest is my wife.

With the Utilities

I have often compared the contest between the two major consumer information utilities, Source and CompuServe, as a race between two swimmers in a pool. Source has a wild stroke, but they are flashy. CompuServe has a steady pace, but they are less innovative. Keeping with that analogy, Source recently attempted to change strokes and managed to run into the wall in the process.

**The Source has
run into a wall.
Their mail system
is so full of bugs
that it's unusable.**

In August, the Source sent out several things in the mail to their 20,000 subscribers. One was a very well done revision of the Source User's Manual. If you didn't get it, you should check on it. The second item was a notification of a rate increase. Their 300-baud service has gone up to \$7.75 an hour during the most commonly used weekend and evening period. The third item was a description of their new mail system. It wasn't made perfectly clear, but the change in the mail system seems to be linked to a move into their own computers in Virginia from the leased systems they have been using in Maryland.

As this is being written at the end of August, the Source has run into a wall. Their mail system is so full of bugs that it's unusable. The slow response time of the system is made all the more painful by the knowledge that you are paying more per minute for the privilege of watching a blinking cursor.

I consider myself to be a professional in the area of software implementation and software transition on mainframe systems. If I gave the quality of service to the customers I support that we are receiving from the Source, I would expect to be fired. I hope I am judging them too harshly and perhaps they will recover when

they complete the actual move in September, but so far, their transition plan is a cement block causing them to sink to the bottom of the pool.

In the other lane, CompuServe isn't totally perfect. They still have not fielded a friendly electronic mail system. But their E-Mail does do everything they say it will and if you read the instructions in the magazines and manuals, take lots of notes and practice, you can make it work nicely and quickly. In all other areas, they just keep on stroking. If you are a pilot and have an RNAV-equipped airplane, you should check out their new Great Circle Route flight planning program. It's a very practical time saver!

Attention, Atari

Atari users, your time has finally come. I have received a very good smart terminal program for the Atari 800 and 400 systems. The name of this program is T.H.E. Smart Terminal. It is distributed by Binary Computer Software, 3237 Woodward Avenue, Berkley, MI 48072. At \$49.95, this program is reasonably priced.

T.H.E. Smart Terminal comes on either tape or disk. It has powerful disk commands, but it also allows tape users to capture received data and save it on tape. Tape users can create and save customized configurations of the program to work with various message systems or information utilities.

The minimum system needed to run this software includes an Atari 800 or 400 with 16K of memory (the more memory, the bigger the buffers), a cassette recorder or disk drive, the Atari 850 interface and a modem. The program will send commands to a Hayes Smartmodem, but it will not control the DTR signaling lines needed to use an autodial modem such as the Atari version of the Microconnection.

T.H.E. Smart Terminal maintains separate input and output buffers. The contents of a file recorded on a disk or cassette can be stored in an output buffer until you are ready to send it out to the system on the other end of the line. The output buffer could be used for long messages or for short blocks of characters such as auto-dialing instructions for a smart modem or a sign-on sequence for an information utility. While the computer is holding the output data, it can save incoming data into a separate buffer. The input buffer can be written out to tape or disk at your convenience or when it becomes full.

The author of this software package did not provide any capability for prompted transmission of the stored data. It is transmitted in a solid stream. You can pause transmission by returning to the main menu, but this is an awkward way to regulate the data flow. This kind of data dump without any pause or throttling can overload some

message systems and transmission utilities. The program could be significantly improved in this area.

T.H.E. Smart Terminal makes good use of the capabilities of the Atari systems. The special-purpose start, select and option buttons are used to call the menu, send data and enter a command without going to the menu. The program informs you it is saving the displayed data by presenting it in reverse video. It wraps lines that are too wide for the screen, but does so by breaking words instead of wrapping at a space.

The program has a unique method of selecting the various transmission options such as baud rate, word length and parity. The options are each assigned a numeric value on a menu. You add up the value of the options you want and enter the total at the bottom of the menu. Since each combination has a unique value and there are only a few valid combinations, the jobs of both the programmer and user are made much simpler.

T.H.E. Smart Terminal isn't up to the level of Omniterm for the TRS-80 or the ASCII Express for the Apple II, but it doesn't cost as much either. It represents a good value for the Atari user wanting smart terminal communications software at a reasonable price.

Hayes Communications Software

Hayes Microcomputer Products apparently has decided to round out its communications line by offering programs to interface Hayes' modems with various computers. The first program HMP has released is the Hayes Terminal Program integrating the Apple II and the Micromodem II. Other software is expected to follow for CP/M and MS DOS (PC DOS) machines and the Smartmodem devices.

The Hayes Terminal Program is a solid, no-frills, smart terminal package. It allows full control over the modem commands (built into the Micromodem II firmware) directing the modem to originate a call, answer a call and hang up the line. It also provides for saving incoming captured data in disk files.

The Hayes program provides a good degree of throttling of the data throughput. Throttling is a method of inserting a finite amount of time between each transmitted character. This reduces the overall efficiency of the transmission, but it is needed on certain data carriers and overloaded computers not able to take a continuous full-speed data dump. Throttling is a necessary part of a serious file transmission program.

The Hayes Terminal Program provides three different ways of transmitting disk files. File data can be transmitted using a start/stop, line prompt or error detection protocol. The start/stop protocol can be used for a straight data dump (with throttling) or for systems using CTRL-S and CTRL-Q to stop and restart the data stream. These codes are

standard in the industry, but they can be redefined in the program if you run into a system using a different set of signals to control the data flow.

The line prompt mode is valuable for transmitting to a system like an ABBS that has to pack strings or do disk or I/O work at the end of each transmitted line. These systems usually send a specific prompt when they want the next line to be transmitted. They want your system to wait until the prompt is sent. Data transmitted before the prompt probably will be lost. Some programs handle this kind of transmission with a simple wait loop at the end of each line, but the better programs actually allow you to define the character they should look for before transmitting the next line. The Hayes terminal package is one of those good ones allowing definition of the prompt.

Finally, you can select a protocol file transfer mode. This mode can only be used with another Hayes Terminal Program at the other end. The programs at each end calculate a numeric value for each 1024 byte block of data as it is transmitted. If the values don't match, the block is retransmitted. This kind of protocol file transfer is very reliable. When Hayes releases the program packages for the other computer systems, the protocol file transfer will provide a good way to move files from one kind of machine to another.

The Hayes Terminal Program is menu-driven and easy to use. The number of menus is limited to what is practical and they do not form a maze for the user to work through, as some other menu-driven programs do. The program will work with the common 80-column display cards for the Apple II. It will also provide translation of keyboard characters so you can generate the characters Apple didn't put on the keyboard, such as the right and left brackets needed by many file systems.

This program for the Apple II is unique in that it will operate under Apple DOS 3.3, Pascal or CP/M. The distribution disk contains a routine able to boot up the computer and install the program on a disk properly formatted for the operating system in use. Installation is simple and fast and you can change the program to fit all of your operating environments.

The Hayes Terminal Program lacks the telephone number lists, macro command tables and fancy bells and whistles found on other communications programs. Users can write programs in Basic to add the desired operational luxuries to the sturdy structure Hayes has provided.

The Hayes Terminal Program is available either with the Micromodem II or as a separate package. See it at your computer dealer or contact Hayes Microcomputer Products, 5835 Peachtree Corners East, Norcross, GA 30092, for more information. □

LETTERS TO THE EDITOR

Atari Owners, Stop Rejoicing

I'm sorry to disappoint Michael Reichmann, (*Microcomputing*, August, "Atari Owners Rejoice," p. 23) but his Atari computer with Atari Microsoft Basic is not five times faster than the IBM PC, nor is it nine times faster than the Apple II. I believe, in fact, that it is a bit slower than both of these computers. The problem with his timing comparisons stems from the meaning of the RND(X) function in Atari Microsoft Basic (AMB), which differs from that of the Apple II and (I assume) the IBM PC.

In AMB, this function delivers a random number between one and X, which in Mr. Reichmann's program was a one. In other words, every number in his array was the same because RND(1)*NN always evaluates to be NN.

This means that the list started out in a sorted order and required only one pass through to verify this. My Apple performs this same trivial sort in 42 seconds, about 12 percent faster than Mr. Reichmann's Atari using AMB. To get a more valid speed comparison using AMB, the RND term should be something like RND(NN).

Furthermore, using RND functions to generate the list to be sorted is not the best idea when making speed comparisons. I can get up to a 20 percent timing difference on my Apple II just because of the difference in the random array elements used. It is more conclusive to compare computers using the same set of elements. To this end, I changed line 70 to be 70 A(I)=I. With this revision, my Apple sorted 500 numbers in 42 seconds. This is the trivial condition in which all the numbers are already in sorted order.

Then I changed line 70 to be 70 A(I)=NN-I. This totally out of order 500 number list was sorted in 105 seconds. Finally, I changed line 70 to be 70 A(I)=I*((-1)^I) to alternate the sign of each element in the list.

This last list of 500 numbers was sorted in 315 seconds on my Apple II. I suggest that your readers use these three specific conditions to compare their own computers with the Apple. The program used should be as identical as possible to that listed on page 23 of the August issue of *Microcomputing*.

Atari Microsoft Basic really is a fine product. The number of major computers using some form of Microsoft Basic is testimony to this fact. However, sometimes it's tricky to compare one computer to another.

Craig Peterson
Santa Monica, CA

Reply:

Mr. Peterson's response to my letter in the August 1982 issue of *Microcomputing* is correct in pointing out that the speed discrepancy between the Apple and the Atari is not as great as indicated. My figures for the Apple were derived from a previous letter to the editor, not from independent verification.

Mr. Peterson points out that his Apple does the 500 number sort as listed in 42 seconds, but then proceeds to indicate that a more "conclusive" comparison would be to change line 70 to 70 A(I)=I. This also produces a run of 42 seconds. How is this "more conclusive"?

Though the RND function in AMB does indeed work as Mr. Peterson indicates, when line 70 is changed to his new form, the Atari also produces an identical run about 47 seconds.

Performing the other two variations proposed produces comparable times of 123 seconds and 371 seconds.

Michael H. Reichmann
Toronto, Canada

New Z-89 Skips a Step

Thank you for publishing the excellent article by Steve Howard, "Beat the High Cost of H88/89 Memory Expansion (August 1982, p. 80).

I made the modification to my wife's computer, and it didn't work at first. The symptoms were that the H-89 died well before booting, the reset key would not work more than once out of 10 tries, and the ROM memory test would not work, but lasted long enough to declare the 32K.

Eighteen hours and two heart attacks later, we discovered that for her late model Z-89 the ORG 0 CP/M mod has been made internally on the board, so for this machine you should not do the step in Steve's article that says "... connect a wire from pin 17 of the left expansion bus (P509) to the middle pin on JJ503. Discard the jumper plug that was on JJ503; it's no longer needed."

Instead, for these late-model Z-89's, do not connect the wire, and leave the jumper plug on JJ503 setting B (the right two pins). After clipping the jumper wire and replacing the plug, her computer worked just fine with 64K.

Dr. Jim Gillogly
Topanga, CA

Reply:

Since I submitted my article "Beat the High Cost of H88/H89 Memory Expansion," I have discovered some circuit board changes made to the Heath H/Z-88/89 CPU board.

As was correctly stated by Dr. Gillogly in his letter, the modification as written does not apply to the newer CPU boards. However, it is easily clarified.

On any CPU with the part number 85-2549-1 or higher, simply do not install the jumper to pin 17 to enable CP/M, and leave the connector on JJ503 on the two right-most plugs.

This simple change to the original article should take care of any problem encountered with the newer CPU boards.

Steve Howard
Cottage Grove, MN

A Good Price will Stop Theft

In response to your remarks on software thieves (Publisher's Remarks, September 1982, p. 24):

I understand your position about stolen programs and many groups, either user's groups or dealers, giving away copyrighted materials.

However, I do not understand the justification for the prices charged for the software that is available. I purchased Charles D. Sternberg's books "Basic Computer Programs for Business" Vols. I and II for a total of \$24.80. By using the programs presented in the book I was able to get a good mailing list, amortization, simple bookkeeping, an appointment calendar and an inventory control program that serves my needs. The same programs from the software houses would have cost nearly \$800.

If the software houses wish to stop having programs stolen they first must present a quality program that has a good price, options to work on many systems with various printers and good manuals so that the full use of the program can be realized. Also, most importantly, they must answer inquiries with decent literature so that a prospective buyer can see what the program can do for him. Perhaps manufacturers should not sell the manual only; this seems to say "OK, if you can get a copy of my program I'll sell you the manual."

Ronald B. Moss
Brandon, FL

Copyright: Right to Copy?

Yes, we support your efforts to cut software theft.

In our store, we seldom sell more than a few of the new programs out; the rest are seen around town in the form of bootleg copies.

We sell one copy of an educational program to a school district and all of a sudden, magically, there are copies in every school for every computer in that district!

It is a frustrating and unprofitable situation! And, for those of us who take the time to write good software, it is quite a loss of revenue when there are so many copies of the "copyrighted" programs around (does copyright mean the right to copy?).

Michael Jaret
Appletree Studio
DeKalb, IL

Pascal and Basic Duel On the Same Computers

Your Basic vs Pascal article (April 1982, p. 140) and the follow-up (August 1982, p. 22) are still in urgent need of a set of consistent timings. The intention of the article by John Sommer was excellent—to use established benchmark programs for the purpose of comparing the speed of Pascal and Basic. However, the computer timings that you have published so far have failed in this purpose. The reason is that there are significant extraneous factors that vary between your timings. In all of your timings, you have never shown both Pascal and Basic operating on the same computer!

Analysis of benchmarks can be complex, yet readers may be interested in the following table of timings. Incidentally, the benchmarking of hardware (micro vs micro) is also valid and of great interest—in fact, the timings you have published so far for MBasic show significant differences between microcomputers.

The timings in Fig. 1 (all scaled for

K=10000) were executed on the same computer! Televideo TS802H (Z80, 4Mhz, CP/M 2.2). The second table shows timings from your August issue (plus TRS-80 Model II) that tend to show differences between computers. I've included a Benchmark #8, which is the Shell Sort that is discussed in the August 1982 and June 1982 issues.

Steve Rothman
Glenwood, NM

COCO Can Go

While browsing through the June issue of *Microcomputing* magazine, I was intrigued by the Martin Oakes letter (p. 22) regarding the speed of the IBM PC against the Apple II. What a joy for me to see comparisons of this type, because it gives me the opportunity to compare the TRS-80 Color Computer with other machines.

I don't want to make Mr. Oakes feel bad, but the COCO beats the IBM PC on all three counts.

I'm still a little confused by what line 70 of Mr. Oakes' program does. In TRS and Texas Instruments Basic it does nothing but create the same number. Substituting the letter "I" for the number "1" solved the problem and generated the appropriate number of random numbers.

Times cranked out by the COCO on the average were:

200 Numbers in 55.3 seconds vs. the 64 for IBM

300 Numbers in 100.7 seconds vs. the 106 for IBM

500 Numbers in 248.8 seconds vs. the 266 for IBM

The COCO beat the IBM by very little, but just remember the COCO with 4K RAM has been selling recently for \$299. So if speed is what you're after, you should look at the COCO with 6809 MPU with a little more respect. Even with 32K RAM it can be purchased many places for just over \$500. I have never seen a

quoted price on IBM or Apple II in that range.

Garrett E. McGowan
Hopewell, VA

Reply:

I think you make a valid point: the speed of a computer has very little to do with cost or size. I'm off to my Sinclair ZX81 to see how it compares. . . .

You asked if RND(1) should have been RND (I)? The best answer is neither. In the version of Microsoft Basic used by the IBM PC, RND(x) is the general call. "X" is the seed for the random function. To reseed the function, "X" should be negative. However to produce a different series "X" must have a different value each time RND is called.

As written, the program always generates the same series. This did not matter for timing a shell-sort, but it would have been better to have produced a different series each time the program ran. This could have been accomplished by using the system clock to change the value of "X" each run.

```
54 LET X=VAL(RIGHTS(TIMES,2))
55 RANDOMIZE(X)
70 A(I)=RND*NN
```

Martin Oakes
Freeport, IL

Typo in Micro Quiz

When my answer of seven to September's Micro Quiz (p. 7) did not match the answer given, 10, I quickly checked the analysis on page 15. This led to the obvious conclusion that there was a typographical error in the third line of the algorithm. For those of you who do not have that issue handy, here's how the algorithm appeared:

```
N=4
FOR I=0 TO N-1
  FOR J=J+1 TO N
    PRINT "MICRO"
  NEXT J
NEXT I
```

The third line should have read:

```
FOR J=I+1 TO N
```

to agree with the analysis on page 15 and give an answer of 10.

I have to say that the Micro Quiz is one of the first things I look at when I receive a new issue of *Microcomputing*. I enjoy testing my programming abilities. Keep the quizzes coming!

Robert E. Paehr
East Islip, NY

Reply:

Mr. Paehr is correct. As many of our readers have noticed, the third line should have read:

```
FOR J=I+1 TO N
```

Fig. 1. These timings (all scaled for K=1000) were executed on the Televideo TS802H. In second table are timings from the August *Microcomputing* (Letters to the Editor, p. 22).

Micro Software Digest

Compiled by Dan Muse

Micro Software Digest presents a collection of capsulized software reviews from various computer-related publications. Beginning this month, Micro Software Digest will be presented in an index-card format; so read on and clip and keep your favorites.

Z80

ScratchPad Version 2.1

System Requirements: Z80-based system, CP/M operating system, 48K RAM, 8-inch, single-density disk, standard 80 x 24 terminal, printer

Manufacturer: Supersoft, PO Box 1628, Champaign, IL 61820
Price: \$295

Comments: ScratchPad is a new electronic worksheet program. One of the most important features of the program is its "virtual memory." This memory-management technique "automatically monitors and exchanges the limited RAM space with disk space," the review says. "As a result of this feature, users gain a larger effective memory for processing," according to the review.

"Fundamentally, ScratchPad seems aimed at the shirt-sleeve working environment—that is, for users who demand entry simplicity and fast answers," according to the review. Reader Service number 420.

(Reviewed in InfoWorld, September 6, 1982)

CP/M SYSTEM

The Wedge

System Requirements: CP/M system, CP/M 2.2x (or MP/M); 56K RAM, two disk drives, 250K each, CRT terminal with addressable cursor

Manufacturer: Systems Plus, Inc., 1120 San Antonio Road, Palo Alto, CA 94303
Price: \$295

Comments: "The Wedge, Version 1.0, is an electronic-spreadsheet package, primarily for business and financial use, with extensive help and teaching facilities built in," the review says.

"Once installed, The Wedge is extremely easy to learn to use. The package provides six lessons for the new user that introduces all of the program's basic functions," the review says.

The program is designed for new users with no technical background. "For the experienced user, the program provides many advanced screen-display and report-generating facilities," according to the review.

The Wedge appears to "do what it does very well," the review says. Reader Service number 421.

(Reviewed in InfoWorld, September 6, 1982)

8080, 8085 OR Z80

The Formula

System Requirements: 8080-8085-, or Z80-based system, CP/M, 58K RAM, dual-floppy drives, double-density eight-inch disks for GAS, 5 1/4-inch disks for CBS, printer 80 or 132 columns

Manufacturer: Dynamic Microprocessor Associates, 545 Fifth Avenue, Room 602, New York, NY 10017
Price: \$595

Comments: "The Formula allows you to create your own book-keeping inventory or accounting system just the way you want them," the review says.

The Formula consists of three programs that run under CP/M: CBS (Configurable Business System), GAS (General Accounting System) and the Formula (Free Formula Report Module).

These three programs, and their interrelationships, are complex. "You need to study the manuals, and test the accounting programs," the review says.

"The programs are limited to data processing, but they are more than satisfactory for developing a system to handle your data," the review says. Reader Service number 413.

(Reviewed in InfoWorld, August 16, 1982)

8080, Z80, OR 8085

Software Tools for CP/M

System Requirements: 8080, Z80 or 8085 system, CP/M 2.2, 56K RAM (64K recommended), two eight-inch floppy disk drives.

Manufacturer: Unicorn Systems, 30261 Palomares Road, Castro Valley, CA 94546
Price: \$265 (object code); \$325 (source code)

Comments: "The design of the Software Tools is excellent," the review says.

"The Software Tools is basically a programmer's development system with advanced capabilities," according to the review.

"After you come to terms with nine object-program disks, and the problems of keeping them organized, using the tools is easy," the review says.

The user should be familiar with CP/M and computer systems in general, the review says. Reader Service number 411.

(Reviewed in InfoWorld, August 9, 1982)

EDUCATORS—Tired of giving endless instruction on computer usage to your students? Use a **3G Light Pen**, bypass the keyboard and interact directly with the screen. End typing errors!

APPLE

Write Away

System Requirements: Apple II or Apple II Plus, 48K, one disk drive; Recommended: modified shift lower-case adapter, 80 column card, second disk drive

Manufacturer: Midwest Software Assoc., PO Box 301, St. Ann, MO 63074

Price: \$175

Comments: Write Away is a versatile word processor that provides a variety of levels of capability. "Terminology and procedures are quite similar to DEC's PDP word processing software," the review says.

"The expandability is excellent. If one is familiar with DEC procedures, learning time is near zero," the review says.

"Very little can be found wrong with this program," the review says. Reader Service number 424.

(Reviewed in Micro, September 1982)

APPLE

Absolute Security

System Requirements: Apple II or II Plus, DOS 3.3, 48K RAM, disk drive with controller, D.C. Hayes Micromodem

Manufacturer: Dann McCreary Software, PO Box 16435, San Diego, CA 92116

Price: \$79.95

Comments: "If you are concerned about the privacy of your file transmissions over public telephone lines, this package will help solve the problem," the review says.

"Absolute Security provides the utilities necessary to create, encode and send messages to another Apple computer via the Micromodem II," the review says.

"Encoding and decoding messages with Absolute Security is not difficult, but it is a time-consuming process," according to the review. Reader Service number 422.

(Reviewed in InfoWorld, September 6, 1982)

APPLE

Munch-a-bug

System Requirements: Apple II Plus with 48K

Manufacturer: Southwestern Data Systems, 10159-I Mission George Road, Santee, CA 92071

Price: \$49.95

Comments: "Munch-a-bug provides a variety of capabilities to aid in debugging assembly-language programs," the review says. "Assembly-language programming is greatly eased with this product," according to the review.

"A particularly valuable capability is the next command which allows tracing but ignores JSRs," according to the review.

Munch-a-bug is designed for experienced assembly-language programmers, the review says. Reader Service number 427.

(Reviewed in Micro, September 1982)

APPLE

PenultiCopy

System Requirements: Apple II or Apple II Plus, DOS 3.2 or 3.3, 48K RAM, one or more disk drives

Manufacturer: ALF Products, Inc., 1448 Estes, Denver, CO 80215

Price: \$34.95

Comments: "PenultiCopy enables Apple II users to rapidly and accurately copy virtually any DOS 3.2 or 3.3 formatted disk," according to the review.

"PenultiCopy is a high-performance disk-copying program, clearly designed for commercial disk copying or duplicating," the review says.

"All things considered, PenultiCopy delivers the performance promised," the review says. Reader Service number 416.

(Reviewed in InfoWorld, August 23, 1982)

APPLE

Amper-Magic

System Requirements: Apple II or Apple II Plus with 32K, Applesoft in ROM or language card and one Disk II with DOS 3.3

Manufacturer: Aurora Systems, Inc., 2040 E. Washington Ave., Madison, WI 53704

Price: \$75

Comments: Amper-Magic is "a menu-driven utility program that allows machine-language subroutines to be added to Applesoft programs," the review says.

The program "provides a convenient way to package ampersand routines and Applesoft programs together," according to the review. "Many options are provided for ease of use. For example, any table of subroutines created for use by one program may be saved in a binary file and used as a unit in any other program desired," the review says.

No knowledge of machine language is needed to use Amper-Magic, according to the review. Reader Service number 425.

(Reviewed in Micro, September 1982)

APPLE

Combined Enhanced Graphics

System Requirements: Apple II or Apple II Plus with Applesoft, DOS 3.3, 48K RAM, one disk drive, printer

Manufacturer: Computer Station, Inc., 11610 Page Service Drive, St. Louis, MO 63141

Price: \$54.95

Comments: "This is a well-done, efficient utility program that gets the job done at a fair price," the review says.

"This program, as the name implies, combines the features of their previous programs with some new ones."

The most striking feature of the program is the list of supported printer-interface cards and printers, according to the review. "It would be easier to list those printers that are not supported by the program," the review says. Reader Service number 414.

(Reviewed in InfoWorld, August 16, 1982)

MED SYSTEMS SOFTWARE

Med Systems now offers some of the finest professional software available today. More complete information is available in our full page ads in '80 *Microcomputing*, or by calling our toll free number.

PROFESSIONAL/SCIENTIFIC WORD PROCESSING

Qwerty 3.0 offers more features than any Scripsit patch available today. Like Greek letters. Over 75 new symbols. Page end indication. Footnotes. Simultaneous superscripts and subscripts. User-controlled cursor speed. Two and three column formats. Qwerty 3.0 requires at least one disk, a TRS-80 Model I or Model III, and Scripsit. \$49.95

STATISTICAL PACKAGE FOR MICROCOMPUTERS (SPM)

SPM, written by Bruce Powel Douglass, is one of the finest statistics packages available for the TRS-80. It includes descriptive statistics, one and two way analysis of variance, single and multiple variable linear regression, and single and multiple non-linear regression. Requires a TRS-80 Model I or III with disk. \$89.95

WE GUARANTEE SATISFACTION!

When ordering, please indicate Model I or Model III, and number of disk drives in your system.

SARGON II** is a trademark of Hayden Book Co.

Z-80 Users You Can Use TRS-80* Software

We offer an assembled hardware interface which we guarantee will load data from TRS-80* cassettes into any Z-80 based system. (Except sealed units.) The documentation explains how to patch the TRS-80* software to your system. In fact you can virtually change your Z-80 machine into a TRS-80* without making a single hardware change. The documentation also includes an example of patching SARGON II** into a Z-80 system.

The price is \$30 or FREE with the purchase of an assembled compuprism or super compuprism unit.

A-D, D-A Board

S-100 board provides 16 channels of analog to digital input and 8 channels of digital to analog output. With on board kluge area. Total cost of board and parts less than \$120. Bare board with documentation \$45.

APPLE

GPS Professional Version 1.0

System Requirements: Apple II with game paddles or joysticks, DOS 3.3, 48K RAM, one or two disk drives, printer, 16K RAM card, Apple Graphics Tablet

Manufacturer: Stoneware Inc., 50 Belvedere St., San Rafael, CA 94901

Price: \$99.95 (professional version), \$59.95 (standard version)

Comments: "GPS (Graphics Processing System) is a powerful program that facilitates the creation of computer graphics; users do not need to have any programming skills if they want to create high-resolution graphic pictures with it," the review says.

"The software is good, but it cannot make drawings for you," the review says. Practice is necessary if you want to create high-quality graphics, according to the review.

"For individuals who possess immense patience rather than artistic ability, the Graphics Processing System will be of interest," the review says. Reader Service number 419.

(Reviewed in InfoWorld, August 30, 1982)

APPLE

The Organizer

System Requirements: Apple II, Apple II Plus, two disk drives
Manufacturer: Conceptual Instruments Co., 4730 Warrinton Ave., Philadelphia, PA 19143

Price: \$250

Comments: The Organizer contains those functions which will be valuable to the executive—for example: a note generator, a small filing system, a programmable calculator, a clock and an appointment calendar.

"The neat thing here—the thing that makes this program really interesting—is the interlinking of each of the program segments with all the others," according to the review.

"There are other features," the review says. "For example, the program handles tasks normally assigned to an operating system, like maintenance of directories; formatting of disks; copying disks; communications with I/O and mass storage devices; and error detection and recovery," according to the review. Reader Service number 417.

(Reviewed in Personal Computing, September 1982)

IBM

EasyPlanner

System Requirements: IBM Personal Computer

Manufacturer: Information Unlimited Software, Inc., 204 Marinship Way, Sausalito, CA 94965

Price: \$195

Comments: "EasyPlanner has the power of many spreadsheets combined in one," the review says. "It gives the user the ability to divide a planning task into easily manageable segments, and to devote a spreadsheet to each," according to the review.

"Spreadsheets are printed in a versatile format by merging EasyPlanner with the EasyWriter II program. . ." the review says.

A toll-free number is provided to help the user solve any problems or assist with individual applications. Reader Service number 418.

(Reviewed in Personal Computing, September 1982)

IBM

The Speed Reader

System Requirements: IBM PC, PC DOS, 64K RAM, one disk drive

Manufacturer: Davidson & Associates, 6069 Groveoak Place #14, Rancho Palos Verdes, CA 90274

Price: \$74.95

Comments: "The Speed Reader has some features that make it a useful educational tool," the review says.

It makes "good use of the microcomputer to help train your eye movements and improve your overall reading abilities," the review says.

The main menu consists of eight items: two warm-up exercises, three reading lessons and three items called Change Screen Display, Stop For Now and Run Demonstration Program.

"If you already own an IBM PC, this package allows you to expand its uses," according to the review. Reader Service number 415.

(Reviewed in InfoWorld, August 23, 1982)

COMMODORE

PAL (Personal Assembly Language)

System Requirements: Versions available for all Commodore computers except the Basic 1.0 PET; printer and Commodore disk or tape optional

Manufacturer: Brad Templeton, 271 Westcourt Place #201, Waterloo, Ontario N2L 2R8, Canada

Price: \$50

Comments: "PAL is a complete 6502 assembler, entirely in machine language," the review says. "Its syntax is like that of Commodore's own assembler, except that it uses ordinary program files instead of sequential data files," according to the review.

"PAL is extremely simple in concept, flexible in use and powerful in skilled hands," the review says. It occupies only 4K bytes of memory, and it may be placed in EPROM leaving even more memory free, according to the review.

The user must be familiar with Basic's screen editor and 6502 assembly language. Reader Service number 426.

(Reviewed in Micro, September 1982)

COMMODORE

The WIZ Database Manager

System Requirements: CBM 8032 or 8096 computer with 8050 disk drive. CBM or ASCII printer optional

Manufacturer: Dr. Daley Software, Water Street, Darby, MT 59329

Price: \$495

Comments: The WIZ is a data manager that handles vastly larger numbers than competing programs, the review says. The program also includes built-in plotting, screen input editor, programmable arithmetic and simple report handling.

The WIZ "includes a listing to allow reading and writing its data from other programs, and can jump from itself to other user programs. Better yet, it can read in data from sequential disk files, avoiding retyping when upgrading from a lesser data package," the review says.

"Beginners should be able to use this package effectively," according to the review. Reader Service number 423.

NORTH STAR, CPM

Magic Typewriter

System Requirements: North Star system, CP/M, 47K RAM, one double-density 5 1/4-inch disk drive, printer

Manufacturer: California Digital Engineering, PO Box 526, Hollywood, CA 90028

Price: \$175

Comments: "Magic Typewriter is a word processor written in Z80 code for CP/M and the North Star system environment," according to the review.

"Magic Typewriter can merge two or more files, construct form letters, provide left- and/or right-margin justification, centering, odd-even page headings and page numbering," the review says.

"There are no unusual function keys or cursor-control keys for you to learn. This operational simplicity is a strong point," according to the review.

"The price of this product might lead one to expect more features. For example, it would be nice to see an automated method of generating tables of contents, indexes and footnotes," the review says. Reader Service number 412.

ATARI

Basic A +

System Requirements: Disk drive, at least 32K of RAM.

Manufacturer: Optimized Systems Software, Inc., 10379 Lansdale Ave., Cupertino, CA 95014

Price: \$80

Comments: "In effect, Basic A+ is an extension of Atari Basic, adding a multitude of commands and improving others," according to the review.

"Basic A+ adds DOS commands to Basic, making disk handling by a program much easier," the review says.

"Basic A+ is a feature-packed, easy-to-use language. The scope and range of Basic A+ makes it a truly professional language, worth the consideration of any serious programmer," the review says. Reader Service number 410.

Wayne Green Books

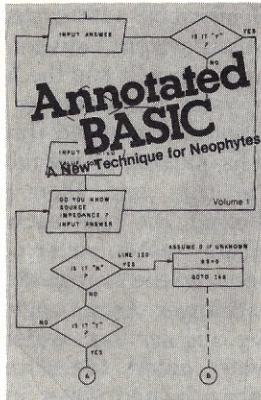

NEW
ARRIVALS

TEXTEDIT

a complete
wordprocessing
system in kit
form.

by
Irwin Rappaport

A WAYNE GREEN
PUBLICATION

TEXTEDIT—A Complete Word Processing System in kit form

by Irwin Rappaport

TEXTEDIT is an inexpensive word processor that you can adapt to suit your needs, from writing form letters to large texts. It is written in modules, so you can load and use only those portions that you need. Included are modules that perform:

- right justification
- ASCII upper/lowercase conversion
- one-key phrase entering
- complete editorial functions
- and much more!

TEXTEDIT is written in TRS-80* Disk BASIC, and the modules are documented in the author's admirably clear tutorial writing style. Not only does Irwin Rappaport explain how to use TEXTEDIT; he also explains programming techniques implemented in the system. TEXTEDIT is an inexpensive word processor that helps you learn about BASIC programming. It is written for TRS-80 Models I and III with TRSDOS 2.2/2.3 and 32K.

Annotated BASIC—A New Technique for Neophytes.

BASIC programming was supposed to be simple—a beginner's programming language which was so near to English that it could be easily understood. But, in recent years, BASIC has become much more powerful and therefore much more difficult to read and understand. BASIC simply isn't basic anymore.

Annotated BASIC explains the complexities of modern BASIC. It includes complete TRS-80* Level II BASIC programs that you can use. Each program is annotated to explain in step-by-step fashion the workings of the program. Programs are flowcharted to assisted you in following the operational sequence. And—each chapter includes a description of the new concepts which have been introduced.

Annotated BASIC deals with the hows and whys of TRS-80 BASIC programming. How is a program put together? Why is it written that way? By observing the programs and following the annotation, you can develop new techniques to use in your own programs—or modify commercial programs for your specific use.

Annotated BASIC Volume 1 contains Projecting Profits, Surveyor, Things to Do, Tax Shelter, Introduction to Digital Logic, Camelot, The Soundex Code, Deduction, Op Amp, Contractor Cost Estimating.

BK7384 \$10.95 ISBN 0-88006-028-X

AVAILABLE NOW!

Annotated BASIC Volume 2 contains Rough Lumber List, Trip Mileage, Flight Plan, OSCAR Data, SWR/Antenna Design, Supermaze, Petals Around the Rose, Numeric Analysis, Demons, Air Raid, Geography Test, Plumbing System Design.

KILOBAUD KLASROOM—

A practical course in digital electronics

By George Young and Peter Stark

Learning electronics theory without practice isn't easy. And it's no fun to build an electronics project that you can't use. Kilobaud Klassroom the popular series first published in Kilobaud Microcomputing, combines theory with practice. This is a practical course in digital electronics. It starts out with very simple electronics projects, and by the end of the course you'll construct your own working microcomputer!

Authors Young and Stark are experienced teachers, and their approach is simple and direct. Whether you're learning at home or in the classroom, this book provides you with a solid background in electronics—and you'll own a computer that you built yourself!

Kilobaud Klassroom contains Getting the Ball Rolling, Gates and Flip-Flops Explained, J.K. Flip-Flops and Clocked Logic, PC Boards and Power Supplies, Hardware Logical Functions, Voltage, Current and Power Supplies, Transistors, Diodes and OP Amps, Pulses and More Pulses, Counters and Registers, Bus Traffic Control, ROM and RAM Memories, I/O Circuitry, Parallel and Serial I/O Ports, Computer I/O III, Computer I/O IV, Computer I/O V, Processor Connections, Finally... The Kilobaud Krescendo, Eproms and Troubleshooting, Expansions and Programming, Machine-Language Programming, Assembly-Language Programming, Connecting to the Outside World.

THE NEW WEATHER SATELLITE HANDBOOK—

By Dr. Ralph E. Taggart WB8DQT—

Here is the completely updated and revised edition of the best-selling Weather Satellite Handbook—containing all the information on the most sophisticated spacecraft now in orbit. Dr. Taggart has written this book to serve both the experienced amateur satellite enthusiast and the newcomer. This book is an introduction to satellite watching, that tells you how to construct a complete and highly effective ground station. Not just ideas, but solid hardware designs and all the instructions necessary to operate the equipment are included. An entire chapter is devoted to microcomputers and the Weather Satellite Station, and for the thousands of experimenters who are operating stations, The New Weather Satellite Handbook details all the procedures necessary to follow the current spacecraft.

Weather Satellite contains Operational Satellite Systems, Antenna Systems, Weather Satellite Receivers, A Cathode Ray Tube (CRT) Monitor for Satellite Picture Display, A Direct-Printing Facsimile System for Weather Satellite Display, How to Find the Satellite, Test Equipment, Microcomputers and the Weather Satellite Station, Station Operations.

ISBN 0-88006-015-8 available now! **BK7383 \$8.95**

Micros—In a New Light

If you've been considering adding solar heating to your home, you'll want to control the system with a microcomputer for maximum comfort and efficiency.

By James A. Gupton, Jr.

Authors's Note: The Basic Controller was originally produced by Dynabyte, Inc. and this product was acquired by Action Instruments Company, Inc. in 1981.

The emphasis on solar energy since 1973 gives the impression that this is a brand new method for heating household water supplies. Actually, homes in southern Florida have used solar water heating systems since the mid-1920s and, of course, we have long used the sun to evaporate sea water in order to obtain salt.

Even as far back as 2000 B.C. people have used the roofs of their houses to collect rain water, which was heated by the sun for laundry and baths. Perhaps the only difference between these earlier uses of solar energy and today's is the cost of installation and control of the system's temperature.

For the past 40 years, electricity has been our cheapest form of energy. So inexpensive has been electricity that our hot water heaters have been

manufactured with only a minimum of heat-retaining insulation. However, today's cost of electrical energy is so high that lower-cost methods for heating are economical to explore.

Roof-type solar cells are practical in supplementing any home's hot water supply. With supplemental fireplace heating, they can heat the home as well.

Adding solar energy water heating to your home can qualify you for federal and state tax credits which could amount to as much as 66 percent of the total cost of the system. This tax credit, plus the annual savings of several hundred dollars in water heating bills, would pay for the system in two to three years.

Nothing could be more timely than to consider adding solar energy heat to your home now. The increased volcanic dust in our atmosphere alone promises colder winters and subsequent higher heating costs.

Fig. 1 illustrates a modified version of the Heathkit NS-1100 Solar Water Heating Kit, which you can install yourself with a minimum of hand tools and for less than \$2300 for a two-collector system. In principle, the Heathkit NS-1100 system is based on a closed system between the roof solar collector cells and the heat exchanger.

Water containing an anti-freeze solution is circulated through the solar cells, picking up the radiant heat from the sun, and then pumped back through the heat exchanger, passing off the heat to water being circulated between the storage tank and the heat exchanger. As hot water is taken from the regular hot water heater, cold water enters the storage tank. This forces heated water into the regular water heater to replace the used-up hot water.

Is such a solar energy water heater practical? On any clear sunny day, as much as 900 to 1000 British Thermal Units of radiant energy is received from the sun on every square foot of your roof. Even on cloudy days enough infrared energy will be received to supplement your hot water supply.

The Heathkit's NS-1100 solar collector cells are rated for 945 BTUs per cell per day. Thus, each cell producing 22,680 BTUs could total as many as 60,000 BTUs for only three collector cells. This is almost 50 percent of the average home's furnace BTU output and more than enough heating capability for the average home's hot water use.

The basic NS-1100 solar water heater is controlled only by temperature, which activates the system's two pumps to circulate water in the closed external solar cell/heat exchanger system and the storage tank/heat exchanger open loop system. However, to expand the solar energy cost sav-

Solar hot air and water system and solarium greenhouse designed and built by Warmrays (Washington, MA).

Address correspondence to James A. Gupton, Jr., 7416-G Pebblestone Drive, Charlotte, NC 28212.

ings to include heating of the home as well as heating of water, a computer

control system becomes practical. Using a fireplace to supplement hot

water heated through the solar energy collector cells starts to complicate control of the system. Normally, the water temperature of a typical collector cell can reach 180 degrees Fahrenheit; the addition of a dual fireplace heat collector system could run the temperature above 212 degrees Fahrenheit.

The basic heat collector for the fireplace consists of the grate collector boosted by a second collector in the flue of the chimney, and unless the system is under pressure, boiling will occur and steam pockets will prevent proper circulation of the hot water to the heat exchanger.

Fig. 1 shows the electrically-operated three-way water valves which are controlled by a computer to regulate the direction of water flow on the solar/fireplace input side of the heat exchanger and the hot water heater/baseboard heaters on the hot water output side.

Referring to Fig. 1 again, when the solar collector is generating hot water for the water heater, valves A and B have normally closed sections closed. In this state, cold water can only enter the storage tank, with heated water in the storage tank passing on to the existing water heater. Valves C and D have their normally-closed section closed—thus the circulation of water/antifreeze solution is between heat exchanger and solar collectors only.

With the fireplace contributing to the heating of water, valves C and D open the circulation paths only to the higher temperature water sources—solar cell or fireplace. When thermostat settings in any individual room call for an increase in temperature, valve B closes to permit pumping of heated water through the house baseboard hot water heaters.

Fig. 2 illustrates the floor plan of an average size home with the addition of baseboard hot water heaters indicated by the letter A. A bypass valve, B, channels the hot water around the baseboard heater when the room's temperature matches the desired thermostat setting. When each room has reached its proper temperature, the baseboard circulation pump turns off and valve B returns to channeling the heated water to the regular hot water heater.

By enclosing a south-facing front or rear porch area with glass, a greenhouse effect is created with sunlight heating the air within the enclosed area. If no porch exists, a glassed-in enclosure can be constructed on any south-facing side of

Photo 1. "Peeled" Apple II shows the seven accessory expansion edgecards across the rear of the computer.

Photo 2. Basic Controller computer system. (Photo courtesy of Action Instruments Company, Inc.)

the building.

Ductwork from the greenhouse section draws heated air into the opposite side of the house, which in turn circulates throughout the house on its passage back to the greenhouse section. This requires the duct fan to run only when more heat is needed.

External sensors anticipate temperature rise or fall in step with increase or decrease in sunlight intensity; the heating system channels hot water through baseboard heaters before normal house heat loss reaches a level where reheating would require ad-

ditional heat above the capability of the solar/fireplace system.

Fig. 3 is still another solar/fireplace system in which the home heating system heats air as it is blown through the heat exchanger. This is characteristic of most gas- or oil-heated home furnaces.

In addition, Fig. 3 includes a micro-computer control system with all valves operating on 12 V dc from a bank of rechargeable lead-acid batteries. Here the batteries are charged by solar cells and a wind-driven generator. This type of solar/fireplace

system will function even when the normal household electrical power has been interrupted as a result of storm-damaged power lines. Remember, no standard heating system can function under these conditions; thus, solar/fireplace heat is far more reliable.

The solar energy heating of hot water for supplementing the existing hot water heater is a simple minor control system.

Add home heating and rechargeable battery-operated systems and you'll need a computer to control the system. By having the heating of your home's hot water and heating of the house in winter controlled by a computer, you'll reduce the cost by maintaining greater efficiency and subsequently higher comfort levels throughout the years.

Selecting a Computer for Solar Energy Control

The typical home in Figs. 1 and 2 would require a computer to control a minimum of 11 valves, three water pumps and the greenhouse duct fan. In addition, a total of 13 temperature sensors would be needed to supply the computer with input signals for system temperature regulation.

The minimum interface requirement to control this solar energy system would be two parallel Input/Output ports containing a total of 16 output and 16 input control signals. A peripheral interface adapter (PIA) would normally consist of two 8-bit registers, A and B, plus two bidirectional driver circuits with either inverting or non-inverting drivers.

Fig. 4 illustrates in schematic how the PIA register A data is transmitted to the controlling relay of a three-way water valve. In the non-inverting driver, a logic 1 (+5 V dc) is transmitted to the base of a PNP transistor which biases the transistor to saturation while developing a positive voltage across the collector's load resistor, which actuates the relay coil.

For an inverting driver, a logic 0 (0 V dc) input produces a logic 1 (+5 V dc) at its output which, when applied to the base of an NPN transistor, biases the transistor to saturation and the collector voltage drops to 0 V dc to turn off the relay coil.

The problem with most popular microcomputers is their lack of provisions and interfaces suitable for external device control. Few, if any, offer additional edgcard connections to add to parallel I/O ports containing a

Rugged, simple, dependable.

RCA Interactive Data Terminals as low as \$349*

Reliable, portable RCA VP 3000 series Interactive Data Terminals feature: video and audio output; color-locking circuitry for sharp color graphics and rainbow-free characters; reverse video; tone and noise generator; 20 and 40 character formats; resident and

programmable character set; LSI video and microprocessor control. All have a unitized 58-key, 128 character keyboard with flexible membrane switches, plus the features of the ASCII keyboards below.

VP 3501 Videotex Data Terminal. (Shown) Built-in RF modulator and 300 baud direct-connect modem. Ideal for time sharing data base applications. Works with standard TV or monitor. Also has expansion interface and 16-key calculator keypad. As low as \$399.*

VP 3303 Interactive Data Terminal. Similar to VP 3501, without modem or calculator keypad. Has selectable baud rates and RS232C/20Ma current loop interfaces. As low as \$359.*

VP 3301. Same as VP 3303, without RF modulator. As low as \$349.*

...and RCA ASCII Encoded Keyboards as low as \$83.*

RCA VP 600 series ASCII keyboards feature: flexible membrane keys with contact-life over 10 million operations; unitized keyboards are spillproof, dustproof with finger positioning overlay and positive keypress; 2-key rollover circuitry; tone feedback; high noise immunity CMOS circuitry; 5V DC operation and 58-key, 128-character keyboard, selectable "upper case only."

VP 616. EIA RS232C compatible, 20 mA current loop and TTL outputs; six selectable baud rates. Standard keyboard plus 16-key calculator. As low as \$133.*

VP 611. Similar to VP 616 with 8 bit parallel output. As low as \$100.*

VP 606. Same as VP 616, less calculator keypad. As low as \$108.*

VP 601. (Shown) Same as VP 611, less calculator keypad. As low as \$83.*

PIA. Those that do offer parallel printer interfaces lack the essential bidirectional operation to receive input control data.

At the present, most practical parallel I/O interfaces seem to be confined to either the S-100 bus computers or the 44 connector edgcard system. California Computer Systems offers an S-100 motherboard with interfacing to the TRS-80 and the Commodore PET microcomputers so that S-100 bus relay control interfaces may be used instead of the parallel I/O interface.

The Apple II Plus microcomputer has built-in provisions for up to seven accessory interface circuit boards. Photo 1 illustrates a "peeled" Apple showing the seven edgcard circuit board connectors across the rear of the computer. Even with dual disk drive units and a line printer, the Apple II still has room to accept up to five parallel I/O interfaces equipped with a PIA or interface to an external S-100

motherboard system.

The Apple II offers still another advantage as a control computer—it has several different languages to develop the complex solar energy control program.

When you select a microcomputer with solar energy systems control in mind, you may find that the Action Instruments' Basic Controller fills your needs. It can sense mechanical contact closures, control electromechanical devices directly, sense and convert analog transducer signals and transform any program permanently on EPROM.

Even the physical appearance of the Basic Controller is different (see Photo 2). It doesn't have the usual case because it's designed to be mounted on a metal rack, not for desk use. Its single board construction contains on-board edgcard connectors for a total of 32 sense inputs, 32 flag outputs and 16 interrupts.

In addition, the Basic Controller contains 16K ROM in which the special Zilog Industrial Basic Language is stored. On-board RAM capacity is 16K with provisions to expand to 64K with off-board circuits. Up to 8K EPROM is available with on-board EPROM storage of programs executed by the simple loading instruction, LIST %7. You can even copy EPROMs by placing an EPROM in socket A and an unprogrammed EPROM in socket B and by entering the PROMCOPY program from the prerecorded cassette.

There are eight on-board relays, four of which have contacts rated from 5 A at 26 V dc to 3 A at 115 V ac. The remaining four are reed relays with a 10 VA contact rating. To provide visual feedback in certain control situations, eight LEDs are positioned on the front panel to indicate an ON or OFF condition to the operator. In addition, the 8-bit parallel I/O port will display the contents of its register by an Off/On status of eight LEDs.

The ZIBL language simplifies the development of control programs. In cases where mechanical contacts of a thermostat are used to control bypass baseboard heaters, the program in ZIBL might be this:

```
IF SENSE (13) = 0 THEN TURNON FLAG 13
DO UNTIL SENSE (13) = 1 THEN TURNOFF FLAG 13
```

In this case, sense 13 would represent the lower temperature limit and would turn off the bypass valve when the temperature caused the grounded bimetal contact arm to break contact, returning a logic 1 to sense input 13.

The Basic Controller has a 24-hour on-board clock, by which time can be used to activate system controls. For example, suppose we are using the fireplace heating system to heat the house at night and we wish to reduce the heat when we retire. The program might look like this:

```
IF TIME = 160000 THEN TURNON SENSE (C), (D), (P)
IF TIME = 220000 THEN TURNOFF SENSE (C), (D), (P)
```

Thus, at 4 p.m., when there is little solar heat being produced during winter, the program would automatically switch the system over to fireplace-generated hot water and keep it on until 10 p.m.

As a complementary feature to the Basic Controller, Action Instruments also offers a complete line of sensors for temperature, pressure, rate of flow of liquids and computer to controlled device transmitters. ■

Give Your TRS-80* a Tremendous Boost with RACET COMPUTES Software

RACET COMPUTES Utility Software makes the TRS faster, more efficient, and easier to use. Our programming aids improve your productivity. Our reputation is for products that are professional in design and work as advertised!!!

FIELD PROVEN HARD DISK DRIVES AND OPERATING SYSTEM

Now you can use RACET's Hard/Soft Disk Operating System (HSDS) with the ARM Winchester Disk Drive on the Model II. This cost effective combination provides 15 Megabytes per drive including ECC Error Correction Code and an advanced sequencer to further ensure data integrity. An incremental backup to floppy is provided so that only those sectors that were changed from the last backup are saved. A full monthly service contract is available at \$30 per month per drive.

The HSDS Software has more than One Year's FIELD Experience. The latest HSDS version adds several enhancements including maintenance of system files on the hard drive, files as large as the disk, the ability to segment the disk as logical drives, definable directory size, and many utilities including bulk copies between floppy and hard drives, multiple purge, Superzap, and Directory Catalog System. Full program compatibility with TRSDOS 2.0a is maintained. Mixed floppy and hard drive operation is supported.

HSDS is available for the Cameo, Cynthia Bull, Corvus, Data Peripherals, and Santa Clara Systems hard disk systems as well as the ARM Winchester Drive.

ARM 15 Megabyte Drive Subsystem \$3895. HSDS Software \$400.
Cameo 5/5 Cartridge Drive \$5995. Cynthia Bull 10/10 Drive \$7995

NEW PRODUCT ★ Model II Fast Backup Utility ★ \$75

5 to 10 times faster backups!!! Full disk backup (including verify) 55 seconds!!! on two drive system — 2:15 on single drive system. In business, time is money, and one BACKUP is worth 1000 tears!!!

NEW PRODUCT ★ INTEGRATED BUSINESS SYSTEM ★

ISAM File Structure — Multi-Company Capability. Modular structure. Each module includes complete user documentation which guides the user through installation and allows "practice" using a sample data base. When ready, the user simply names his data base and begins. The Integrated Business System program set includes General Ledger, Accounts Receivable, Accounts Payable, Payroll, Inventory, General Journal, Asset Management and more.

Business Programs \$250/module Mod III, \$300/module Mod II, \$795 for all four Mod III, \$995 for all four Mod II. General Ledger and Accounts Receivable available now. Accounts Payable and Payroll 1st Quarter 1982.

MICROSTAT® - Release 3.0

MICROSTAT® + baZic® = PERFORMANCE

The best just got better! MICROSTAT has been the leader in the statistics field for microcomputers since 1979, and the new release 3.0 outperforms and is noticeably faster than previous versions. Just a few of the features include:

GREATER ACCURACY

BCD with up to 14 digit precision;

PROGRAM ENHANCEMENTS

Missing data capabilities and many more;

FASTER EXECUTION

Calculation time greatly reduced;

DYNAMIC FILE ALLOCATION

Data can be inserted, added, or deleted;

SPECIAL PRICE:

For a limited time get MICROSTAT plus baZic complete with program disk and documentation for each for \$395.00, save \$50.00!

The MICROSTAT - baZic version requires: a Z80 CPU, CP/M™ and 48K of memory. Available formats: 8" SD disk or 5 1/4" North Star only. Check with your dealer for other formats. Also available for: Microsoft's Basic-80™, North Star DOS and IBM. For more information, call or write:

PICK A SYSTEM!

\$2895
.5MB STORAGE

◀ **COMPLETE** ▶

\$3395
1.2MB STORAGE

We're offering you our SB-80 system in either 5 1/4" or 8" disk drives, your choice. Either way your system comes with a full size (12" diagonal) non-glare tilttable green screen with 24 lines by 80 character format. Its multi-character set offers blinking cursor, underlining, reverse video, and half and zero intensity. The movable, detachable keyboard has a numeric pad with cursor control and function keys.

- Single Board Technology ■ CP/M® Operating System
- 4 MHz Z80A CPU ■ 64K 200ns Main Memory
- 8-Inch Dual Density Floppy Drives
- 5 1/4-Inch Dual Density Floppy Drives
- 2-Serial Ports ■ 2-Parallel Ports
- 4-Counter/Timers ■ Expandable

For further information about this limited offer call or write:

Micros Find a Place Under the Sun

Micros are hot stuff when it comes to collecting and analyzing data on the efficiency and usage of solar hot water systems. This project at the Florida Solar Energy Center used a Commodore 8032 microcomputer.

By Timothy Stryker

Florida is an ideal area for the application of solar energy collection techniques. Except during the rainy season from May through mid-July, cloud cover is minimal, and the latitude of the state provides it with more direct solar rays than any other state besides Hawaii. Naturally, there is little need here for space-heating energy, but even in a warm climate people need hot water supplies for washing clothes and dishes and taking showers.

For this reason, the Florida Solar Energy Center (a division of the University of Central Florida) has undertaken a research project to determine the relative efficiencies, usage patterns and electrical requirements of various residential hot water systems, conventional as well as solar, at various points around the state.

To do this, the Solar Energy Center installed special metering systems in 80 typical residences throughout the state. The 6502-based metering system accumulates electricity usage, water volume usage and BTU (British Thermal Unit) usage data as a function of time. Each metering system also incorporates a 300-baud modem and is tied into a separate telephone line at each house, so that the accumulated data can be remotely accessed every few days by a "master" computer located at the Solar Energy Center.

The goal is to collect a full year's worth of data, at 15-minute intervals, from each house, so that a comprehensive picture of hot water costs as a function of latitude can be obtained, as well as time of year, time of day and system type.

Address correspondence to Timothy Stryker, Samurai Software, PO Box 2902, Pompano Beach, FL 33062.

Photo courtesy of Gulf Thermal Corp.

System Hardware Configuration

The metering system selected was the LPR (Load Profile Recorder) manufactured by Robinton Products, Inc. of Sunnyvale, CA.

This device can accumulate relay contact closure pulse data on up to three channels for up to six days at 15-minute intervals before overflowing its internal RAM memory. It also incorporates a 103-type DAA modem and has built-in power-outage sensing and battery-backup circuitry so that its accumulated data will not be lost or disturbed by power line fluctuations.

Software supplied in EPROM with the unit handles data accumulation, modem communications and time/date maintenance.

Robinton has available a master utility program called ALICE, written in Fortran for the PDP-11, which handles automatic uploading of LPR data, maintaining this data on disk, and various report-generation functions. Robinton wanted a ridiculous amount of money for this program, though, so the Solar Energy Center decided to write its own software for the 6502-based CBM 8032 microcomputer

from Commodore.

The 8032 is a beautiful little machine, ideal for this type of application, with 32K of RAM, a full alphanumeric keyboard and a built-in 80-column monochrome display. Together with the 8050 double-density dual floppy disk drive from Commodore, the TNW-103 auto-dialing modem from TNW Corporation of San Diego, a Model 1001F DAA data coupler from Universal Data Systems of Huntsville, AL, and an NEC Spinwriter, the system provided us with everything we needed for high-volume automated data collection and analysis, at a reasonable price.

Applications Software

TNW Corporation supplies a general-purpose modem-interfacing program called XPTerm-103 that can be used to transfer disk files between Commodore machines and call up remote mainframes. We decided to use XPTerm as a starting point for writing our own LPR data-uploading software. The fact that it is written in Basic made most of this adaptation process very easy, but we ran into a few snags along the way. The snags were due to Basic's speed—or rather lack of same.

The first problem concerned the computation of "block check characters." Telephone lines are notorious for the amounts of noise they introduce into audio signals. For this reason, Robinton chose to implement a full two-byte CRC (cyclic redundancy check) scheme in their modem communications protocols for the LPR.

The CRC scheme, developed by IBM for the purpose of maintaining data integrity in telecommunications, is a relatively complicated scheme involving considerable shifting and XORing of each byte of transmitted and received data. Attempting to carry out these computations in Basic would have taken too much time, so we had to resort to machine language for this process.

None of the people at the Solar Energy Center had had much experience with machine language, so the development of the necessary routines was highly problematic at first—it was at this point that they bit the bullet and called in a high-priced computer software consultant, me.

Once this problem was out of the way, I found that Basic was too slow even to receive data from the LPR on the communications line in real time. Although the modem could be

OPENed from Basic as a device, and Input and Get commands could be issued to it, the lack of buffering in the modem, the sloth of Basic and the peculiarities of the LPR data formats conspired to make it impossible to reliably retrieve data.

Again machine language was needed, this time simply to read data from the modem while checking modem status and timeout conditions. This required some detailed knowledge of the 8032's ROM-resident operating system, which, fortunately, I happened to have available.

However, we encountered one last major problem in this phase of the effort. Once the communications all seemed to be working, I set up the program to transmit the appropriate control codes to the LPRs, and everything seemed to be fine, with one exception: the LPRs would not log data. The program would initialize an LPR and fire up its "load-profiling task." The replies received were all strictly according to Hoyle, except that the data values were always zero.

After we spent weeks of checking and rechecking the hardware—with me poring frantically over the software—a single sentence came over the line: "You have to set location \$0220 in the LPR to an \$80 in order to enable data logging." No hint of this is contained in the LPR documentation. This certainly drove home the point, if it ever remotely needed to be, that complete and well-reviewed documentation is of the utmost importance in determining the value and utility of a commercial electronic product.

Database Management and Analysis

Now that the LPRs were producing valid pulse-counts, we needed some way to examine the data, some way to merge the separate, six-day-long data segments into larger agglomerations and some way to compute totals, averages and other information from the data gathered.

The application was sufficiently unique, and in particular, the volume of data was sufficiently high, so that no existing database management package for the 8032 could be effectively used. We would have to write our own, and so the question naturally arose as to what language to write it in.

Assembly language was out of the question for numerous reasons. Basic could have been coerced into doing the job, but its speed, I knew, would continue to be a problem, and the struc-

ture of the language is such that it is poorly suited for the creation of large, complex data manipulation programs.

Coincidentally enough, I happened to have developed a language called RPL for the Commodore line which combines high speed with a number of features well-suited to the generation of lengthy, involved programs—among them a stack-oriented architecture (like that of Forth); a symbolic, single-stepping, breakpointable debugger; separate compilation capability; and efficient usage of memory space. In addition, RPL uses Commodore's Basic program editor for the editing of its source, which makes the management and updating of its source files far easier than would be the case with, say, Forth.

The first item of business, then, was to allow the raw LPR data files to be merged together into larger, "database" files. Since a year seemed to be the longest time-span of interest, we hoped to be able to fit all of the data for a year, from one house, into a single file. With each of three channels generating a data value every 15 minutes, this worked out to 105,120 data values per house per year.

Since the analysis of this data would require that we be able to pick and choose a data-point here and a data-point there, the organization of the data in a sequential file format was clearly unacceptable. But Commodore "relative" (known elsewhere, usually, as "random-access") files only allowed a maximum of 720 records per file.

What to Do?

The solution was to treat each of the 720 records in a maximum-length relative file as though made up of many subrecords, each subrecord containing 15 minutes worth of data. I then wrote a set of RPL routines that made it appear to their callers as though each subrecord was, in fact, a record unto itself.

This sort of thing is fairly easy to do in RPL, and the speed of the language is such that the resulting programs run considerably faster this way than they would have with the several tens of thousands of separate records that I would have needed to accomplish this otherwise. In this sense, Commodore's 720-record limitation was a blessing in disguise.

Having merged the raw LPR data files, we then needed to be able to review and edit the resulting database files. If I had been writing the program

in Basic or assembly language, this database-editing facility probably would have been limited to a simplistic prompt-driven process ("WHAT DAY?", this, "WHAT TIME?", that, "CURRENT VALUES: so-and-so... CHANGE?", yes or no, etc.). To do more than this in Basic would have taken too long to execute, whereas to do more than this in assembly would have taken too long to code up.

Using RPL, I was able to write a full-fledged database screen editor, virtually from scratch, in about 12 hours. The editor allows the user to view a full 24 hours worth of data at once. The cursor keys may be used to scroll forward or backward an hour, a day or a month at a time, and any change made to the data on the screen automatically causes the corresponding change to be made to the database file on disk. The flashing cursor cannot be moved into illegal regions of the screen—in fact, invalid key inputs of

all kinds are simply ignored.

Most importantly, the scrolling takes place at virtually the full speed at which the disk itself is capable. This makes it very easy for the Solar Energy Center people to maintain full visibility into, and control over, the database at all times.

The ultimate aim of the project is, of course, to derive useful information from the raw data that will be collected. To this end, I now wrote a program to find totals and averages for specified house groups over specified durations of time. At first, the program merely spit out a table of data, averaged, by 15-minute intervals, over the specified house-days.

With the help of Tim Merrigan at the Solar Energy Center, though, this program gradually grew to include average daily totals, overall interval averages, the top three readings from each of the channels and a so-called "coefficient of performance," an

overall measure of how the hot-water systems under consideration performed in terms of efficient use of electrical energy.

Finally, I was able to use the plotting capabilities of the NEC Spinwriter to generate graphic profiles of the average consumption of kilowatt-hours, gallons and BTUs over the course of a day.

Conclusion

The Commodore 8032 is a fine machine in every respect. The 8050 disk drive, while somewhat flaky at times, is nonetheless an outstanding value for the money, and in combination with the 8032 simply cannot be beat.

The modems and software that we purchased from TNW Corporation have performed, without exception, flawlessly. Our data couplers from Universal Data Systems have also quietly worked, from day one, without problem. The NEC Spinwriters we used have been largely trouble-free, except for ribbon-positioning, and this has not cropped up again after having been fixed several months ago. Our Load Profile Recorders from Robinton Products, Inc. have worked reasonably well, the main problems lying, as noted above—ahem!—in their documentation.

The performance of RPL in this project met every demand placed upon it. Although the language is not really designed to handle floating-point or even multi-word-integer quantities, I found it necessary to write only a few specialized routines in assembly language. RPL's use of the Basic screen editor, its high space-efficiency and the power of its debugger combined to make the development of the project software as easy and trouble-free as could be desired.

As proof of this, consider that, since my contract with the Solar Energy Center was on a time-and-materials basis, I kept track of the exact amounts of time I spent on the project. From soup to nuts (including all of the horsing around with the LPR, travel time, phone call time, and so on), the software took just 145 hours.

The overall conclusion that we at the Florida Solar Energy Center have drawn from this project is that today's microcomputers are sufficiently powerful to address many applications heretofore handled only by mini-computers. When potential cost savings are considered, departmental managers may find that a microcomputer-based approach to their computing needs offers the optimal solution. ■

Florida Solar Energy Center Residential Hot Water Project Scaled Averages For The Solar House Group

TOTAL, CHANNEL 1: 23,344 WATT-HOURS ... / 2 HSE-DAYS = 11672 WATT-HOURS

TOTAL, CHANNEL 2: 212 GALLONS ... / 2 HSE-DAYS = 106 GALLONS

TOTAL, CHANNEL 3: 163,000 BTU'S ... / 2 HSE-DAYS = 82,000 BTU'S

AVERAGE BY INTERVAL, CHANNEL 1: 307.16 WATT-HOURS ... X 96 = 29487.36 WATT-HOURS

AVERAGE BY INTERVAL, CHANNEL 2: 2.79 GALLONS ... X 96 = 267.84 GALLONS

AVERAGE BY INTERVAL, CHANNEL 3: 2,140 BTU'S ... X 96 = 205,440 BTU'S

AnnouncingA New, Authoritative Guide to
The Most Important Book Ever Published for the Apple.

What's Where in the APPLE...Plus...the All New Guide to What's Where

is William F. Luebbert's Revised Edition of the famous Apple Atlas. The original *What's Where in the APPLE?* provided more information on the Apple's memory than was available anywhere else. Now the *Revised Edition* shows you how to use this valuable data.

What's Where in the APPLE...Plus... the All New Guide to What's Where

- Guides you — with a numerical Atlas and an alphabetical Gazetteer — to over 2,000 memory locations of PEEKs, POKEs, and CALLs.
- Gives names and locations of various Monitor, DOS, Integer BASIC, and Apple-soft routines — and tells you what they're used for.
- Explains how effectively to use the information contained in the original *What's Where in the Apple?*
- Enables you to move easily between BASIC and Machine Language.
- Guides you through the inner workings and hidden mechanisms of the Apple.

All Apple users will find this book helpful in understanding their machine, and essential for mastering it!

The Atlas and The ALL NEW GUIDE are available in one, 256-page Wire-O-Bound book for only **\$24.95**

Please send me: M982

Welcome to the world of intelligent machines. In this article series, you'll learn to build computer-controlled devices that speak and listen and manipulate their surroundings with consummate skill. It's great fun for old-time hackers and budding builders alike. So grab a soldering iron and enter the future!

By Mark J. Robillard

The Intelligent Toaster

or

Experiments in Computer Control

This is the first of a series of articles that will introduce you to the world of intelligent machines. The smart appliances of today will soon grow into personal robots that will be as essential a tool as the pocket calculator. But for the revolution to begin, experimenters must take up the challenge: We built the personal computer industry and we'll be among the first with intelligent homes.

In this series I'll concentrate on personal applications, and you'll be learning by doing. I'll present hardware together with the software necessary to drive the system.

What's an Intelligent Machine?

or

Does a Toaster Think?

Toasters, as a rule, are not intelligent. On the other hand, a microwave oven is incredibly smart. The new breed of microprocessor-based appliances are intelligent machines. The stereo that turns itself on to record a music program and the refrigerator that tells you when it's defrosting are examples. If micros are what it's all about, then what's so different about these articles?

Today's personal computers are really small software development systems, not sophisticated control centers. If you have to load a floppy disk into your machine to make it do anything, then the machine is not suited for home control. I'm talking about dedicated control computers, each preprogrammed to be expert at each task. If a power outage occurs, your home control system doesn't go south.

About halfway through the series your house will greet you, in whatever language you choose, when you enter, and guard your possessions when you leave. The house will know and be able to report instantly all financial transactions, medical information, energy use or environmental status. If you now live alone, be prepared to accept an intelligent companion.

Home Control

I've been doing a lot of talking about the home. Let's investigate its control possibilities. Enter the kitchen (see Fig. 1). There are two major appliances here that could be monitored. The refrigerator losing its cool could spell disaster—but your personal butler would warn of any problem. The same holds true for your gas range; you might want to know if the pilot goes out before your house unexpectedly remodels itself.

Cooking time and temperature control of the type used in microwave ovens can be added to existing

ranges. The kitchen master computer would choose the correct settings from a table in software when you entered the word "roast" on its keypad.

Meal planning and household food inventory are best done with the kitchen computer. Here the machine could be equipped with bar code input wands to read product codes off the packaged food.

A small CRT shows this week's tentative meal schedule; at the push of a button the day's shopping list is entered into your pocket terminal, which you take to the store. This small version of the kitchen system is intelligent enough to check off shopping list items, record the prices paid and help with planning your day (more on this later).

Could the kitchen have more? You bet! (See Fig. 2.) The CRT terminal in the wall can be switched to display the kids playing out back, or an "area scan" radar-like graphic array can show where they have run off to now. This terminal would employ

AMBER AND GREEN DATA MONITORS • 9" AND 12" 18 MHZ BANDWIDTH

ACI Data monitors offer the discriminating computerist a choice of eye easy AMBER or GREEN phosphors. The 9" (DM-091) and 12" (DM-012) are extremely high resolution—so high that 80 column text is clear and easily read even on the 9" monitor.

The DM series works well with all popular computers such as APPLE, TRS, IBM, OSBORNE and virtually any composite video device. All DM series monitors are compatible with existing 80 column "add on" boards.

Because there's no pincushioning effect, the DM series have a larger usable display area than most other monitors. So large that our 9" model comes close to competitive 12" units in display quality.

Short persistence phosphors make the DM series eye easy and ideal for graphics and 80 column word processing applications. An anti-glare screen filter and wide range of brightness and contrast adjustment make them ideal for practically any room lighting environment.

Both models are housed in sturdy and attractive metal enclosures. Cabinet colors are compatible with both APPLE and IBM color schemes. The units can be daisy chained for multiple display applications.

SPECIFICATIONS DM-091,—DM-012 SIMILAR

BANDWIDTH 18 MHZ TYPICALLY • VIDEO GAIN 30 db • RISE/FALL TIME LESS THAN 75 nSEC • SCAN FREQ. 15.75 KHZ • HORIZONTAL RESOLUTION 750 LINES • GEOMETRIC DISTORTION NOT TO EXCEED 1.5% • WEIGHT DM-091 12 LBS, DM-012 21 LBS • DIMENSIONS DM-091 8.5X8.5X9.05, DM-012 12.13 X11.4X11.65 • POWER 120 V.A.C. 27 WATTS • HIGH VOLTAGE 11 KV.D.C. • INPUT SIGNAL 1.5V COMPOSITE •

touch input technology, which would eliminate the need for a separate keyboard. All communication with the kitchen controller would be with voice or CRT touch entry.

A New Use for a Hallway

The home environmental/security status panel (see Fig. 3) will brighten up the hallway. This panel consists of a floor plan of the house. Each room area should be capable of displaying information. The environmental statistics monitored could be inside/outside temperatures, wind direction, weather status and possibly utility

status. It could monitor your water supply lines and warn if they are near freezing or if your hot water heater is failing (something I could have used last winter).

Of course the panel would allow you to enter temperature control information, like settings for different times and days of the week. This program may be viewed and edited at any time, and would be available over the phone to a small terminal you would take with you on vacation. The technology already exists.

The security aspects of the hall panel go beyond the sensing of win-

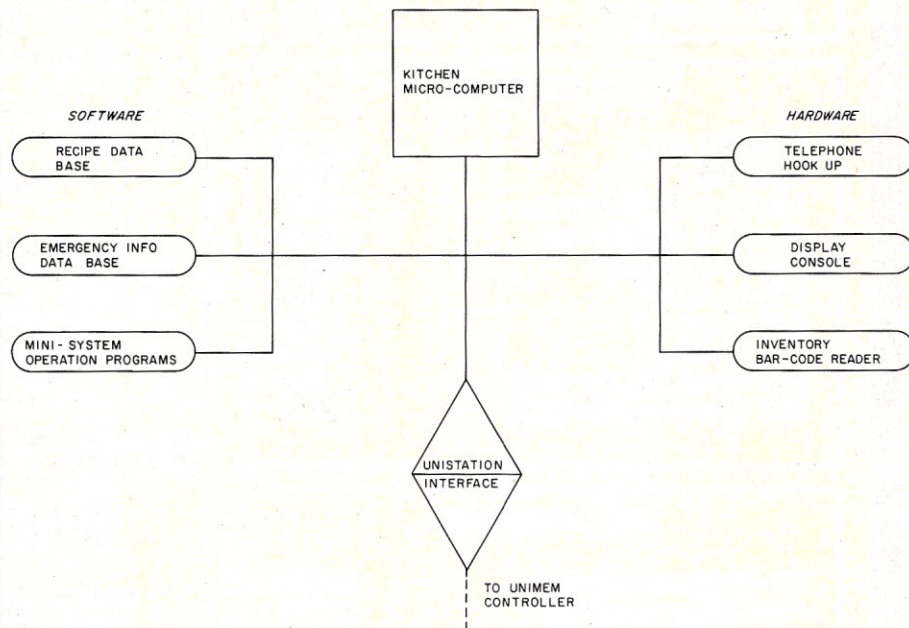

Fig. 1. Block diagram of kitchen controller system. All devices are contained within the kitchen system. Communication with the UNIMEM system is handled through the Unistation tone link.

Fig. 2. Rendering of proposed kitchen control center panel. Touch-sensitive CRT and various controls are shown.

NIBBLE EXPRESS VOLUME 2 NOW AVAILABLE!

The 1981 Anthology of the major articles and programs is underway! It contains *up-to-date enhancements and corrections to programs which appeared in Volume 2 of NIBBLE.*

Even if you have all 8 issues of NIBBLE in 1981, you'll want The Express to have updated program listings in one convenient package!

200 solidly packed pages with major programs and articles for your Apple! A **MUST** for your Library!

NIBBLE EXPRESS will be an invaluable reference for your Apple now and for years to come!

for only \$14.95 (plus shipping) you can make Nibble Express a permanent part of your library.

FOR TRS-80 MODEL I OR III IBM PERSONAL COMPUTER

- ★ **MORE SPEED**
10-20 times faster than interpreted BASIC.
- ★ **MORE ROOM**
Very compact compiled code plus VIRTUAL MEMORY makes your RAM act larger. Variable number of block buffers, 31-char.-unique wordnames use only 4 bytes in header!
- ★ **MORE INSTRUCTIONS**
Add YOUR commands to its 79-STANDARD-plus instruction set!
Far more complete than most Forths: single & double precision, arrays, string-handling, clock, graphics (IBM low-res. gives B/W and 16 color or 200 tint color display).
- ★ **MORE EASE**
Excellent full-screen Editor, structured & modular programming
Word search utility
THE NOTEPAD letter writer
Optimized for your TRS-80 or IBM with keyboard repeats, upper/lower case display driver, full ASCII.
- ★ **MORE POWER**
Forth operating system
Concurrent Interpreter AND Compiler
VIRTUAL I/O for video and printer, disk and tape (10-Megabyte hard disk available)
Full 8080 or 8088 Assembler aboard
(Z80 Assembler also available for TRS-80)
Intermix 35- to 80-track disk drives
IBM can read, write and run M.3 disks
M.3 can read, write and run M.1 disks

dow switches (Fig. 4). Here your system monitors every room of the house, counting people and telling you where everybody is.

Outside, you would have two perimeters described around the property. When violated, the first (being the outermost) alerts the hall panel that a possible intrusion might occur. At this time no alarm is given to you, the occupant. The computer simply steps up security measures and scans the innermost perimeter more thoroughly.

Being attached to the phone line allows the system to dial the proper authorities and leave an emergency

message. It also could call you if you were away at the time. Both fire and intrusion detection are handled by the same control circuitry. This kind of distributed control, where each function is handled by a separate expert computer, is the easiest to implement. Rooms can be added as time and finances allow. Interwiring between rooms would be minimal or nonexistent.

Living Room Activities Center

In many families the living room is the center of most indoor activities. Some use the family room, so I'll consider these the same. The typical liv-

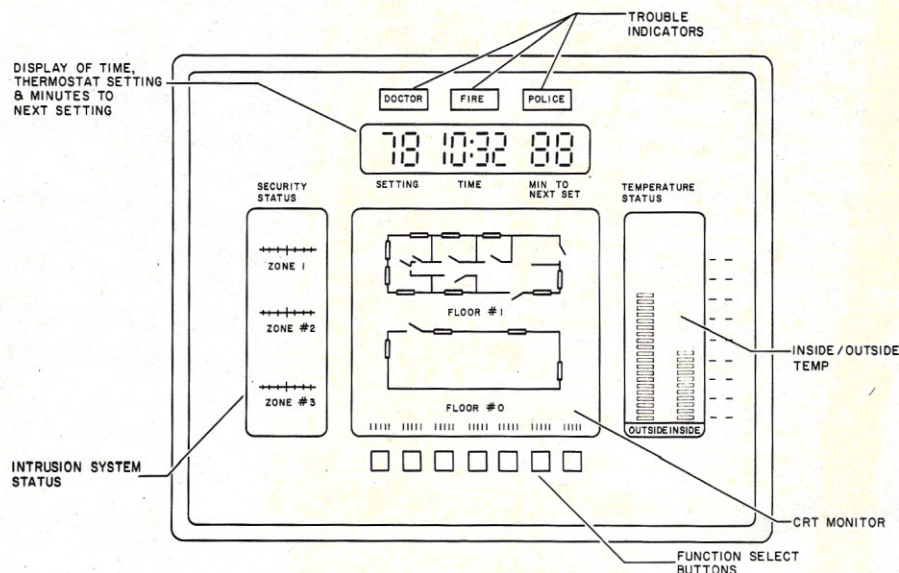

Fig. 3. Environmental/security status panel mounted in hallway displays temperature, wind direction and speed, thermostat setting and security information of all rooms and perimeter of home.

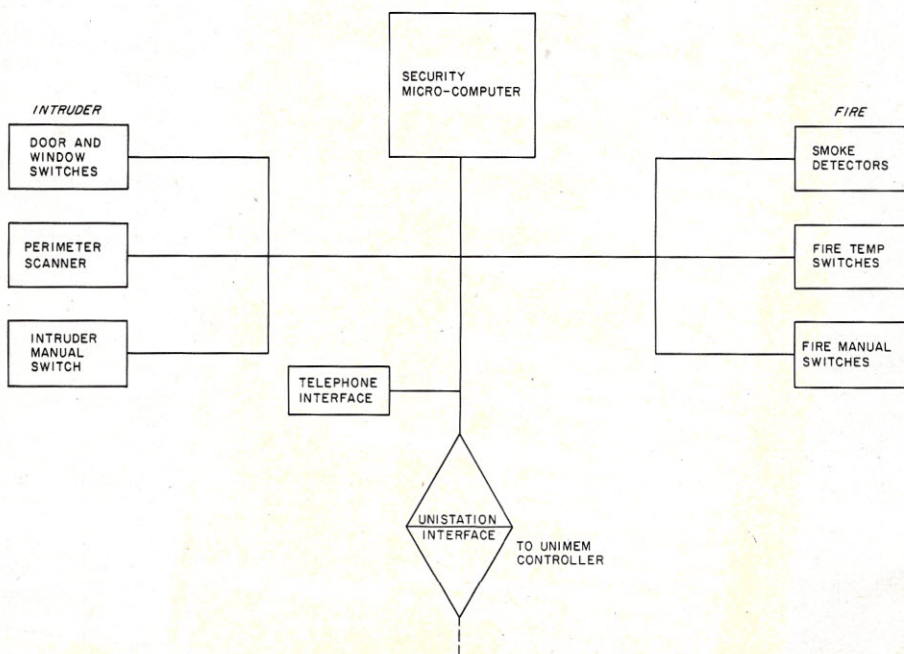

Fig. 4. Security system block diagram.

"THROW AWAY MY BACK ISSUES?.. ..NEVER!"

According to a recent survey, 92% of MICROCOMPUTING's readers keep their back issues.

Why is that?

We can think of two possibilities.

- 1) They think a complete edition of MICROCOMPUTING will someday be very valuable.
- 2) They think every single copy of MICROCOMPUTING already is very valuable.

Well, we're very proud of MICROCOMPUTING, and we think of it as one of the highest quality magazines around, but even we have a hard time believing the first reason.

That leaves reason number 2) which makes us ask "What makes MICROCOMPUTING so valuable?" And the answer?

Information. The kind of information that has application to today's world. The kind of information that doesn't outlive its usefulness. The kind of information our readers will want to refer to again and again—programs, applications, hardware reviews, software reviews, new product announcements, articles on language, education, business, utility, and so much more. MICROCOMPUTING is the all-encompassing monthly journal that takes you beyond the limits of your system manufacturer's documentation into an entirely new and exciting world of microcomputing. Special emphasis is placed on the Apple, Atari, Commodore, Heath, and IBM systems.

But whatever your system, you'll find the information contained in MICROCOMPUTING to be invaluable from the day you receive your first copy until the day microcomputers disappear from the face of the earth... and the Moon, and Mars, and Venus, and... well, until a long time from now.

Start your own collection of MICROCOMPUTING. Get one year's subscription for only \$24.97. That's less than 7¢ a day. That's not much to invest when you

consider the wealth of information you receive in return. And who knows... maybe reason 1) is true after all.

To receive your 12 monthly issues of MICROCOMPUTING, simply fill in the attached reply card or the coupon below (a photocopy is acceptable) and send it to MICROCOMPUTING, Subscription Department, PO Box 997, Farmingdale NY 11737. Or call toll free 1-800-258-5473.

MODEM

\$129⁹⁵

No other acoustic modem gives you all these features at this low price.

The MFJ-1232 Acoustic Modem gives you a combination of features, quality and performance that others can't match at this price.

0-300 Baud, Bell 103 compatible. Originate/Answer. Half/full duplex. RS-232, TTL, CMOS level compatible. Use any computer. Cassette tape recorder ports save data for reloading or retransmission. 6 pole active filter handles weak signals. Carrier detect LED indicates adequate signal strength for data recognition. Quality "muffs" gives good acoustic coupling, isolates external noise for reliable data transfer. Crystal controlled. "ON" LED. Aluminum cabinet. 110 VAC or 9 volt batteries. 9x1 1/2x4 in.

Apple II, II Plus: software and cable for modem, MFJ-1231, \$39.95. Plugs into game port. No serial board needed.

It's like having an extra port

\$79⁹⁵

MFJ-1240 RS-232 TRANSFER SWITCH. Switches computer between 2 peripherals (printer, terminal, modem, etc.). Like having extra port. Push button switches 10 lines (pins 2,3,4,5,6,8, 11,15,17,20). Change plug or cable to substitute other lines. Push button reverses transmit-receive lines. LEDs monitor pins 2,3,4,5,6,8,20. PC board eliminates wiring, crosstalk, line interference. 3 RS-232 25 pin connectors. 7x2x6 in.

\$99⁹⁵ MFJ-1108 AC POWER CENTER.

Adds convenience, prevents data loss, head bounce, equipment damage. Relay latches power off during power transients. Multi-filters isolate equipment, eliminate interaction, noise, hash. Varistors suppress spikes. 3 isolated, switched socket pairs. One unswitched for clock, etc. Lighted power, reset switch. Pop-out fuse. 3 wire, 6 ft. cord. 15A, 125V, 1875 watts. Aluminum case. Black. 18x2 3/4x2 in. MFJ-1107, \$79.95. Like 1108 less relay. 8 sockets, 2 unswitched. Other models available, write for free specification sheet.

Order from MFJ and try it. If not delighted, return within 30 days for refund (less shipping). One year unconditional guarantee.

Order yours today. Call toll free 800-647-1800. Charge VISA, MC. Or mail check, money order. Add \$4.00 each for shipping and handling.

MFJ ENTERPRISES, INCORPORATED

921 Louisville Road, Starkville, MS 39759

Fig. 5. Living center entertainment/control system.

ing or family room holds various entertainment devices such as TV, stereo and (most recently) the video game. There are plenty of opportunities to computerize or centralize the control of these (see Fig. 5).

Imagine, if you will, one hand-held remote control device that works for all the entertainment devices (see Fig. 6). You can select which Atari game you want to play simply by entering the number on your controller. Video switching between antenna and game is automatic and the joysticks are remote without wires.

Various activities around the house may be monitored from this control center. You could balance your bank accounts and keep your home records here. A Datapak solid state memory module would fill your mass storage requirements. This small matchbox-sized package can store data up to five years, and the data is instantly accessed when you insert the module into a Datapak receptacle in one of the key locations around the house. When used with the pocket mini described during our tour through the kitchen, it eliminates the need for note paper.

Word processing for letter correspondence and personal computing is also accomplished in the living center, because the same Apple or

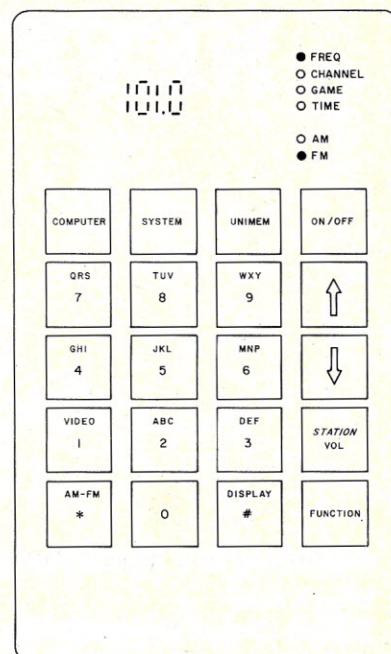

Fig. 6. View of hand-held living center remote controller. Communication between it and the controller is via infrared rays.

TRS-80 that you use is the controller for the system. In upcoming articles I'll describe this entire system with hardware and software for the various home computers.

The cleaning of this and the other rooms of the house is done with work robots (Fig. 7). These are squat cir-

Parallel TTL Input IBM "SELECTRIC" PRINTER/ TYPEWRITER

Refurbished & Tested
Operational

- Use as a Typewriter
- Use as a Computer Printer
- Excellent for Word Processing
- Takes Standard "Golf-Ball" Elements

Only
\$399

This COMPLETE "Selectric" I/O Printer includes the heavy-duty, 15 character per second model 745 with 15-inch frame, plus individual Hi-Rel Solenoids for all characters & functions. The functions are decoded from 4 input data bits while characters take 6 bits plus "strobe". Since all inputs are TTL, any micro capable of 14 bits of output (Two 8 bit parallel ports) can drive the printer using a "software" driver. Or, a simple parallel or serial input may be built for the machine. Magnetic reed switches are used throughout for keyboard data as well as machine feedback for checking and time out. This is undoubtedly the *BEST* bargain in a typewriter/printer ever available!! Requires 115 VAC for typewriter and 24 VDC & 5 VDC for the solenoids.

Only **\$399.00**

cular machines designed to either wash or vacuum a floor. They work primarily at night but may be programmed to clean during the daylight hours. The central computer for the house, which I call UNIMEM, controls these robots.

Undisturbed Sleep

The bedrooms of this future home are equipped with a dedicated dwelling controller which performs all the functions of a nursemaid. Simply telling it to turn out the lights will accomplish what so many people end up groping for before bed. You could order up soft music or whatever turns you on or off, as the case may be.

The system provides alarm functions, as well as a selective call screening service for the wee hours (Fig. 8). If someone wants to leave a message with you, it will be stored

Fig. 8. View of the bedroom control panel. Most information is entered or retrieved via voice.

either in voice or text format for your listening/viewing pleasure the next morning. A schedule of the day's events and a reminder of medical or other appointments greets you daily.

Nice house, huh? Get excited because we are going to accomplish most of those ideas. Each article will present a piece of the system, and each piece can stand alone if you

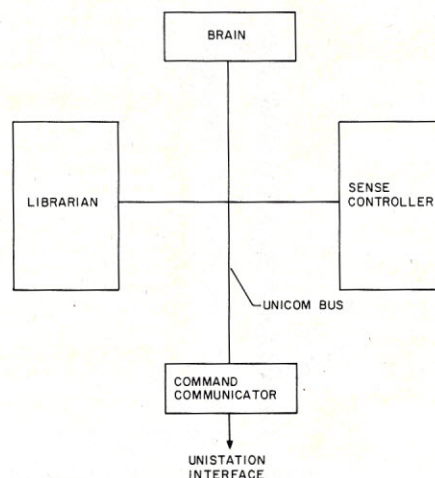

Fig. 9. Block diagram of the UNIMEM control system.

want to skip some part of the unit.

UNIMEM—Master of Control

The UNIMEM computer unit serves as a master overseer of all the distributed computer functions, and controls important house information and utilities. UNIMEM is always on, watching over the flock.

Let's get into the architecture of the UNIMEM system to see how it interacts. A block diagram of the structure is shown in Fig. 9. Examine each block, starting with the command communicator module. The main duties and functions of this unit are the following:

- Performs communication handshaking between functional systems
- Provides man-machine interaction through voice and tone keypad entry
- Acts as the eyes-ears-voice of UNIMEM

Communication between units within UNIMEM is provided via a parallel arrangement called the UNICOM bus. Here every unit communicates as a slave to the brain. The bus structure consists of the signals shown in Table 1.

Communication between units starts with an interrupt originating from the calling party to the brain. The brain, upon recognizing the call, inquires as to the nature of the call. If it is simply the passing of information from the communicator to the librarian, the brain will do a store-and-forward operation. For other cases such as information recall or control operations, the brain will take over communications.

In most instances the brain unit is not processing data. Each expert system does what it can to handle the day-to-day chores. The external computers for the kitchen, entertainment and environmental/security control all interface to the Command Communicator through a tone-controlled link. These tones are standard touch-tone signals made up of the same frequencies as those used in the telephone system.

The individual systems act as remote input stations connected to UNIMEM and are used to relay messages from UNIMEM to you.

Librarian

What good is a home control center without a good library? This one keeps both permanent and temporary records of everything. Birth certificates, insurance policies and automobile service information are a few

of the permanent types of data. Events, such as medical appointments, and current clothing sizes of all residents exemplify the type of temporary data stored.

This data is remembered in different ways. Permanent data is blown into EPROM; temporary info is held in battery-backed-up RAM. Large amounts of data can be stored off line on magnetic tapes or disks. But the rule is that if it needs to be instantly accessible, it cannot be on mass tape storage.

Sense Controller

I have discussed the eyes-ears-mouth and brain with associated memory bank, and it's time to discuss muscle. I/O control for the house is fully distributed: Cooking chores are handled by the kitchen controller; security and environmental con-

trol has its associated controller; even the bedrooms have separate controllers. So what does the sense controller do?

Remember the robot vacuum cleaner? This, along with a host of lawn mowers, irrigation droids, etc., is commanded via this unit. This controller also monitors electricity use, water consumption and other important utility items. It dispatches the work robots when needed. The irrigation droid, for instance, senses soil moisture around the house; when it's dry, out comes the water boy.

Well, that's the controller in a nutshell. In the coming months I'll be refining these design standards and constructing the systems. The living center will be based entirely on personal computer I/O, and I will include listings for all the popular micros. The kitchen and security systems will employ single chip microcomputers which you will learn about along the way.

Next month I will start off by designing and constructing an ears-and-mouth subsystem. This interface will recognize voice signals and enunciate any message. ■

Data 0-7	— 8-bit bidirectional data bus
C/D	— control/data status command
PWR	— +5 V logic power

COMPUTER KITS – FROM \$69.95

LNW SEMI-KITS can save you hundreds of dollars. By obtaining your own parts at the lowest possible cost and assembling the **LNW SEMI-KITS**, you can have the most highly acclaimed microcomputer in the industry – the **LNW80**. The **LNW SEMI-KITS** are affordable modules. You can start with a modest cassette system and expand to a full 4Mhz TRS-80 compatible system with 5 or 8 inch double density disks and color at any time.

A. LNW80 CPU – Made of high quality FR4 glass epoxy double sided circuit material, with plated-through holes and gold edge connector. It is fully solder-masked and silk screened. Here are just some of the outstanding features you will have when your **LNW80 CPU** board is fully assembled:
• 16K RAM • Color and black and white video • 480 x 192 high resolution graphics • 64 and 80 column video • 4 Mhz Z80A CPU • Upper and lower case display • 500 and 1000 baud cassette I/O – **\$89.95**

B. SYSTEM EXPANSION – Expand the **LNW80** computer board, **TRS-80** and **PMC-80** computer with the following features: • 32K memory • Serial RS232C and 20Ma port • Real time clock • Parallel printer port • 5 inch single density disk controller • Expansion bus (screen printer port) • Onboard power supply • Solder-masked and silk screened legend – **\$69.95** (tin plated contacts) – **\$84.95** (gold plated contacts)

C. KEYBOARD – 74 key expanded professional keyboard – includes 12 key numeric keypad. Fully assembled and tested. – **\$99.95**

D. COMPUTER CASE – This stylish instrument-quality solid steel case and hardware kit gives your **LNW80** that professional factory-built appearance. – **\$84.95** Add \$12.00 for shipping.

E. SYSTEM EXPANSION CASE – This stylish instrument-quality solid steel case and hardware kit gives your **SYSTEM EXPANSION** interface that professional factory-built appearance. – **\$59.95** Add \$10.00 for shipping.

F. LNW80 CPU – HARD TO FIND PARTS KIT – \$82.00

G. LNW80 VIDEO – HARD TO FIND PARTS KIT – \$31.00

Plotting with the Microline 80

The Microline 80 block graphic characters make curve plotting easy. This Basic program shows you how.

By Donald Galler

Many microprocessor-based printers have special features that can be used for graphics or plotting. The Okidata Microline 80 dot matrix line printer, based on the Intel 8048 chip, prints at five, ten or 16.5 characters per inch and either six or eight lines per inch. These parameters can be selected under program control by special character sequences. The Microline 80 can also print 64 special block graphic characters, as well as all the characters represented by seven-bit ASCII codes. The program shown in the listing uses the block graphic characters to plot curves with 20-element-per-inch resolution.

Microline 80 Block Graphics

Fig. 1 shows the format of Microline 80 graphic characters. Standard alphanumeric characters are printed

Fig. 1. Format of Microline 80 graphic characters.

using a seven-dots-high by nine-dots-wide matrix, while graphic characters are printed using a 12 by 6 matrix. Since the Microline 80 uses a seven-wire print head, it prints graphic characters in two passes under internal microprocessor control.

The graphic characters are broken into six blocks, or elements, each four dots high and three dots wide. These characters are selected by setting the MSB (bit 7) of the ASCII character code to a 1; this differentiates alphanumeric characters from graphic characters. The remaining bits are used as follows: bits 0-5 select one of the 64 possible graphic characters, bit 6 is ignored. If one of the six low-order bits is a 1, then the corresponding element (as numbered in Fig. 1) will be printed. These elements are the smallest entities that can be printed anywhere on an output page

under software control.

Before designing the plotting program, decide which character width and line spacing will give the best graphic element dimensions. Table 1 shows all of the possible element dimensions. To get an almost square element, I chose 10 cpi and 6 lpi. The resulting element size, 1/18 inch high and 1/20 inch wide, gives a plotting resolution of about 20 elements per inch (18 per inch vertically and 20 per inch horizontally). This is two or three times better than plotting with characters using 10 cpi and 6 lpi.

Constructing Axes and Curves

Since the Microline 80 can print on 8½- by 11-inch paper, I arranged the x and y axes to produce plots on this size paper. The format of the plots is shown in Fig. 2.

The x axis is vertical (along the 11-inch side) while the y axis is horizontal (along the 8 1/2-inch side). The y axis consists of a single row, 50 characters (100 elements) long, with extra elements printed every five spaces for tick marks.

The x axis consists of two columns (each 50 characters (150 elements) long), so that two different types of tick marks (5 units, 10 units) can be printed, as with the y axis. Complete each axis by adding one additional character, which allows the last tick mark to be printed.

The curve is plotted in the area shown in Fig. 2 and is bounded by the x and y axes. The plot area is 100 times 1/20 or 5 inches wide (along the y axis) and 150 times 1/18 or 8.3

Graphic Print Element Dimensions			
		lines per inch	
		6	8
chars per inch	5	$\frac{1}{10} \times \frac{1}{18}$	$\frac{1}{10} \times \frac{1}{24}$
	10	$\frac{1}{20} \times \frac{1}{18}$	$\frac{1}{20} \times \frac{1}{24}$
	16.5	$\frac{1}{33} \times \frac{1}{18}$	$\frac{1}{33} \times \frac{1}{24}$
Dimensions are width × height (inches)			
Table 1. Dimensions of graphic print element for different line and character spacings.			

Donald Galler is an engineer with Alexander Kusko, Inc. (Consulting Engineers, Needham Heights, MA 02194) and is president of Galler Systems (PO Box 251, Newton, MA 02164), a software consulting group.

inches long (along the x axis). This format allows for the extra space needed to print labels and values along with the axes. The curve is plotted along with the axes by setting the bits corresponding to the y values in each of the 150 rows. In this simple method, the y values are stored in an array and one element is printed in each row of the x axis for each y element.

Plotting Program

A program written in North Star Basic for plotting with the Microline 80 is shown in Listing 1. To accommodate the inevitable modification of the program, it is organized as a main program and five subroutines. In the present form of the program, each of the subroutines is called only once. The function of each of the subroutines is as follows:

1. Read data file and initialize arrays (line 1000)
2. Construct x axis (line 2000)
3. Construct y axis (line 3000)
4. Construct graph (line 4000)
5. Print axes and graph (line 5000)

The first subroutine prompts the filename from the console (device #0) and reads the data to be plotted on the printer (device #1). If the file is not found at that point, a warning message is issued and the program terminates. If the file is found, it is read and the plotting is performed. The data file is structured as shown below:

1. Number of y values (N, 150 max)
2. y values (N of these)
3. lowest x value
4. highest x value
5. lowest y value
6. highest y value
7. x axis label (20 chars. max)
8. y axis label (20 chars. max)
9. Title of plot (40 chars. max)

After the data is read, the 2500-character string that holds the 50 by 50 character plot area is initialized. This is necessary even though North Star Basic initializes character strings to blanks because a graphic blank for the Microline 80 is hex 80, not hex 20. The x and y axes are constructed by first initializing the 51-character strings, and then counting through the positions that need to have extra bits set for the tick marks.

Once the axes are constructed, the graph is generated in memory as follows: For each of the N data values, a number (0, 2 or 4) is generated from the do loop index I (line 4010) and the y value is used to generate a second number which represents the "odd-

ness" of the element to be set. This number is a 1 if the element number is 1, 3 or 5, and it is 0 otherwise. A character location is also generated at

this point. The graphic element is made by raising 2 to the sum of the two numbers just computed and adding the result to the character at the

Fig. 2. Axes construction and graph format for Microline 80 plotting program.

Program listing. North Star Basic program for plotting with the Microline 80.

current location. This procedure gives the bit for the element an "or" relationship with the existing bits.

With the axes and graph constructed, the title is printed, using the Microline's large character size, followed by the y axis label and the y axis itself. The graph is printed one line at a time so that a piece of the x axis and a row of the graph are printed on the same line. The x and y axes labels are centered in the ordinary way and some of the x axis values are printed as well. A sample of the output is shown in Fig. 3.

Room for Improvement

The sample run shows that the pro-

gram can generate medium resolution (20 elements per inch) graphs using the Microline 80 special graphic characters.

To make the program more suitable for general-purpose plotting, the following features should be added:

- Plotting more than one set of data on one graph

- Automatic scaling of the y values

- Automatic sorting of data according to x values

These features, in conjunction with the program shown here, represent a general-purpose plotting package that will generate medium resolution plots using the special features of the Microline 80 line printer. ■

Apple's Magic VisiCalc Formulas

This program to print VisiCalc formulas leads you on an adventure in string manipulation in Apple III Business Basic.

By Justin Crom

VisiCalc is a fantastic tool for business planners. It enables analysts to quickly examine "what-if" scenarios without requiring a degree in computer science to perform the modeling; however, this tool does have some disadvantages. One cited often by planners who are accustomed to modeling on mainframes is the inability to print out the formulas in effect. The only method of formula determination available with VisiCalc is loading the model and scanning it cell-by-cell.

This problem bothered me too. On several occasions I've created models that I would like to discuss with others, but have found that sitting side by side with another planner in a darkened room and peering at a green screen was not much fun. Software packages are available for the Apple II that will extract the formulas from a stored VisiCalc model, but I'm not aware of a similar product for the Apple III.

Storage Method

When a VisiCalc model is saved on disk, VisiCalc creates a text file starting with the lower right corner cell of the model. Table 1 shows the output of a simple VisiCalc model. Table 2 shows the way the same model is stored on disk: the cell contents are prefaced with a > sign followed by the cell coordinates and a colon. Cells

are written on the disk in right-to-left order, bottom row first and moving upward. If a VisiCalc cell is blank, nothing is stored.

After all cells have been stored, VisiCalc then writes whatever global options were in effect for the cell. The last information placed on disk by VisiCalc is the cursor position at the time the model was saved. While a copy of this text file contains all the information required to reproduce the model with a computer, it is not easy for a human to decipher.

To render the stored VisiCalc model readable, all you have to do is read the information into a program that will reformat it to look like the VisiCalc screen, with the *formulas* showing in the cells instead of the values. Sounds easy, doesn't it?

Approaches to the Solution

My first attempt at a solution yielded an Apple III Business Basic program based on reading all stored cells into a string array. The information was then printed in a row and column format, starting in the upper left corner of the model. This approach worked fine with small VisiCalc models (40 rows x 12 columns), but bombed due to lack of memory when used with a more typical business model.

After searching in vain for an elegant algorithm, I opted for the

sledgehammer approach. A printout of a VisiCalc spreadsheet can be thought of as a series of vertical "stripes," with the width of each stripe determining the number of VisiCalc columns that will fit a sheet of paper. With my printer, 12 columns seemed appropriate. The length of the stripe depends on the number of rows in the VisiCalc model (254 maximum).

The VisiCalc model is read once for each stripe required to print out the model, and only that information needed to complete the stripe is stored in the string array. While this method involves numerous disk accesses on a large model, it works. A sample of the output is shown in Table 3.

String Handling

Apple III Business Basic provides some powerful tools for manipulating string data. Here's how I used them:

The For...Next loop shown in lines 140 through 270 in Listing 1 reads each block of cell information from the VisiCalc model, checks to see if the cell is within the range of columns to be printed for the current stripe, and discards unwanted data. Data within the desired range is stored into a string array.

Line 165 checks the first element of the data. If it is a slash instead of a > sign, the end of the cell contents has been reached and the global options block is being read. The program

MICRO-80 COMPUTER

Z80A CPU with 4MHz clock and CP/M 2.2 operating system. 64K of low power static RAM. Calendar real time clock. Centronics type parallel printer interface. Serial interface for terminal communications, dip switch baud rates of 150 to 9600. 4" cooling fan with air intake on back of computer and discharge through ventilation in the bottom. No holes on computer top or side for entry of foreign object. Two 8" single or double sided floppy disk drives. IBM single density 3740 format for 243K of storage on each drive. Using double density with 1K sectors 608K of storage is available on a single sided drive or 1.2 meg on a double sided drive. Satin finish extruded

aluminum with vinyl woodgrain decorative finish. 8 slot backplane for expansion. 48 pin buss is compatible with most OSI boards. Uses all standard IBM format CP/M software.

Model 80-1200	\$2995
2 8" single sided drives, 1.2 meg of storage	
Model 80-2400	\$3495
2 8" double sided drives, 2.4 meg of storage	
Option 001	\$ 95
Serial printer port, dip switch baud rate settings	

Software available in IBM single density 8" format.

More

then branches to line 1500.

Line 170 removes the first element of the string. MID\$ returns a substring starting at the value given by the second parameter. Since no third parameter was included to tell MID\$ where to stop, all elements from position 2 to the end are returned.

Line 180 finds the location of the colon within the cell data. Line 190 divides the cell data at the colon location: the left half contains the cell coordinates or index and the right portion contains the cell format and contents. LEFT\$ returns the leftmost characters specified by the second parameter.

Lines 210 through 250 break down the VisiCalc cell index into a form usable as array subscripts. (VisiCalc columns are referenced by letter combinations, A through BK, 63 columns in all.) Line 230 tests the second element of the index to see if it is a letter or a number. If it is a number, the first element of the index is the column letter. If line 230 determines that the second element is a letter, then both the first and second elements describe the column. In either case, the remaining portion of the index after the column descriptor is the row number. The balance of lines 230 through 250 converts the letter-number coordinates of VisiCalc into a row and column number pair.

Line 252 stores the coordinates of the first VisiCalc cell read since it is the highest numbered cell. Lines 254 and 256 determine if the cell is within the "stripe" to be printed on this pass.

The remaining lines of the For... Next loop index a valid cell into the string array CELL\$. Line 265 suppresses the leading quotation marks that VisiCalc uses to designate labels.

Once a slash has been detected during a read, program execution branches to line 1500. This section reads in the VisiCalc global parameters and prepares the cells' formulas for printing.

Line 1570 strings the global parameters together with separating spaces. Line 1560 detects the end of the global parameter section by using LEFT\$ and MID\$. An English translation of line 1560 is: "If the leftmost position of a substring from position 3 of the main string is the > sign, then go to 1600." Examine the last part of Table 2 while contemplating this.

Lines 1700 to 1750 determine the column headers for the stripe to be printed.

The Gosub 9000 prints the name of

the VisiCalc file and the global parameters at the top of the page along with the column headers for the stripe.

Lines 1800 to 2010 divide the cells into blocks nine elements long and print the blocks. Note the use of the third parameter with MID\$. Lines 1980 and 1990 count the lines being printed and cause a skip over the page perforation with a Gosub 9000. Headers are repeated on each page.

The cryptic-looking print statement in line 9000 sends a string of special commands to my Epson MX-80 via a PKASO interface board. Replace these with whatever your printer requires.

Arrival at line 2020 signals the completion of a stripe. Line 2020 increments the marker for the first column in the next stripe. If the start of the next stripe is greater than the number of columns in the VisiCalc model, then line 2024 gets the program out of the loop. Line 2030 tests for the special last stripe on a big model: since VisiCalc's maximum number of columns is 63, the last stripe is only three cells wide.

If another stripe remains to be printed, the program branches to line 114. Here the name of the VisiCalc file and the current values of bcol and ecol are written to disk. I did this to enable the use of Clear in line 122 to set all string storage to null strings and to free up memory in preparation for the next stripe.

Line 145 represents another attempt to keep memory from being cluttered with scraps of string segments: every 100 times through the For...Next loop generates a call to the reserved variable FRE, forcing a cleanup of string storage. This is necessitated by the way Apple III Business Basic handles string assignments. If A\$="DOG" and then is reassigned to "CAT", the string "DOG" remains. Only a call to FRE invokes a cleanup.

Conclusion

Perhaps you perceive an approach to this problem that doesn't involve this many passes through the stored VisiCalc model. If so, then write it up and send it in. But for now, I'm content with this program. Maintaining a notebook with printouts of the models and their formulas saves me time whenever I have a new model to create. I no longer have to swap disks and scan all over the place to see how I did it last time. ■

Dealers SELL

Selling *Microcomputing* will make money for you. Consider the facts:

Fact #1: Selling *Microcomputing* increases store traffic—our dealers tell us that *Microcomputing* is the hottest-selling computer magazine on the newsstands.

Fact #2: There is a direct correlation between store traffic and sales—increase the number of people coming through your door and you'll increase sales.

Fact #3: Fact #1 + Fact #2 = INCREASED \$ALES, which means more money for you. And that's a fact.

For information on selling *Microcomputing*, call 800-343-0728 and speak with Ginnie Boudrieau, our bulk sales manager. Or write to her at *Microcomputing*, 80 Pine St., Peterborough, NH 03458.

MICROCOMPUTING

A Best-Selling Program

This Bookshelf Database program for the Apple lets you keep track of the books in your personal library according to author, title, publisher, topic, etc.

By Linda M.B. McKinnon

Bookshelf Database is an Applesoft program for a 48K Apple II Plus. You can add approximately 140 books to the database with the present record structure of accession number, author, title, publisher, ISBN#, catalog number, Library of Congress number and up to three subject headings. The program is completely interactive, with full edit and deletion capability, and lets you manage your library. Once it's set up you can search the database by author, title, publisher or subject. The search queries can also be used in truncated mode.

Applications for the program abound, such as the creation of specialized collections for helping students, professionals or hobbyists organize their information quickly. Bookshelf provides alphabetized listings that are handy to reference when browsing new books at the bookstore. A personalized Bookshelf listing of your textbooks can help prevent duplicate purchases.

The Bookshelf Database Applesoft program (running under DOS 3.3)

creates a text file of the books selected for the database. After selecting Input mode from a varied menu, type in the appropriate data for each book to be entered into the database. Accession numbers are automatically assigned so that no duplication occurs. If a book is deleted, its number is not reused.

Be careful not to embed commas in the input data—Applesoft will read them as delimiters and end the input of the record field. If an input error is caught after the program has read the data, you can easily correct it using the Edit option. Duplicate records can be removed with the Delete option.

The entered data is stored on disk alphabetically, by author, in a text file using a binary tree data structure. You can store data at any time—as you progress through the input stage or later on. I've dissected the pro-

 DO YOU WANT TO DELETE THIS ITEM FROM THE DATABASE?
 PRESS "Y" FOR YES OR "N" FOR NO!

Table 5. Sample of the Delete Mode option.

gram in Table 1. Table 2 shows the program's menu of options.

Book input mode. The Book Input mode prompts you for the author, title, publisher, date of publication, International Standard Book number, Library of Congress number, and up to three key words. To skip fields enter a hyphen for these entries. An example is shown in Table 3.

List all books mode. This option will list the entire database alphabetically

by author. You can choose to print on the screen or at the printer. An example appears in Table 4.

Delete a book mode. This mode allows you to search for a book and then delete it. If you discover that you have searched for the incorrect book, it gives you the option of changing your mind and returning to the main menu. You may delete any book except the root node; this node is the root of the tree structure and is

the first record or book written in the text file. A sample of the Delete mode option appears in Table 5.

Edit mode. This mode lets you change any data in a record with the exception of the accession number. It presents you with the actual record as it appears in the database. You can edit the record field by field. If there are no changes, then you would press return; otherwise, you would type in the correction data.

Search mode. The Search mode allows you to search by author, title, publisher or subject. You can truncate information if you are unsure of a particular entry. To truncate you simply substitute a question mark in place of the remainder of the word, and the program will select all data that starts with the characters preceding the question mark. While in Search mode, all records containing search data are presented on the screen, one at a time, until all items have been found.

The program lets you save the database as a textfile (Bookshelf) while you are using the database or after you have completed your session at the computer. ■

One picture is worth a thousand numbers.

Introducing the new wide-tape Quasar® 4-Color Plotter, driven by the portable with the speed and power of a desktop computer.

Coupled with the sophisticated Quasar Hand-Held Computer, this advanced, 80-character plotter turns dry statistics into dramatic graphics anytime, anywhere. Makes analysis easier, presentations more exciting.

The Quasar HHC is actually a desktop computer you can take with you. Its heart is a fast, powerful 6502 microprocessor, with powerful programming languages—Microsoft BASIC, SnapBASIC and SnapFORTH, and high-memory capacity of up to 8KB RAM and 16KB ROM internal, expandable with external Memory Modules and ROM's or EPROM's in capsules. Operates on rechargeable NiCad batteries and retains data with power off.

The Quasar mainframe has a complete range of intelligent peripherals including a new 40-Character Printer, Telephone Modem/Cassette Interface, RS232 Interface, Color TV Adaptor, I/O Adaptor that works with up to 6 peripherals.

That means the Quasar HHC system can be your personal computer and database, or portable terminal that interacts with a large, central computer, or supplementary system to host computers for data retrieval, collection and transfer.

An expanding array of snap-in software includes modelling programs for "what if" alternatives, programs for time-billing professionals, financial calculations, and many others for scientific, engineering, marketing and business applications.

For a complete information kit, write Quasar HHC Dept., or use Reader Service Card.

Putting the Sharp PC Through Its Paces

Out on the track, the Sharp Pocket Computer performs like a real champion: It can do all those tasks of a regulation-size home computer but with the price and portability of a pocket computer.

By Tim Daniel

Writing an ad for Sharp Electronics Corporation's PC-1500 pocket computer would be easy. Just tell everyone how small this computer is. Speak of its powerful Basic and boast about the accessory CE-150, an ingenious four-color printer and cassette interface. Wouldn't it be nice if after all the hype was forgotten the PC-1500 was still around to prove your ad right? I cautiously propose that this computer will not only live up to your expectations but exceed them.

A Quick Look

The PC-1500, measuring $7\frac{3}{4} \times 3\frac{1}{4} \times 1$ inch and weighing about as much as a pound of hamburger, is larger than Sharp's firstborn, the PC-1211. I hesitate to call it a "pocket computer," preferring the phrase "corner of the briefcase computer," though that

doesn't make for good ad copy.

Nor will an ad be likely to extoll the PC-1500's eight-bit CMOS microprocessor—old stuff in this age of 16-bit monsters. But what may be time proven need not be mundane. Sharp proves this by combining the microprocessor with 16K ROM, 3.5K of RAM, a 65-key keyboard and a 156×7 liquid crystal display.

The \$300 list price of a PC-1500 pays for some pretty sophisticated electronics. Mindful of its battery lifeline, the PC-1500 shuts itself down if you don't give it something to do. Shutdown need not be a cause for worry though. The program and variables in memory stay there thanks to the computer's Memory Safe Guard. Another feature that Sharp doesn't tell you about allows the computer's four AA batteries to be removed for short periods of time without losing

your program.

If computational power rather than battery power is your interest, then consider that the PC-1500 is a calculator as well as a computer. It offers the typical four-banger functions plus square roots and pi via single-key entry. Natural and common logs, exponential, trig and inverse trig, plus angular conversions are available as multikey commands. A conventional algebraic hierarchy is employed (sorry, RPN fans) and calculations are carried out to ten places. If the decimal system bores you, then try using hexadecimal values. The PC-1500 can handle those too.

There is a time and a place for ordinary calculators; many pocket computer owners prove this by using their expensive machines to solve problems that a cheaper programmable calculator could handle. But as much as I like my trusty TI "scientific" for quick number crunching, it looks like a moron when compared to the Basic-speaking PC-1500. One caveat though—if you're not prepared to jump in and do your own programming, think twice about buying a PC-1500. Or at least wait until a variety of commercial software is available. At this writing not much can be had other than what you copy out of Sharp's application manual or write yourself (see sidebar).

Word Processing?

I'll spoil the fun early by saying that I did not write this article using the PC-1500 as my word processor. Its QWERTY keyboard and upper/lowercase capability notwithstanding,

The PC-1500's 7×156 dot liquid crystal screen can display up to 26 characters or be programmed with special graphics commands. The top of the display has several special status indicators.

Address correspondence to Tim Daniel, 7 Peabody Drive, Oxford, OH 45056.

ing, a 26-digit display is just not meant for serious text handling. Besides, who would even consider writing the next great American novel on a computer that has no apostrophe?

If you are willing to accept the limit of 26 digits, then you probably won't balk at the fact that the energy-saving liquid crystal display is next to useless in bright or subdued light. As long as I'm criticizing, it should be noted that the shift key is too small. The shift gets a heavy workout since it provides for commas, quotation marks and other basic tools. Luckily you can survive the ill sized shift key, thanks to the PC-1500's method of correcting for the fumbling finger phenomenon.

The PC-1500's editing features are a snap to learn. There are keys to move the cursor to the left or to the right. You can insert or delete one character at a time; when editing a program you can scroll up or down, from one line to the next. The one-line display doesn't seem as restrictive when you consider that the 80-character input buffer allows for some pretty long lines. I'm prone to use multistatement lines, so the left arrow key became a good friend as I attempted to find out what lurked just out of sight.

I grew to like the single-line display, finding it easy to concentrate on the pertinent code when I was debugging. Of course if your programs jump around then be prepared to go crazy if a printout isn't available.

Memory Enough

Before launching into a review of "extended" pocket Basic let's take

another look at the PC-1500 innards, in particular its memory. If you own a disk drive you probably thought I forgot a zero when I said that the PC-1500 has 3.5K of RAM. On the other hand, if you have an unexpanded Sinclair ZX-80 you are probably rabidly envious of the Sharp's abundance of memory. In reality, you the user only get to handle 2.6K—900 bytes of RAM are claimed by the system. Just as the omniscient system claims a healthy chunk of RAM, it also dictates how you can use the rest.

Variables A-Z and A\$-Z\$ claim 624 bytes. If you use other variable names like AZ or Q7\$, they are stored at one end of the 1850-byte program memory. Your program starts at the other end and can expand until it meets up with the variables or the 1850-byte limit. Another 188 bytes is listed as reserve area; perhaps it works only one Saturday a month. All this totals up to 2662 bytes—don't ask me where the extra 62 bytes came from. All I know is what I read.

If your thirst for memory exceeds the PC-1500's internal offerings, consider adding on. A port on the computer's backside can accommodate up to 16K of RAM, ROM or a RAM/ROM combination. So far all you have to choose from is the CE-151 4K RAM module (list price \$75) or, for you 10-megabyte Winchester fans, the CE-155, 8K of RAM (list price, \$150). Mass storage, via the optional CE-150 cassette interface, is also available. More on this later.

Pocket Basic

Most of the PC-1500's Basic functions and statements will be familiar

to users of Applesoft or Radio Shack Level II Basic. Table 1 lists the common features. Table 2 is a menu of functions, statements and commands that are likely to be indigenous to the Sharp.

Owners of the trailblazing PC-1211 pocket computer will note the PC-1500's improved string capability, which includes functions like LEFT\$ and CHR\$. Memory allocations for strings have a default length of 16 characters but they can be dimensioned to 80 characters. Or if you need to save memory the length can be set to something less than 16.

Along with its sophisticated string handling, the latest Sharp provides for two-dimensional arrays, up to 255 × 255. Still not impressed? Consider that extended pocket Basic offers both natural *and* common logs, inverse sine and cosine, and angular conversions. You won't find this combination of problem solvers built into Applesoft or Level II Basic.

Another singular PC-1500 function is Time; this allows easy access to the continuous real-time clock, giving you everything from the month to the second. Beep is a Sharp feature that will warm the heart of anyone who has resorted to machine-language code to get noise from his computer. All that Beep requires is three delimiters that govern the number of beeps (1 to 65535 repetitions), the frequency (230 Hz to 7.8 kHz in 256 steps) and the tone duration (zero to approximately two minutes). Unfortunately the Beep tones are as hard to hear as they are easy to program.

If Beep and Time seem like appetizers rather than the main course, con-

The guts of a PC-1500 consist of two double-sided circuit boards that hold a handful of proprietary flat-pack integrated circuits. The battery compartment, lower left, holds four AA cells. A 60-pin connector, top center, brings out data and address lines plus control and timing signals.

The CE-150 printer uses four tiny ball-point pens and a unique mechanical drive to make a versatile unit for plotting lines or printing text. The vertical movement is actually accomplished by moving the paper up and down. It's as simple as it sounds.

Just purchase a
Z-CARD/CPM combo for your APPLE II?

Discover the language system
that fits perfectly in your Apple.
ALCOR PASCAL

SPECIALLY TARGETED. Works in harmony with your z-card/cpm equipped Apple II. No more floppy shuffle. Fast one pass compiler that doesn't generate unnecessary intermediate files which require further assembly.

PROFESSIONALLY DESIGNED. Crafted by a project team with over 15 years of Pascal programming experience. A powerful Pascal that includes all the features necessary for professional program development including random files and dynamic strings.

INCREDIBLE SPEED. Resultant stand alone programs execute 10-20 times faster than the equivalent Basic or up to 4-1/2 times faster than U.C.S.D. programs.

to keep the program rolling. Wait does the same thing as Pause except that you set the length of time the display is held, anything from 0 to about 17 minutes. Careful use of Wait results in a handy way to generate time constants without using a program loop.

No program is perfect the first time it runs, and the PC-1500 reminds you of that with 46 error messages. There are 32 errors associated with the computer itself, five assigned to the cassette interface and nine for the printer. Complementing the error messages is the PC-1500's TRON debugging feature. This lets you trace your program, one line at a time, stopping after each line is executed. TRON can be used as a command or embedded in a program as a Basic statement. Error trapping can be built into your program by using the On Error Goto statement.

Once your program is perfected you can protect it from harm by locking the computer in the run mode. Or, if you wish, lock it in one of its other two modes, program or reserve. Unlock restores normal functioning.

Running pocket computer programs is made speedier by using the Reserve feature. Here is where those 188 bytes of reserve memory enter the picture, along with the six keys located directly below the display. Preceded by a shift key they give the usual ! or "; otherwise these six buttons act as programmable keys. There are three levels of reserve, so you can execute up to 18 different reserve functions, ranging from commands like Run or CLoad to Basic statements like Print and Goto.

Another method for starting program execution is provided by the DEF key. You can store as many as 18 labeled programs in memory, running your choice by pressing DEF followed by the corresponding label key. DEF also allows you to retrieve any of the ten preassigned key words like Input and Goto, saving time when you type in programs. A third application of DEF lets you assign a value to a variable in the PC-1500's immediate mode, then retrieve the defined variable during program execution of an ARead statement.

There is one more method of starting a program. If the first line in your program has an ARUN statement, the program starts up the moment the PC-1500 is turned on. If all of this talk about DEF, Reserve, ARead and

Krell's College Board SAT* Preparation Series NEW FOR 82

A COMPREHENSIVE PREPARATION
PACKAGE / 30 PROGRAMS / \$299.95

1. Diagnostic analysis
2. Prescription of individual study plans
3. Coverage of all SAT* skills
4. Unlimited drill and practice
5. SAT* Exam Question simulator
6. All questions in SAT* format and at SAT* difficulty level
7. Instantaneous answers, explanations and scoring for problems
8. Worksheet generation and performance monitoring - (optional)
9. A complete record management system - (optional)
10. Systematic instruction in pertinent math, verbal & test taking skills - (optional)

Krell's unique logical design provides personalized instruction for each student according to individual needs.

ARun seems confusing, take heart—you can always type Run and be done with it.

Utilitarian Display?

Sharp hands you a graphics display area that is 156 dots long by 7 dots wide. I cannot, in all honesty, figure out what you're supposed to do with this gift. Individuals more creative than I will find four statements and

one function to control the display. CLS clears the screen; that I can handle. The Cursor statement is not very threatening either. All it does is position the cursor at the start of one of the 26-character positions on the display. Very handy if you are printing more than one variable at a time; sort of like a tab key on a typewriter.

It's the next three, GCursor, GPrint and Point, that I have trou-

ACS	\cos^{-1}
ASN	\sin^{-1}
DEG	Converts decimal degrees to degrees, minutes, seconds
DMS	Converts degrees, minutes, seconds to decimal degrees
LOG	$\log_{10}x$
LN	$\log_e x$
PI	3.141592654
POINT	Returns a number describing a dot column in the display
STATUS	Number of program steps already used
TIME	month, day, hour, minute, second

Table 2a. Unique functions of the PC-1500.

AREAD	Display contents becomes specified variable
ARUN	Program executes automatically after power is turned on
BEEP	Sound command, number, length and frequency of tone can be specified
CURSOR	Specifies starting position of display
DEGREE	Specifies angular mode
GCURSOR	Specifies display position by dot units
GPRINT	Controls one column of dots on display
GRAD	Angular mode designation
LOCK	Locks computer's mode
PAUSE	"Semiautomatic" form of Print
RADIAN	Angular mode designation
USING	Controls format of printed variable
WAIT	Specifies duration of display for Print statement

Table 2b. Unique statements of the PC-1500.

CHAIN	When used in an existing program another cassette program is loaded and then executed
INPUT#	Transmits specified variables to tape
PRINT#	Loads specified variable
RMT OFF	Cancels remote function for second tape recorder
RMT ON	Resets remote function for second tape recorder
COLOR	Specifies color of characters printed
CSIZE	Specifies size of characters printed
GLCURSOR	Moves printer pen from starting point to a specified X,Y coordinate
GRAPH	Enables printer to "draw"
LCURSOR	Moves printer pen to desired location
LF	Line feed
LINE	Printer draws a straight line between two X,Y coordinates
LLIST	List program to printer
LPRINT	Prints specified content (like Print)
RLINE	Draws a straight line using existing pen position as the starting point
ROTATE	Specifies direction characters are to be printed
SORGN	Specifies existing pen location as the new point of origin
TAB	Specifies pen position in Text mode
TEST	Executes color test
TEXT	Enables printer to print characters and numerals

Table 2c. Unique commands of the PC-1500.

BUSINESS 100 PROGRAM LIST

NAME

DESCRIPTION

1	RULE78	Interest Apportionment by Rule of the 78's
2	ANNU1	Annuity computation program
3	DATE	Time between dates
4	DAYYEAR	Day of year a particular date falls on
5	LEASEINT	Interest rate on lease
6	BREAKEYN	Breakeven analysis
7	DEPRSL	Straightline depreciation
8	DEPRSY	Sum of the digits depreciation
9	DEPRDB	Declining balance depreciation
10	DEPRDDB	Double declining balance depreciation
11	TAXDEP	Cash flow vs. depreciation tables
12	CHECK2	Prints NEBS checks along with daily register
13	CHECKBK1	Checkbook maintenance program
14	MORTGAGE/A	Mortgage amortization table
15	MULTMON	Computes time needed for money to double, triple, etc.
16	SALVAGE	Determines salvage value of an investment
17	RRVARIN	Rate of return on investment with variable inflows
18	RRCNST	Rate of return on investment with constant inflows
19	EFFECT	Effective interest rate of a loan
20	FVAL	Future value of an investment (compound interest)
21	PVAL	Present value of a future amount
22	LOANPAY	Amount of payment on a loan
23	REGWITH	Equal withdrawals from investment to leave 0 over
24	SIMPDISK	Simple discount analysis
25	DATEVAL	Equivalent & nonequivalent dated values for oblig.
26	ANNUDEF	Present value of deferred annuities
27	MARKUP	% Markup analysis for items
28	SINKFUND	Sinking fund amortization program
29	BONDVAL	Value of a bond
30	DEPLETE	Depletion analysis
31	BLACKSH	Black Scholes options analysis
32	STOCVAL1	Expected return on stock via discounts dividends
33	WARVAL	Value of a warrant
34	BONDVAL2	Value of a bond
35	EPSEST	Estimate of future earnings per share for company
36	BETAALPH	Computes alpha and beta variables for stock
37	SHARPE1	Portfolio selection model-i.e. what stocks to hold
38	OPTWRITE	Option writing computations
39	RTVAL	Value of a right
40	EXPVAL	Expected value analysis
41	BAYES	Bayesian decisions
42	VALPRINF	Value of perfect information
43	VALADINF	Value of additional information
44	UTILITY	Derives utility function
45	SIMPLEX	Linear programming solution by simplex method
46	TRANS	Transportation method for linear programming
47	EOQ	Economic order quantity inventory model
48	QJUEJ1	Single server queueing (waiting line) model
49	CVP	Cost-volume-profit analysis
50	CONDPROF	Conditional profit tables
51	OPTLOSS	Opportunity loss tables
52	FQJQJQ	Fixed quantity economic order quantity model
53	FQJOWSH	As above but with shortages permitted
54	FQJQJQB	As above but with quantity price breaks
55	QJUEJCB	Cost-benefit waiting line analysis
56	NCFANAL	Net cash-flow analysis for simple investment
57	PROFIND	Profitability index of a project
58	CAP1	Cap. Asset Pr. Model analysis of project

59	WACC	Weighted average cost of capital
60	COMBAL	True rate on loan with compensating bal. required
61	DISCBAL	True rate on discounted loan
62	MERGANAL	Merger analysis computations
63	FINRAT	Financial ratios for a firm
64	NPV	Net present value of project
65	PRINDLAS	Laspeyres price index
66	PRINDPA	Paasche price index
67	SEASIND	Constructs seasonal quantity indices for company
68	TIMETR	Time series analysis linear trend
69	TIMEMOV	Time series analysis moving average trend
70	FUPRINF	Future price estimation with inflation
71	MAILPAC	Mailing list system
72	LETWRT	Letter writing system-links with MAILPAC
73	SORT3	Sorts list of names
74	LABEL1	Shipping label maker
75	LABEL2	Name label maker
76	BUSBUD	DOME business bookkeeping system
77	TIMECLCK	Computes weeks total hours from timeclock info.
78	ACCTPAY	In memory accounts payable system-storage permitted
79	INVOICE	Generate invoice on screen and print on printer
80	INVENT2	In memory inventory control system
81	TELDIR	Computerized telephone directory
82	TIMUSAN	Time use analysis
83	ASSIGN	Use of assignment algorithm for optimal job assign.
84	ACCTREC	In memory accounts receivable system-storage ok.
85	TERMSPAY	Compares 3 methods of repayment of loans
86	PAYNET	Computes gross pay required for given net
87	SELLPR	Computes selling price for given after tax amount
88	ARBCOMP	Arbitrage computations
89	DEPRSF	Sinking fund depreciation
90	UPSZONE	Finds UPS zones from zip code
91	ENVELOPE	Types envelope including return address
92	AUTOEXP	Automobile expense analysis
93	INSFILE	Insurance policy file
94	PAYROLL2	In memory payroll system
95	DILANAL	Dilution analysis
96	LOANAFD	Loan amount a borrower can afford
97	RENTPRCH	Purchase price for rental property
98	SALELEAS	Sale-leaseback analysis
99	RRCNVBD	Investor's rate of return on convertible bond
100	PORTVAL9	Stock market portfolio storage-valuation program

ble with. By using the GCursor statement you can direct the cursor to one of the 156 rows of dots (seven dots to a row). From there you can light up any combination of dots in that row with the GPrint statement. GPrint requires a magic number that describes the unique combination you want. Sharp has cleverly assigned the dots a number, starting with one at the top and proceeding downward by powers of two, with the seventh dot being 2^6 or 64.

The magic number is the sum of numbers for dots you want to light. For example, if you want only the top and bottom dots in a particular column to light, use the expression 65 ($1+64$) for your GPrint statement. Want all the dots? Use 127 ($1+2+4+8+16+32+64$). If binary is not your favorite poison, you can use a two-digit hexadecimal number. For the first-last dot combination you would enter 41, and for all the dots just plug in 7F.

Rounding out the collection of graphics control characters is the Point function. Point allows you to sort out the mess you made using GPrint by returning the magic num-

ber that is in effect for a row of dots. A hint of what the display is good for can be found in Sharp's manual of PC-1500 application programs. There

you will find several games with names like Boat Race and Labyrinth Escape that use the display features. I'm still trying to think of a serious software application for this "gee whiz" capability.

Cassette Storage

Unless there is only one program in your life, you are going to be very frustrated using the PC-1500 without its companion CE-150 cassette interface and printer. This accessory, which lists for \$250, will set you back almost as much as the computer. When you hear about the printer you won't feel so bad though.

First things first: Going from disk to cassette storage seemed like a step into the stone age for me. Then I considered the cost of disk drives and disks plus the fact that the darned things crash if you as much as look at them sideways. Perhaps cassette storage isn't so bad after all. The CE-150 makes the transition easy; reliable and simple are the best words to describe its operation. You'll do minimal tinkering with volume controls and, unlike the Apple cassette interface, the CE-150 does the stop-

Mayday™ IS NOW SMART

Mayday has established itself as the best protection against power interruptions to most mini /micro-computers.

Mayday now has all the features you asked for!

- Constant voltage regulated output
- I/O port which tells computer when AC is off
- High, low and charge LED indicators
- Low battery audible alarms and UPS shutdown
- High start up capability for hard disk
- Zero crossing DC feature that handles any type of computer power supply
- New three stage sense circuit that protects from all types of power failure-including rapid inductive kickback

...protection you can afford!

SUN RESEARCH, INC.
BOX 210 OLD BAY ROAD
NEW DURHAM, NH 03855
(603) 859-7110 TWX 510-297-4444

ping and starting. I had no problem using an inexpensive, discount-store variety of cassette recorder; if you really want to go first class consider buying the accessory CE-152 recorder—list price \$100.

A handful of special commands help to make the Sharp interface a winner. Chain is just like its disk-based namesake; the program in memory calls up another program from cassette, with the new program taking over after it is loaded. Chain is helpful in beating the memory crunch if your PC-1500 programs get too long. Input# and Print# let you store and retrieve data files—another memory saver if you require large arrays and lots of strings.

The versatility of a single recorder storage system is doubled when you take advantage of the CE-150's ability to control two machines. The record and play audio comes from the same jacks for both machines; what separates them is the presence of two remote signals. Just type RMT On when you want to use the second machine. If later on you need to load or store something with the first recorder, enter RMT Off. Applications for the dual interface are readily apparent: the program on one cassette, the data on the other, and so forth.

Four-Color Virtuoso

If you buy a PC-1500, take along enough money to get the CE-150 cassette interface and printer. The printer is, in a word, nifty. It's an exciting example of how electronics and mechanical devices can be combined for powerful results. Four tiny ball-point pens slide back and forth across the adding-machine-size paper. The vertical movement is accomplished, not by moving the pens, but by moving the paper up and down. If it sounds simple, don't worry—it is. The smarts behind this printer are in the signals that drive the pen holder and the paper guide.

Because the CE-150 is a radical departure from the daisywheel and dot matrix approaches to printing, the PC-1500's print commands will seem different. You can use either the Text mode (where nine sizes of type are available) or you can drop into the Graph mode (where an X-Y coordinate scheme allows for drawing).

Text commands include the self-explanatory LPrint and LList. LCursor sets the starting position for a line and Tab is just like a typewriter tab when used as part of an LPrint statement.

Sharp Software Modules

Sharp Electronics Corp. will introduce five PC-1500 software modules in late 1982. The modules, which plug into the computer's memory expansion port, include libraries for mathematics, electrical engineering, statistics, finance and graphics.

The mathematics library offers 16 programs, ranging from Fourier analysis to solving linear and nonlinear equations. Sixteen programs are included in the electrical engineering package. Design programs include phase-locked loop analysis,

passive and active filters and Smith chart calculations.

Statistics users will find 18 programs, including calculations of "t" and "F" statistics and eight different kinds of distributions. The Sharp finance library has ten programs that include amortization schedules, forecasting and cash flow discounting.

The PC-1500 graphics module is designed to work with the CE-150 printer and provides 13 programs that can be used independently or as part of other programs.

The real crowd pleaser is CSize. It lets you choose a type size as small as 0.05 inches high and 0.03 inches wide or as massive as .42 inches high by 0.28 inches wide. With the giant size you get only four letters to a line; drop down to CSize 1 and you'll cram 36

characters into 1 1/4 inches.

Upper- and lowercase letter, numbers and the keyboard's special characters like pi and square root are all available. Besides choosing the size of a letter you can select one of four colors with the Color statement. The

A FULL LINE OF SEMIDISKS

S-100

TRS 80 Model 2

IBM Personal Computer

Do you use your computer? Or does your computer "use" you? Face it, if you're using floppies, your time is being wasted. Because a floppy is an inefficient random access storage device. Each time the processor wants to transfer data, it has to wait an eternity for the disk to rotate and the head to move.

So what do you do? Get a SemiDisk, quick. It's a large capacity semiconductor memory board that is driven by software to operate like a disk drive. Without all the waiting. Do everything you'd do on a floppy or hard disk, with no modifications to your software or hardware. Two board sizes are available: 512K and 1 Megabyte. (the highest density microcomputer memory board in the world) And you can put up to 8 megabytes in a system by adding more storage boards.

What do you need to use it? Just an S-100 system with CP/M 2.2. Or a TRS-80 Model 2 system with CP/M 2.2. Or an IBM Personal Computer. That's it. No special processors, DMA, I/O, or disk controllers are required. Plug it in and run the installation program, and you're on your way. Fast! Even better, we supply full source code to the driver software, in case you'd like to do your own interfacing.

Best of all, the SemiDisk's price won't warp your wallet. Compare specs, cost/megabyte, storage capacity, and compatibility with the competition. You'll see that the SemiDisk is a disk emulator truly worthy of the name. SemiDisk has battery-backup capability, too.

Consider our limited warranty: A full year, covering all parts and labor. Consider our liberal 15 day return policy. Price? \$1995 for 512K byte SemiDisk, \$2995 for 1 Megabyte SemiDisk. Both from stock. \$10.00 for manual. VISA, Mastercard, COD orders accepted. Dealer and OEM inquiries welcomed. (Specify system type and disk format when ordering.)

Someday, you'll get a SemiDisk.

Until then, you'll just have to wait.

**SemiDisk

(503)-642-3100

NO WAITING

TM

Call (503)-646-5510 for CBBS™/NW, a Semi-Disk-equipped computer bulletin board. SemiDisk trademark of SemiDisk Systems; TRS-80 trademark of Radio Shack

thumbnail-size pens come in black, blue, green and red.

The nice thing about Text is that it's easy to use. The Graph mode is a bit tougher to master. But once you do—look out; the PC-1500/CE-150 combination will outwork printer/computer combos that cost a magnitude of ten more. The Graph mode uses Rotate to specify the direction of printing: up, down, left or right. LF (short for line feed) lets you move the paper forward or backward. How many other \$250 printers can do that? The forward movement is unrestricted, while backwards travel is limited to about four inches.

Unleashing the Graph power depends on your ability to transfer the desired result into a series of X-Y expressions required by the Line, GCursor and RLine commands. Curved and diagonal lines can be had if you are patient enough to program the computer to perform a multitude of printing steps. Line resolution can be as fine as 0.016 inches.

Only two minor complaints dampen my enthusiasm for the CE-150 printer. The ball point pens dry out if left in the printer. You have the

choice of leaving the pens in and replacing them more frequently, or taking them out for proper storage after each use. Second complaint: The printer is so small that it won't accept a conventional roll of adding machine paper. Either buy the special length rolls from Sharp or rig up an external bracket that will hold the garden variety roll.

Books

A PC-1500 comes with a 164-page instruction manual and a 214-page applications manual. The instruction guide does a nice job of teaching you about pocket computer Basic. Dozens of short example programs are included to show you the way. My only complaint about the instruction guide is its lack of an index—a real pain in the neck when you want to find something in a hurry.

The applications manual offers 51 different programs and includes the operating guides and examples, so programming knowledge is not required. Subjects range from solving first order differential equations to drawing a computer generated flower on the CE-150 printer. Statistical analysis applications are particularly well covered, with a number of the programs taking advantage of the printer's Graph mode. Among the business and home applications is the usual annuity rate calculator and a rather unusual household accounting program. Some of the applications, like the household accountant, require a 4K expansion module, printer and cassette recorder.

Prospective PC-1500 owners may want to invest in the instruction or application manuals before taking the plunge. You can buy them separately from Sharp Electronics Corp., 9 Sharp Plaza, Paramus NJ 07652. The instruction manual is \$4 plus \$1.50 shipping; the application book sells for \$11 plus \$1.50 shipping. A service manual, part number SPC-017, is available too, for \$5 plus the usual \$1.50 shipping.

Work Alikes—The PC-2

Regardless of what Radio Shack and Sharp may state officially, the Sharp PC-1500 and the Radio Shack TRS-80/PC-2 are the same computer. Radio Shack didn't fool anybody when they made slight changes to the keyboard layout. You still get the same number of keys and they perform the same functions. A Sharp

owner will be able to use any of the dozen or more software packages Radio Shack plans to release by early 1983. On the other hand, PC-2 owners may want to visit their local Sharp dealer occasionally to see if the selection of program modules that Sharp has promised are out (see sidebar). No matter what the brand name of your pc, consider picking up a PC-2 Quick Reference Card, Radio Shack part number 26-3601. You'll find error message and programming details at your fingertips with this inexpensive accessory.

Both Radio Shack and Sharp intend to release an RS-232 interface for the PC-1500. All you have to do is choose the one with the best price.

Usefulness Factor

Your pocket computer can be used for the same things that you might use a regulation-size home computer for. It can balance your checkbook, teach your kids a new language and entertain the entire family with wholesome computer violence. Best of all, the PC-1500 is portable; balance your checkbook at the beach, learn that new language while flying cross country or play computer games on your next backpacking trip.

Seriously, there are people who can put a pocket computer to good use. Consider the surveyor—PC-1500/CE-150 in hand, she types in a handful of coordinates describing a plot of land. Seconds later the computer returns the acreage and draws an outline of the parcel. A pocket computer is a godsend for a biologist working at an isolated field station. Now the scientist can log data quickly thanks to the computer-cassette combination. And, if need be, immediate interpretation and printout is available. A more intrinsic reward was found by a computer professional who spends a lot of time traveling and missed the solace of his home computer. Now, thanks to the PC-1500, he can program away his homesickness.

I now believe that advertising hype. The PC-1500 is a real computer. True, it has only a one-line display and it takes a bit longer to run programs. It also has a Basic that puts some low-end home computers to shame. Throw in the printer and you get capabilities unrivaled by anything in the same price range. Convinced? Shop carefully; Sharp's PC-1500 is selling briskly and the dealer with the best price just may be out of them when you call. ■

Game Digest

Edited by Dan Muse

ATARI, APPLE

Deadline

System Requirements: Atari, 32K with disk drive; Apple II Plus, 32K; IBM PC

Manufacturer: Infocom, 55 Wheeler St., Cambridge, MA 02138

Price: \$49.95

Comments: "Deadline is a fantastic adventure game," the review says. "It provides a sense of close involvement, casting you in the role of a police inspector called in to solve a tough case," according to the review.

"The story line is excellent. It reads like a Micky Spillane mystery," the review says. Deadline goes a step beyond a standard text adventure. You are not the only person actively on the scene. You can talk with a number of people or follow them on their daily routines, the review says.

"Adventurers...should enjoy Deadline for the excitement and involvement it offers," the review says. Reader Service number 405.

(Reviewed in Softside, Vol. 5, No 11)

ATARI, PET

The Vaults of Zurich

System Requirements: Atari 400/800, 24K, PET cassette

Manufacturer: Artworx, 150 North Main Street, Fairport, NY 14450

Price: cassette, \$21.95; disk, \$25.95

Comments: In the Vaults of Zurich, you are a master thief. "To win the game you must journey to and from the lower vaults down a maze of corridors, eluding the most sophisticated security system in the world...the ultimate treasure is on the bottom levels," the review says.

"Each vault contains treasures, from Swiss bank notes to Swiss cheese: tools, keys, drills, plans or explosives, plus people—employees or tourists who must be dealt with before you can proceed," the review says.

You have two hours to reach the lowest level—the chairman of the board's office—and then get back to the top level to escape. Reader Service number 409.

(Reviewed in Softline, July 1982)

ATARI

Pac-Man

System Requirements: Atari 400 or 800, 16K, cartridge

Manufacturer: Atari, 1265 Borregas Ave., Box 427, Sunnyvale, CA 94086

Price: \$44.95

Comments: "Several books have been written on how to beat the creatures in this game. Too bad; none of those patterns apply to this version," the review says.

The game can be played on any of eight levels. Beginners can start on the slow cherry level, and advanced Pac-Maniacs can battle on the much-touted key level. The speed of both Pac-Man and the monsters varies on the different levels, the review says.

"Atari's version attempts to duplicate the original arcade game in every detail and Pac-Man looks and sounds like Pac-Man should," according to the review. Reader Service number 402.

(Reviewed in Softline, July 1982)

APPLE

Gold Rush

System Requirements: Apple II, Apple II Plus, 48K, disk

Manufacturer: Sentient Software, Box 4929, Aspen, CO 81612

Price: \$34.95

Comments: "Gold Rush is a new computer game that puts you in another place and time in search of one of the world's most precious treasures, while battling barbarians in the wilderness," the review says.

"Your mission is to find the gold and bring it to waiting mining cars. But the stakes are high, and you have to outmaneuver your enemies at every turn to avoid getting killed or robbed," according to the review.

"The authors of this program have designed a game that will keep you on the edge of your seat. You can't go wrong; you'll love it," according to the review. Reader Service number 403.

(Reviewed in Softline, July 1982)

APPLE

Beer Run

System Requirements: Apple II or II Plus with 48K and one disk drive (DOS 3.2 or 3.3)

Manufacturer: Sirius Software, 10364 Rockingham Drive, Sacramento, CA 95827

Price: \$29.95

Comments: "Beer Run is a hearty brew of a game," the review says. The object of the game is to find and catch the elusive Arterians, according to the review. You accumulate points by collecting beers. The player must avoid the Guzzlers and the Bouncers. "If your runner comes into contact with either, the runner plummets to his death—you are given three runners per game," the review says.

"Beer Runner is witty, well thought out and well executed. The musical sound effects are coordinated to your on-screen fortunes and add a comic relief to the proceedings," the review says. Reader Service number 408.

(Reviewed in BYTE, September 1982)

APPLE

Othello

System Requirements: Apple II, 48K

Manufacturer: Micro-Sparc Inc., PO Box 325, Lincoln, MA 01773

Price: \$19.95 plus \$1.50 shipping/handling

Comments: If you are "tired of all those space games where all that is required are quick reflexes and a fast trigger finger," but which offer no mental stimulation, Othello may be for you.

The game is played on an eight-by-eight board. The pieces used in this computer game are green on one side and orange on the other. "Each player takes turns putting pieces on the board, trying to capture the opponent's pieces. You capture pieces by flanking your opponent's pieces with your own," the review says. For example, if there is an orange piece followed by three green pieces on the board, placing an orange piece after the three green ones changes them all to orange.

"The game becomes exciting by sudden reversals in the lead—you may have six pieces more than your opponent when suddenly with one move, you are seven pieces behind," the review says. Reader Service number 428.

(Reviewed in Nibble, Vol. 3, No. 5)

APPLE

The Pursuit of the Graf Spee

System Requirements: Apple II or Apple II Plus with Applesoft in ROM, 48K, disk drive

Manufacturer: Strategic Simulations, 465 Fairchild Drive, Suite 108, Mountain View, CA 94043

Price: \$59.95

Comments: The game derives its name from the sinking of a German pocket battleship, the Graf Spee, during World War II. "Even if it's an obscure event, it makes a dandy computer game," the review says.

"As the British commander, you have two aircraft carriers, four heavy cruisers, five light cruisers and the battle cruiser Renown with which to find and sink the marauder," according to the review.

"In combat, the Graf Spee is vastly superior to any of the Allied ships except the Renown," so the player must use strategy and tactics to defeat the enemy, the review says. Reader Service number 401.

(Reviewed in Softline, July 1982)

APPLE

Star Blazer

System Requirements: Apple II, Apple II Plus, 48K, disk

Manufacturer: Broderbund Software, 1938 Fourth St., San Rafael, CA 94901

Price: \$31.95

Comments: "World War III is over and the Milky Way is in the grip of the repressive Bungeling Empire. Only one hero can save the galaxy now, and that's Star Blazer..." the review says.

You [Star Blazer] are asked to "fly a dredged-up World War III jet against a radar installation, a pair of supersonic tanks, an ICBM installation and, finally, the Bungeling Empire headquarters," the review says. Reader Service number 404.

(Reviewed in Softline, July 1982)

APPLE

Wizardry

System Requirements: Apple II or Apple II Plus, 48K with one or more disk drives, DOS 3.3

Manufacturer: Sir-Tech Software, 6 Main St., Ogdensburg, NY 13669

Price: Scenario 1: Proving Ground of the Mad Overlord—\$49.45
Scenario 2: The Knights of Diamonds—\$34.95

Comments: "It is inadequate to call Wizardry a game. An 'experience' is a much more suitable label," the review says. Wizardry consists of two scenarios: Proving Ground of the Mad Overlord and The Knights of Diamonds.

"The player may create as many as 20 characters per disk, and may make as many scenario disks as he likes," the review says. "Successful characters may be transferred from one scenario to the next," according to the review.

"Never shall you be faced with a dull moment. The character generation—maze mapping—combat—spell casting—why, it's all Wizardry," the review says. Reader Service number 406.

(Reviewed in Softside, Vol. 5, No 11)

APPLE

Zero Gravity Pinball

System Requirements: Apple II with 48K; Applesoft in ROM or language card, one disk drive, DOS 3.3 or 3.2, game paddle 0

Manufacturer: Avant-Garde Creations, PO Box 30160, Eugene, OR 97403.

Price: \$29.95

Comments: "Zero Gravity Pinball is an original and unique game that makes excellent use of the Apple's graphic capabilities. It may be one of the best tests of eye-hand coordination around, as well as being a lot of fun," the review says.

"The levels of play range from 1 (slow) to 5 (masochists only)," the review says. "Once you've accumulated 50,000 or more points with the five balls you are allotted, it's time to move up to the next level of difficulty, because a score of more than 64,000 points ends the game," according to the review.

"The quality of the graphics and animation is excellent," and the sound and color are good, according to the review. Reader Service number 407.

(Reviewed in BYTE, September 1982)

Learn the Password To This Arabian Nights' Adventure

Ali Baba and the Forty Thieves

An Arabian adventure
Complete with
Elves, halflings and dwarfs

If you have ever dreamed of finding great treasures of gold, fighting battles against evil and rescuing a fair princess, Ali Baba and the Forty Thieves may be the adventure game for you. It uses high-resolution graphics and sound, as well as text, to take you on your journey.

The main goal of this adventure is to rescue the Sultan Shahriar's daughter, the Princess Buddir-al-Buddoor, from the thieves who have abducted her and stashed her away somewhere in the thieves' mountain. I say main goal because while you are investigating the different rooms and finding all the treasures, it is easy to forget why you are there.

This adventure was made for those who do not want to read a long manual, but just want to load and go. After the program is loaded you simply follow the prompts on the screen and begin. The program also outlines the different objects in the room for the first several turns to help you in determining what each item is. Its description can be found in the text window.

There are 17 alter egos that you can use which makes this game playable for up to 17 adventurers at one time. If you want to play solo you have the option of controlling up to 17 characters by yourself. At your command are humans, elves, halflings and dwarfs. All have unique characteristics which enable them to be helpful in different situations. In the 100 plus hours that my wife, friends and I have invested in this adventure I have learned not to go anywhere without Jatte, the strongest dwarf of the

Sultan's Elite Corp. He has become an invaluable asset to me when battling thieves, dragons and enchanted statues.

As in most adventures, there are many clues to aid you in your task. There are owls who prefer to run rather than fight, and will quite often flee through a secret passage which is unseen to the adventurer. You will also find rune writings to aid you. To read them simply move your character onto the rune and the message will appear on the screen in an Arabic font with music to add to the setting. The

This adventure
was made for those
who do not want to read
a long manual,
but just want
to load and go.

writings are very useful and are often very cryptic (to rescue the princess unaided attack only the unseen).

On occasion the rune will burst into flames after you have read it and may injure the adventurer. Should this happen you need only to use the rest option provided on the screen and the character will heal and regain his strength. Use this option whenever possible as you will need your full strength for the many battles you will have. You can monitor your character's health, wealth, power and other useful traits through the use of the many options available to you.

As with most other adventures, there are many areas to investigate. There are wandering monsters, enchanted statues, thieves and dragons that are programmed to keep you from succeeding in

your task. You can usually determine your level of the mountain (there are four) by the type of wandering monster that you encounter. They may wander about a level but not between the levels. You can also stop into a trading post where you may buy armor and weapons for battle. The price for these items will double, triple and quadruple on each successive level. The weapons and armor are also more powerful when purchased on the upper levels so if you can amass large amounts of gold it will pay to wait until you reach the higher levels.

This adventure is not the kind that once solved will be relegated to the drawer to collect dust. It has variables such as the wandering monsters which can appear anywhere on their level. It offers a rather unique feature—the monster rebirth rate. With this you can select the rate at which the evil beings you slay are reborn to fight you again. Also, in an effort to keep things reasonably fair you can reincarnate any of your players. You can also add a player and have him start in the same room with you. These are two of the most valuable options in this game.

This game will probably not be solved in the first sitting, so the save-game feature comes in very handy. The 24-page manual is well written and useful as a reference as the game progresses. Also this program is not sexist; there are both male and female characters to choose from.

This is a very good fantasy/adventure game. It is easy enough for the beginner adventurer to learn and difficult enough for the seasoned adventurer. The game is available for the Apple II, and Apple II Plus, with 48K; and for the Atari with 32K. (Quality Software, 6660 Reseda Blvd., Suite 105, Reseda, CA 91335. \$32.95)

Juggler

A fun-filled
But nonviolent
Game for kids

Juggler will probably appeal mostly to children under 12 years of age. As the game implies, the object is to juggle objects. How long? As long as you can. Your reward? Points.

Each game allows three jugglers. Balls, pins and something else I couldn't recognize are to be juggled. The game begins by selecting a skill level. Six objects are then shot into the air, one at a time. Once all are up, they gently bump into each other and slowly float down.

Your job is to position a juggler under the objects. The juggler throws various "magic beans" (size and height depending on skill level) into the air which knock the juggled objects back up. If one of the balls or pins hits the ground, action stops (with what sounds like a Bronx cheer) and the next juggler is brought out.

The game can be controlled by either keyboard left-right arrows or a game paddle. The game paddles work better for me, since the juggler stops at the setting of the knob anywhere in the playing area. When the keyboard is used, he starts moving in the direction of the arrow key, but only stops when the game boundary is reached or the opposite arrow key is hit; this is slightly more difficult.

Animation and sound effects (which can be turned off) are generally good. The sounds chosen for this game seem particularly appropriate. The jugglers have only two postures; these alternate as the juggler moves side to side giving a walking effect. A circus tent is used for a backdrop.

The action of the game has some interesting aspects. Apparently this game is taking place on the moon, or else the laws of gravity have been repealed. The juggled objects float down like feathers—most of the time. On one occasion I found three balls hanging in space, side by side, for nearly five seconds.

Also, the elastic modulus of the balls and pins is something out of the ordinary because they can bang against each other for long periods of time without apparent loss of energy.

I like the prompt during boot describing how to make a "sterile" copy of the disk. Undoubtedly some people will spread a few bootleg copies around but for us law abiding types, being able to get a backup copy with a routine built into the game is certainly an asset. Thanks, IDSI, for both the courage and consideration.

As an adult, I did not find the game one which I would like to play very often.

Game action is relatively slow, and the reward for excellence is only a slowly accumulating score next to the timer. (If you have one juggler on the field for more than 60 seconds, the game automatically moves you to the next skill level.)

However, if you have kids in the 12-and-under-age group that have access to your Apple, I think this is a good, nonviolent game which belongs in their library; my kid-game testers gave it an excellent rating. (*Innovative Design Software, Inc., PO 1658, Las Cruces, NM 88004. \$34.95*)

Jim Hansen
New Boston, NH

... kid-game testers
gave (Juggler) an
excellent rating.

Shuffleboard

Caroms and collisions
Abound in this
Game for Apple II

Shuffleboard, as the name implies, is a version of sidewalk shuffleboard adapted for use on an Apple II. Not being a sidewalk shuffleboard player myself, I cannot vouch for the authenticity of this version, but it seems to match fairly closely the shuffleboard games I've played at the local pub.

The game is done in high resolution graphics and features sound effects simulating (nicely, I thought) pucks in collision and going over the side. A cheery "TA-TAA!" is sounded whenever a puck hangs over the outside borders scoring extra points. The computer seemed able to do this more often than I could.

The game begins by placing an overhead view of a shuffleboard court on the screen, accompanied by a short musical fanfare. If requested, a demonstration of shuffleboardery is run: the computer shows a collection of shots, nothing too out of the ordinary.

Two versions of the game, Tally All or Cutthroat, may be played. The primary difference is in the scoring. Cutthroat, which sounds more interesting, is my favorite. In this game turns are alternated, and the player with the puck closest to the far end is the only one to score. Only those pucks beyond any of the opponent's are counted. So the strategy here is to be the one with a puck hanging over the far end, and hopefully a few more

beyond the competition's.

Shuffleboard also allows two humans to play, but the computer is plenty of competition with the added advantage of not having to wait between shots while someone figures his next one. Typing a "U" or "D" (for up or down) moves both the puck and aiming cursor up or down (side to side on the court); the left and right arrow keys are used to move only the cursor. An added piece of class here is that the cursor actually moves in an arc whose center is the middle of your puck. A clear plastic ruler is useful in precisely aiming your shots.

After you have lined up your shot a space is typed. This starts an asterisk moving between "slow-medium-fast" on the speed selector. As you can clearly imagine, tightly controlled velocity on your puck would give incredible and boring accuracy. The velocity in Shuffleboard is selected by simply typing an "S" after the space. The asterisk stops at its current location and the puck is launched. This way you don't get to choose the speed exactly, and human variables actually control your side of the game.

This is not so for the computer. It basically doesn't miss, and seems to delight in bashing your pucks around or hanging one of its own over the outside corner of the 4 square.

The game is fun, and when you augment your aiming with a ruler to line up your pucks, the computer has its hands—or should we say algorithms—full. I have had no trouble—errr, on occasion that is—in knocking three of the computer's pucks off the board by caroming my last shot just right. (Of course, I wouldn't want to explain how I got in that position in the first place!)

The manual packed with Shuffleboard is an attractively printed seven-page booklet that simply and clearly outlines Shuffleboard and how to run it. The first paragraph of the warranty statement indicates that IDSI isn't going to be held responsible if you lose money wagered on this game. They seemed pretty serious about it, but I found the idea of someone suing them for betting and losing on a game like this rather humorous.

The game is fast, satisfying, and has a good manual and good human engineering. Kid-wise, I would say it is most likely to appeal to analytically minded young adults over 12 years of age. IDSI is to be thanked for providing a built-in routine for generating backup (sterile) copies of the disk, a convenient and thoughtful feature for their customers. I liked Shuffleboard and think you will too. (*Innovative Design Software, Inc., PO Box 1658, Las Cruces, NM 88004. \$34.95*)

Jim Hansen
New Boston, NH

A Serious Game Machine

The Atari 400 has all the tools—sound, color and graphics capability, as well as an abundance of software—to outfit the game gladiator for combat.

By Richard D. Prill

The sound, colors and graphics of the Atari 400 make it perfect for the serious gamer. It is the next step for those who want to graduate from TV games systems.

When you bring your Atari 400 computer home, the ease of setting it up may astound you—especially if this is your first home computer. The Atari 400 comes with a power supply and a TV/computer switch box. The power supply just plugs into the wall. You place the other end of the cord into the power jack on the side of the computer. The TV/computer switch box connects to the VHF inputs on the television. It is switchable so that the same television can be used for both the computer and regular viewing without having to disconnect and reconnect cables. Having a TV is a necessity because the Atari 400 cannot be used with a video monitor.

After the unit is hooked up and the TV is turned on to channel 2 or 3 (whichever is not used in your area), you will see a blue screen and the words Atari Computer Memo Pad. On this you may type messages and learn to use the editing control key to help familiarize yourself with the keyboard. Other than that I have found no other use for it because what is typed cannot be saved and recalled later.

The Atari 400 does not come with a language cartridge so if you plan to use the 400 with anything except plug ROM programs you will need to buy one separately. These cost about \$60 and should be available where

you purchased your computer. Atari has a kit called the Programmer which contains the Basic cartridge, the Atari Basic reference manual and a self-teaching book on Basic.

With the Basic cartridge in place you are ready to learn, or program, in Basic. The language is fairly clear and easy to learn at the beginning. It does get more difficult as you advance, but one of the advantages of Basic is that you don't have to be an advanced student to write useful programs. The Atari Basic error codes will normally put you on the right track should you make a mistake.

Atari is highly praised for its graphics and rightfully so. The Atari 400 is capable of some fantastic graphics which enhance both adventure and arcade games. It has a high resolution of 320 × 192 pixels (blocks available on the screen). The Atari 400 also has the capability to produce 16 colors at 16

intensities, giving it 256 color capability. The 400 can also produce a wide variety of sounds ranging from bombs exploding to birds singing. These capabilities make the Atari 400 a formidable challenger in the computer gaming market.

The Entertainer kit by Atari is a must for the game player. It contains joysticks and two plug-in ROM game cartridges, usually Star Raiders and Missile Command. Star Raiders by itself is almost enough reason to buy an Atari 400. This game is interesting, action-packed, demanding, and makes full use of the sound and graphics capabilities of the computer.

Two other "kits" are available from Atari at present. They are the Communicator and the Educator. The Communicator comes with an Atari 850 interface module, Telelink I cartridge and an Atari 830 Acoustic modem. With this kit the world of

For the beginning game player, the Atari 400 is a perfect choice.

Address correspondence to Richard D. Prill, 5229 NE 18th Terrace, Pompano Beach, FL 33064.

telecomputing is opened to you. You can access databases such as the Source, CompuServe, Dow Jones stock information service and a multitude of other databases. They can usually be accessed through a local phone number and offer such items as newspapers from around the country, electronic mail and shopping and games.

The Educator package contains an Atari 410 cassette program recorder, the Basic language cartridge and an educational cassette called States and Capitals. Take note that if you already own the Atari Basic cartridge, buying this kit will be an unnecessary expense. You will want to purchase a 410 recorder and they are available separately for about \$90.

Add-on peripherals for the Atari are numerous. The 410 program cassette recorder, as mentioned above, is used for loading and saving programs to cassette tape. You cannot use a common cassette player due to the special built-in cable attached.

Atari also has a disk drive, the Atari 810, which is available for about \$600. It uses 5¼ inch single-density, soft-sectored, floppy disks. The disk

Atari has many programs available for its computers in cartridge, cassette and disk form.

system allows you to save and load data at a rate of speed far above that of the 410 recorder. As you become more serious about your computer, you will find that a disk drive is a must.

One of the most important things to consider before buying a computer is software availability. Unless you can program it yourself, it will do you no good without commercially available software. Atari has many programs available for its computers in cartridge, cassette and disk form. In addition, there is the Atari Program Exchange (APX) where third party programs are available through catalogs. Many of them are quite good and all are reasonably priced. They

are rated and their use is explained in the catalog. In addition they tell you what type of equipment is needed to run the program.

There are many software houses releasing programs for the Atari from simple educational games for children to sophisticated business programs. Arcade game players will probably not be able to keep up with the amount of games available.

Another type of game available for the Atari is the adventure game, to which I devote most of my computer time. These are role playing games where you assume the character's identity and go off to do great things such as rescue princesses, slay dragons and find great treasures. Some are text-only adventures and more recently they have been released with sound and graphics. The only drawback to these is that they normally require a minimum of 24K. The Atari 400 can be upgraded to 48K with boards by other manufacturers, but this will immediately void your warranty, so wait until it expires before you upgrade.

I believe you will find the Atari 400 one of the best in its price range. ■

Nanos System REFERENCE CARDS

For Models I, II, III, Color, Pocket and Apple II & II Plus

At last! No more flipping through the pages of the Basic manual! No more working through the maze of machine language instructions! These cards completely summarize the Basic and Assembler manuals!

FEATURES (on most cards):

memory map, eyeball graphics, math instructions, basic commands, store instructions, basic functions, load instructions, basic statements, move instructions, special keys, exchange instructions, print using examples, shift instructions, basic special characters, compare instructions, basic and assembler messages and codes, branch instructions, basic facts, data alteration instructions, reserved words, I/O instructions, ROM routines, complete character chart with graphics and space-compression codes, hex-dec chart, control code cross-reference, assembler instructions commands and operators, screen line layout, editor commands & subcommands, condition code easy access.

Model I: BASIC only FC1001	\$2.95
Model I: BASIC and Assembler FC1002	\$4.95
Model II: BASIC and Assembler FC1005	\$5.95
Model III: BASIC only FC1004	\$3.95
Model III: BASIC and Assembler FC1003	\$5.95
Color: BASIC and Extended FC1006	\$4.95
Apple II & II plus BASIC FC1007	\$3.95
Apple II & II plus BASIC & 6502 FC1008	\$4.95
Pocket: BASIC only FC1009	\$2.95

NEW

Z80 Machine Language	\$4.95
Model II: SVC	\$2.95
Model II: Commands and Utilities	\$3.95

Prices do not include shipping and handling charges. Sorry no COD orders. Use the order card in this magazine to order. Allow 4-6 weeks for delivery. Shipping and handling for cards only \$1.00 per order.

We don't care which computer you own. We'll help you get the most out of it.

**CompuServe puts
a world of information,
communications, and
entertainment at your
fingertips.**

CompuServe is the versatile, easy to use interactive videotex service designed especially for the personal computer user. It's dynamic, growing and changing daily to satisfy its subscribers' needs. It's an industry leader, created and managed by the same communications professionals who provide business information and network services to over one fourth of the FORTUNE 500 companies.

From current events to current assets, CompuServe offers a wealth of useful, profitable or just plain interesting information.

Electronic magazines and national news wires plus worldwide weather, current movie reviews, electronic banking and shop at home services, and some of the most sophisticated financial information available are all offered to current subscribers.

From words to music. CompuServe offers a communications network that gives special

interest groups from hardware enthusiasts to computer composers a chance to get together. There's a bulletin board for selling, swapping, and personal notices and a CB simulator for real-time communications between subscribers. There's electronic mail, the fastest, surest, way to communicate with other users across the street or across the country, plus file retention and editing, and lots, lots more.

Fun and games are expected whenever computer users interact, and CompuServe has the best. Games you can play alone or with other CompuServe subscribers anywhere in the country. Classic puzzlers, sports and adventure games, and fantastic space games featuring MegaWars, the "ultimate computer conflict."

But, that's just the tip of the chip. CompuServe offers a menu of thousands of items that make subscribing educational, fun and sometimes downright profitable. If you'd like to know more about CompuServe, call toll free, 800-848-8990 to receive an illustrated guide to the CompuServe Information Service. A videotex service for you no matter which computer you own.

NEW!

Kiss the 5¼" floppydisk goodbye!

Amdek has revolutionized data storage for personal computers with the new AMDISK-3 Micro-Floppydisk drive system. The system consists of 2 drives and a power supply, fully compatible with 5¼" floppy disk drives. The 3" disk is encased in hard plastic, protected from dust and fingerprints, and it's easy to mail.

Just write, or call to receive our data sheet on the new AMDISK-3 Micro-Floppydisk Cartridge system.

- 1 Megabyte (unformatted) storage capacity.
- Track-to-track compatible with 5¼" floppy-disk drives.
- 3" shirt-pocket sized disk cartridge.
- Drive has built-in power supply.

Conquering the Cube

By Jim Hodsdon

Does your cube have you beat? This month's Rubik's Cube simulation and solution is for the Heath computer.

It has been my basic philosophy that, given enough time and money, one can make a computer do anything. So I decided that, instead of spending from \$5 to \$9 on a gimmick, I would program my poor unsuspecting H8 computer to simulate a Rubik's Cube for me.

The program, written in Benton Harbor Extended Basic, has grown to over 700 lines, not including comments, and will solve a scrambled cube for you. I call it Autosolve.

The first step was to decide upon some systematic notation for the nine squares on each face of the cube. My approach has been to use numbers since that seems to be what a computer is best at.

The center square of each face is numbered 0.

Now to number the rest of the squares. Using the face that faces you as you contemplate the cube, start with the left top corner and go clockwise, numbering each face square from 1 to 8.

Just to be logical I assigned "+" to designate clockwise and "-" counter-clockwise.

In a problem of this sort it seems best to develop as much symmetry as possible. The unlucky cube's three-dimensional structure imposes a limitation: when the relationship between adjoining faces is made symmetrical, the relationship between the opposite faces cannot be made so... and vice versa.

The following scheme seems to work out fairly well. First, a definition for the faces:

- Facing you is the front face, designated F;

- The face to the right is R;
- The face to the left is L;
- The face behind is B;
- The face on top is U (for Up);
- The face on the bottom is D (for Down).

The following numbering system will

serve as a guide in entering a cube configuration for the program, or solving it: The numbering of the F face is described above. When this is done, turn the cube 90 degrees to your left. This brings the R face to the front. Number it exactly as you did the F face. Turn the cube back 90 degrees so the F face is to the front.

Now tip the cube 90 degrees forward to put the F face on the bottom. The U face is now facing you. Number it the same way as the others. Now tip the cube back 90 degrees so the F face is again facing you.

Now turn the cube 180 degrees to the left. This brings the B face to the front. Number it exactly as you have the others. Turn the cube left 90 degrees so the L face is to the front. Yes, number that the same.

Turning the cube another 90 degrees to the left brings the F face back to the front. Tip the cube 90 degrees back so that the F face is on top. Now you can number the D face, which is facing you.

AutoSolve

In what I hope is a good structured programming technique, the solution is broken down into a number of steps:

The first step is to position the "edgies" on the U, or upper face. This results in a cross pattern. Squares numbered U-2, U-4, U-6 and U-8 are moved into place.

The second step is to position the corners of the upper face: U-1, U-3, U-5 and U-7. This completes the upper layer.

The next stage is to fill in the middle

horizontal band. This is done in two steps. The first is to reposition, if necessary, any edgies that are already in the middle band but not where they belong. The next step is to move any strayed edgies from the bottom layer into their proper places.

The last stage involves only the bottom layer. The first step of this stage is to get the corners into their proper locations but not necessarily in proper orientation. Then do the same for the edgies. The third step is to "twirl" the corners and the last is to "flip" the edgies as required to form the perfect cube. Voila! The cube is solved.

Notes on Operating KUBE

The entry for a move should be in the form (sign) (face code) (number).

(sign) is + for a 90-degree clockwise rotation, - for a 90-degree counter-clockwise rotation.

(face code) is a single letter for the face to be rotated.

(number) can be blank, 1, 2 or 3.

- Blank defaults to 1.
- 1 represents a 90-degree rotation.
- 2 represents a 180-degree rotation. (The sign doesn't matter in this case.)
- 3 is equivalent to a 1 with the opposite sign.

Address correspondence to Jim Hodsdon, Fox Run Lane, RFD 3, Newtown, CT 06470.

Last month's "Conquering the Cube" article was submitted by Kenneth Cooper, 1108 Clevenger Road, Ontario, N.Y. 14519.

Three more moves, in addition to the face moves, are available:

- H rotates the horizontal mid-band clockwise front to left.
- V rotates the front vertical mid-band clockwise front to up.
- S rotates the side vertical mid-band clockwise left to up.

Notes on the Program

None of the REM statements are required to run the program.

With all possible spaces squeezed out, the program requires slightly more than 32K bytes of memory on the H8 with the Benton Harbor Extended Basic; 40K bytes should handle it. If you have only 32K bytes of memory, you can run by separating the last portion of the program starting with statement 8000.

This section handles the input for your own cube configuration and can be chained in when needed.

To chain the last section make the

following changes to the program:

- Change statement 310 from GOSUB to a chain command.
- Drop out statements 8200 to 8220.
- Change statement 9360 from RETURN to CHAIN "KUBE", 330.

The array KS(N,M) is the mainstay of the program. Each element contains the original color code and position number of the square currently at the location designated by the subscripts N and M. N indicates the face and M indicates the position on that face.

The SS(array contains sequences of moves designed to change the position of specific squares with a minimum of disturbance to the rest of the cube.

Autosolve uses these sequences by positioning the squares so that an appropriate sequence can be used. For example, to move a square from the bottom layer to front 4, right 4, back 4 or left 4, four steps are required.

1. The middle layer is rotated with +H to

bring the desired destination square to position front 4.

2. The square to be moved is maneuvered to position front 6.

3. +X16 is executed.

4. Finally the middle layer is returned to its original location with -H.

You can see how these sequences operate by starting with the standard "perfect cube" and entering the X code. You may add your own sequences by changing the value of SO and the DIM for SS(in statement 90. The program allows a maximum of 99 and there is room to add these after statement 164.

If you would like to change any already-defined sequences, do not change the function of the ones used by Autosolve. They are referenced in the section 3300 to 7280.

The program is made up of separate sections for each function. These can be identified by the REM statements before each section. ■

GEMINI— FOR PRINTER VALUE THAT'S OUT OF THIS WORLD

Over thirty years of down-to-earth experience as a precision parts manufacturer has enabled Star to produce the Gemini series of dot matrix printers—a stellar combination of printer quality, flexibility, and reliability. And for a list price of nearly 25% less than the best selling competitor.

The Gemini 10 has a 10" carriage and the Gemini 15 a 15½" carriage. Plus, the Gemini 15 has the added capability of a bottom paper feed. In both models, Gemini quality means a print speed of 100 cps, high-resolution bit image and block graphics, and extra fast forms feed.

Gemini's flexibility is embodied in its diverse specialized printing capabilities such as super/sub script, underlining, back-spacing, double strike mode and emphasized print mode. Another extraordinary standard

feature is a 4k buffer (with an additional 4k on the serial board). That's twice the memory of leading, comparable printers. And Gemini is compatible with most software packages that support the leading printers.

Gemini reliability is more than just a promise. It's as concrete as a 180 day warranty (90 days for ribbon and print head), a mean time between failure rate of 5 million lines, a print head life of more than 1 million characters, and a 100% duty cycle that allows the Gemini to print continuously. Plus, prompt, nationwide service is readily available.

So if you're looking for an incredibly high-quality, low-cost printer that's out of this world, look to the manufacturer with its feet on the ground—Star and the Gemini 10, Gemini 15 dot matrix printers.

NF SYSTEMS LTD. PRESENTS:

HOSTCOMM by JANADON

The Personal Host Communications System

★ Features:

- The first Host communications system for the IBM Personal Computer
- Run programs from a remote site with a terminal or another computer
- Use as a personal communications system or electronic mailbox
- Full Upload/Download facility for ASCII files
- Easy set-up, installation, and especially easy to use
- Full system operator support
- Three level password protection
- Unattended operation

★ Minimum Systems Requirements:

- 64KB System Unit
- 320KB Diskette storage (1 or 2 drives)
- PC-DOS 1.0 or 1.1
- Video Display (40 or 80 characters)
- Printer
- Asynchronous Communications Adapter
- Hayes Stack™ Smartmodem

Introductory Offer Now: \$125.00
List Price \$139.95

NOW AVAILABLE FOR THE APPLE II

Ali Baba and the forty thieves

By Stuart Smith

**A fantasy role-playing adventure for
Apple II and Atari Personal Computers.**

Encounter sultans, thieves, fierce and friendly creatures as you guide your alter ego, Ali Baba, through the thief's mountain den in an attempt to rescue the beautiful princess. Treasure, magic, and great danger await you! One or more human players can guide up to seventeen friendly characters through the many rooms, halls, and caves. Some characters wander around randomly, making each adventure a little different.

ALI BABA AND THE FORTY THIEVES is written in high resolution color graphics and includes music and sound effects. Adventures can be saved to disk and resumed at a later time.

Available for Apple II and Apple II Plus 48K or Atari 800 32K.

On diskette only — \$32.95

6660 Reseda Blvd., Suite 105, Reseda, CA 91335 (213) 344-6599

Nearly 200,000 people gathered for three days in a dusty, sweltering valley in San Bernardino, CA, to see 19 rock acts and eight circus tents filled with the latest developments in computer technology. The Us Festival was the brainchild of Apple inventor Steve Wozniak, who made sure the event was working. "I've been walking around myself, talking to thousands of people," he said. "I even tested the 'porta-john' to make sure there were no lines." (Kelly Canale photo.)

What do rock concerts and micro-computer exhibits have in common?

They both were featured at the recent Us Festival (Sept. 3-5 in San Bernadino, CA). The event was spearheaded by Apple king Stephen Wozniak, who attempted to promote the marriage of rock music and computer technology.

The Us Festival had several strikes against it from the start. Skeptics doubted that Wozniak could pull off an event of such magnitude, and even if he did, there was a chance that he'd take a financial loss.

But even with a relentless sun scorching the festival site at 100-plus degrees, and even with enough dust swirling about to choke 200,000 people twice, and even with a large group of angry journalists (irate over the poorly-planned press privilege policy), the Us Festival came off smoothly.

Make no mistake—the concerts took center stage at the festival, but computer technology was well represented.

Few of the nearly 200,000 Us Festival patrons on each of three days came to see computers. But most of them *did* wander through at least a few of the tents—whether it was out of a need for relief from the heat or out of sheer curiosity—to find mostly games and graphics.

Simplicity and fun were the overriding themes of the Technology Fair. In one of the eight circus tents devoted to computer-related displays, a row of real

live 25-cents-a-shot video games passed for technology—and made a lot of money at the same time.

Still, most exhibitors managed to present worthwhile introductions to computers.

Lucia Grossberger and Harry Vertelney, authors of Designer's Tool Kit software for the Apple II and founders of Eclectic Electric, set up a gallery-type booth showing off the fusion of artwork and computers.

A 15-foot robot was used in Battlefield Earth display. (Larry Canale photo.)

Eclectic Electric's computer art is accomplished on a kind of electronic easel that's used to reproduce photos or drawings or to create new images on a computer.

The work displayed at the Technology Fair came from several artists, including Grossberger and Vertelney, as well as from physicist Bob Bishop (author of *Creative Tools* and one of the first research and development engineers at Apple), Ron Pellegrino (author of *The Electronic Arts of Sound and Light* and president of Electronics Arts Productions) and Scott Kimm (author of *Inversions: A Catalog of Calligraphic Cartwheels*).

Grossberger said she helped launch Eclectic Electric two years ago.

"We wanted to see what we could do with personal computers," the artist said. "I believed that you could have art on a floppy disk."

Grossberger's own artwork includes recreations of rock stars and album cover art. Some of her efforts were displayed on a 20-foot video screen that hung high above the Us Festival amphitheater stage.

Making imagistic music is the name of the game for Author Services, Inc. (ASI). The Hollywood-based corporation specializes in advancing the concept of movie soundtracks into book soundtracks.

Battlefield Earth, an epic by L. Ron Hubbard, is the first book to be put to music. Hubbard himself composed the

Steven Wozniak, right, shown with concert promoter Bill Graham, put \$12.5 million into the Us Festival; he started Apple with \$300. (Larry Canale photo.)

Eclectic Electric's computer art included this reproduction of rock group Santana's latest album cover. (Larry Canale photo.)

music, which is flavored with natural sounds and rhythms that come from a computer.

His book, set in the year 3000, involves a man who organizes a few surviving humans to overthrow an alien race that had taken over Earth 1000 years earlier. The accompanying music, classified as "computer space jazz," involves the use of a Fairlight to record, store and play on a keyboard any type of natural sound.

A Fairlight, explained Vaughn Young, who works with ASI public affairs, is a "computer designed to be a musical instrument." The Fairlight, on display at the Us Festival, allows musicians to play in sequence—or to blend the sounds.

"We're trying to enhance both the book industry and the music industry," Young said at the Technology Fair, "because both have felt threatened by computers. What we're doing is making a record of this book; we're making a musical score as if it was a movie."

"We're trying to show that the technologies are not different," he added. "It's a new concept for music. And the computer industry needs this market."

Several other music-related products were displayed at the Us Festival.

The Alpha Syntauri Synthesizer, an all-digital, programmable music system, includes a keyboard controlled by an Apple computer. It's run via a natural inter-

NEW Introducing :

STAR TRAP

an ACTION packed video game of STRATEGY and SKILL for TWO PLAYERS

for ATARI home computers with 32K memory and two joy sticks. 

You are fighting your enemy in unstable space. With the shock of every missile explosion, deadly hyperspikes break out. Contact with hyperspikes causes instant disintegration. As you tunnel through space-time, weaving in and out of hyperspikes, WATCH OUT for rammers and space mines. Be on the lookout for the sudden appearance of smart bombs and streakers on your tail. The only way to come out alive is to trap your opponent in a cage of hyperspikes. Try it— with a friend.

INTRODUCTORY OFFER

Only \$19.95 (on disc or cassette)

THE LEMONTM SOURS SURGES

Our crop-The LemonTM, The LimeTM, and The OrangeTM are designed to eliminate undetected submicrosecond overvoltage transients from electrical circuits. Commonly referred to as "spikes", or "glitches", these transients can cause hardware and software damage to unprotected circuits.

Today's electronic products are often microprocessor controlled - mini and micro computers, televisions, video cassette recorders - to name a few. Each of these products is sensitive to fluctuations in electrical power lines. Power switching devices such as refrigerators coming on and off or air conditioners starting up can be responsible for a momentary surge or spike of electricity in a circuit. Even your local

utility stepping-up transformers to add power at peak load times or an electrical storm passing through can trigger surges. Such surges can cause equipment to falter at times, not to work at peak performance or fail completely. An entire data base can be lost.

Now you can prevent this from happening to you with an AC Surge Protector from Electronic Protection Devices. Each Protector is a solid state clamping device with 6 outlets utilizing modern high speed semiconductor technology. Using our Protectors is as simple as plugging it into any standard three wire duplex outlet then plugging what needs protection into it. Each Protector exceeds the IEEE 587-1980 Guide for Surge Voltages in Low

Voltage AC Power Circuits.

When you compare the cost of computer hardware, software and your time with the price of a Protector (from \$59.95 to \$139.95), you'll want to sour your surges with one of the AC Surge Protectors from EPD, which are available through your local dealer.

Electronic Protection Devices

Synthesis Module added human voices to games. (Larry Canale photos.)

action between the computer and a clavier keyboard.

The modular designs of Alpha Syntauri are compatible with plug-in hardware; software modularity allows the addition of expression.

"With new technology, there's so many possibilities of things we can do," jazz keyboardist Herbie Hancock told fans crammed into the Technology Fair's main theater tent. Hancock gave an impromptu performance using the Alpha Syntauri after he spoke to the audience.

Also on display was the Soundchaser,

which serves not only as a polyphonic synthesizer but as a multi-track recorder, computer-aided instruction device and music transcriber.

Soundchaser Computer Music Systems features Apple II-compatible hardware as well as software that actually writes down music notes as you play and edits music you've already written.

Other features at the Technology Fair included displays of the Apple III Personal Computer System, the 212 Apple-Cat II modem, the Dow Jones News & Quotes Reporter and Dow Jones Portfolio

Evaluator (both Apple II-compatible) and Artsci's Magic Window (also Apple-compatible).

The VIC-20 Personal Computer was displayed, along with the Victor 9000 Business Computer Manager Series, the Osborne I, the Infone portable computer terminal and the System One computer graphics program.

Dozens of other companies showed their wares, and even though they took a back seat to the sound of music, the Festival proved that rock music and technology can indeed co-exist. ■

"TIME IS MONEY"

INTROL-C for the 6809

INTROL-C/6809 saves time in two important ways:

1. Less development time than with assembly language
2. Faster program execution times (and smaller code size) than other high-level languages

INTROL-C/6809 includes:

- FULL C Compiler
- 6809 Assembler
- Linking Loader
- Library Manager
- Standard Library

INTROL-C PRODUCES 6809 object code that is efficient, re-entrant, position-independent, and ROMable.

Host systems supported: OS-9* \$375, FLEX-09** \$375, UNIFLEX** \$425, CP/M*** \$425. One year maintenance, \$100.

Trademarks:

*Microwave, Inc.

Apple DOS Revealed

This article reveals little-known capabilities of the Apple DOS (both 3.3 and 3.2) and helps you achieve assembly language efficiency while working with disk files.

By Donald J. Black

One large but little-known section of Apple DOS provides general-purpose file handling capabilities for assembly-language programs. This well-kept secret is exactly what the assembly-language programmer needs to write disk and file handling programs properly.

When using DOS from a Basic program, users request DOS services with print statements. Each print line that begins with a control-D is interpreted by DOS as a request for service. But what can you do if you want to request those services from an assembly-language program?

Assembly-language programs can simulate print statements—all they have to do is output a sequence of characters through the output hook (address in locations \$36 and \$37, or call \$FDED). Files can be opened, read and written, and so on.

Characters can be transferred to and from files by calling input and output hooks. Programs can also use BLOAD and BSAVE commands to

copy areas of memory to and from files. However, there are some limitations when you use print statements to call DOS. For example, you can only issue new requests when it appears to DOS that you are at the beginning of a line.

If your program is a general-purpose text manipulation program, you may not be able to guarantee being at the beginning of a line when you want to issue a new command. For example, in a text editor, you might want to switch from input to output in the middle of a line, or the text might not even have "lines." It would be nice to have another way to request DOS services.

Some programs use the RWTS routines for file manipulations. RWTS provides a way to read or write specific sectors on a disk. But this approach has some drawbacks. First, the program has to have a fairly complete knowledge of the structure of disk files. The present structure is well documented in the Apple DOS

manual, but Apple might someday change or extend the format. Also, the program using RWTS to manipulate files must duplicate code that is already in DOS, which takes extra memory. Why use your time debugging code that is already available?

A Better Way

DOS provides a set of general-purpose file handling operations, which are designed for assembly-language programs. A standard entry point is set up by DOS in low memory (at location \$3D6); calling the entry point requests a DOS operation.

There is a standard parameter area for these DOS calls. Location \$3DC is the entry point of a subroutine that returns the address of the parameter area. This subroutine puts the address in the Y and A registers (Y = low byte, A = high byte). The parameter area indicates which operation is requested. It also must contain the specific parameters for that operation. The format depends on the specific operation requested.

To perform a specific operation, a program can:

1. Call \$3DC to get the address of the parameter area (JSR \$3DC)
2. Save that address
3. Set up the parameter area
4. Call \$3D6 (JSR \$3D6)

The results depend on the specific operation and parameters. In general, when DOS returns to your pro-

Code (hex)	Name	Meaning
0	No Operation	This is accepted by DOS but doesn't do anything
1	Open	Open a file
2	Close	Close a file
3	Read	Several functions for reading a file
4	Write	Several functions for writing a file
5	Delete	Delete a file
6	Catalog	Execute a Catalog command
7	Lock	Lock a file
8	Unlock	Unlock a file
9	Rename	Rename a file
\$A	Position	Indicate position in file for next Read or Write
\$B	Init	Initialize a disk
\$C	Verify	Verify the integrity of a file

Table 1. Valid operations in Apple DOS.

Address correspondence to Donald J. Black, Micro Solutions, Inc., 411 Barber Ave., Ann Arbor, MI 48103.

gram, the carry flag is an error indicator—carry clear means the requested operation was completed successfully, and carry set means an error was detected. If an error is indicated, DOS has stored an error code in the parameter area.

The first byte of the parameter area always contains the operation you want to perform. This must be a number between 0 and \$C. Any other number is an illegal request and will be rejected by DOS. DOS will go no further, but will store error code 3 in the parameter area, set the carry flag and return.

Valid operations are shown in Table 1. The Read and Write operations actually have several choices. The second byte of the parameter area indicates which sub-operation is requested.

Read operations are given in Table 2. Write operations, shown in Table 3, are similar. For Read and Write operations, the file must have been opened with an open operation.

Most operations perform some action with a file. For each file you are manipulating, you must reserve an area of memory. DOS uses this area to remember various items of information about the file. For example, DOS keeps the current position in the file in this area; the DOS manual calls this area a file buffer.

When you enter a Maxfiles command, you tell DOS how many file buffers to reserve for its own use. DOS uses those file buffers when handling commands or print statements. You are not restricted to using those file buffers in your assembly-language program. For each operation, you specify the address of the file buffer to use. This is part of the parameter area.

A file buffer actually consists of a number of sections. Section 1, the File Data Block (FDB), contains general information about the file such as record length, current position, and so on. Section 2 contains the current Track and Sector List (TSL) sector. Section 3 contains the current data sector for the file.

Section 1 must be 45 bytes long (hex \$2D). Sections 2 and 3 must each

be 256 bytes long (hex \$100). These do not have to be in the same area of memory. You will also need a 30-byte area for file names. You may also need a buffer area for reading and writing records.

Parameter Area Format

The format of the parameter area for each specific operation is de-

scribed in Tables 4 through 16. Many of the parameters are two-byte values (record length, buffer address, etc.). In all such cases, the lower byte of the value comes first, in the lower byte of the parameter. In the following descriptions the first byte of the parameter area is called byte number zero (0). Byte number one (1) is the second byte, and so on.

Code	Name	Meaning
0	No-Op	Accepted but doesn't do anything
1	Read Character	Returns the next character from the file
2	Read Record	Returns a group of characters from the file (count and memory address specified in the parameter area)
3	Set Position, Read Character	Indicates position in the file, then returns the next character from the file at that position
4	Set Position, Read Record	Indicates position in the file, then returns a group of characters from the file (count and memory address specified in the parameter area)

Table 2. Read operations in Apple DOS.

Code	Name	Meaning
0	No-Op	Accepted but doesn't do anything
1	Write Character	Writes the next character to the file
2	Write Record	Writes a group of characters to the file (count and memory address specified in the parameter area)
3	Set Position, Write Character	Indicates position in the file, then writes the next character to the file at that position
4	Set Position, Write Record	Indicates position in the file, then writes a group of characters to the file at that position (count and memory address specified in the parameter area)

Table 3. Write operations in Apple DOS.

Operation 1—OPEN FILE

Byte #	Purpose
0	Code for Open File = 1
1	Not used
2 & 3	Record length. 0 means use default, currently = 1
4	Volume number of volume containing file to open; 0 means any volume number is accepted; non-zero means volume number from disk must match this number; DOS returns the actual volume number in this byte
5	Drive number of file; this must be specified
6	Slot number in which the disk drive's controller is located; this must be specified
7	File type byte; if file is created, this will be the file type (see DOS manual description of directory entries for description of this byte); DOS returns the file type of the file in this byte
8 & 9	Address of 30-byte buffer containing file name; all 30 bytes must match; file names are normally padded to 30 characters by appending spaces
\$A	DOS returns the error code in this byte if error
\$B	Not used
\$C & \$D	Address of FDB
\$E & \$F	Address of current TSL buffer
\$10 & \$11	Address of current data sector buffer

Table 5. Operation 1—Open file.

Operation 0—NO-OP

Byte #	Purpose
0	Code for No-Op

Table 4. Operation 0—No-op.

Bytes \$C through \$11 in Operation 1—Open File (Table 5) describe the file buffer to use for this file. The same addresses must be used for any other operations performed on the same file. DOS uses these areas. Your program should not change their contents.

For the Open operation, starting with DOS 3.2, you have a choice of what to do if you try to open a nonexistent file. This choice is specified by the X register when the request is issued.

If the X register is 0 and the file does not exist, DOS will create the file and then open it. If the X register is not 0 and the file does not exist, DOS will not create the file. Instead it will return error code 6 (file not found).

The Open operation searches the directory for the file. If the file is found or created, the "current" position is set to the beginning of the file. The first TSL sector is read into section 2 of the file buffer. If the file is successfully opened, you may continue with other operations on the file.

The Close operation (Table 6) writes out the current data sector if it has never been written (new data) or has been changed. Close also writes out the current TSL if it needs to be written. Any unwritten sectors that were allocated for the file but not used are made available for other files. After a Close you may use the file buffer for other files or for other purposes.

For all Read functions, outlined in Table 7, each character is read from the "current" position in the file. Then the current position is updated to the next character. Functions 3 and 4 set a new position in the file, then begin reading at the new position. The position is specified as a record number.

The record number is multiplied by the record length you specified when you opened the file. Then the byte number in the record (bytes 4 and 5 in the parameter area) is added to the result. This gives the byte position in the file for the next character to read. The first record of the file is record 0. The first byte of each record is byte number 0.

For functions 2 or 4, an initial count of 0 characters (bytes 6 and 7) reads no characters. After each character is read, the address is incremented and the count is decremented.

A portion of the record may have

been read when an error occurs. You can always determine how many characters were read by subtracting the starting address from the ending address (DOS changes bytes 8 and 9, so they will contain the ending address). You should make sure your program remembers the starting address.

DOS takes care of reading the appropriate sectors for the file. It follows the Track and Sector List. It also

keeps track of which sectors are in the file buffer. Your program need only keep track of the relative position of data in the file. DOS determines which sectors on the disk are needed.

DOS only reads a sector from disk when the required sector is not in the file buffer, which happens when the position in the file moves from one sector to another. This automatic buffering technique may save many

Byte #	Purpose
0	Code for Close File=2
1-3	Not used
4	Returns actual volume number
5-9	Not used
\$A	DOS returns the error code in this byte if error
\$B	Not used
\$C & \$D	Address of FDB
\$E & \$F	Address of current TSL buffer
\$10 & \$11	Address of current data sector buffer

Table 6. Operation 2—Close file.

Byte #	Purpose
0	Code for Read=3
1	Code for Read sub-function: 0=No-Op, 1=Read Character, 2=Read Record, 3=Set Position, Read Character, 4=Set Position, Read Record
2 & 3	Record number for functions 3 or 4
4 & 5	Byte number in record for functions 3 or 4; bytes 2-5 indicate the new position for functions 3 or 4
6 & 7	Number of characters to read for functions 2 or 4; this does not have to be the same as the record length
8 & 9	Address of buffer to accept characters for functions 2 or 4; for functions 1 or 3, DOS returns the character read in byte 8, and byte 9 is not used
\$A	DOS returns the error code in this byte if error
\$B	Not used
\$C & \$D	Address of FDB
\$E & \$F	Address of current TSL buffer
\$10 & \$11	Address of current data sector buffer

Table 7. Operation 3—Read.

Byte #	Purpose
0	Code for Write=4
1	Code for Write sub-function: 0=No-Op, 1=Write Character, 2=Write Record, 3=Set Position, Write Character, 4=Set Position, Write Record
2 & 3	Record number for functions 3 or 4
4 & 5	Byte number in record for functions 3 or 4
6 & 7	Number of characters to write - 1 for functions 2 or 4; this does not have to be the same as the record length
8 & 9	Address of buffer containing characters to write for functions 2 or 4; for functions 1 or 3, byte 8 contains character to write, and byte 9 is not used
\$A	DOS returns the error code in this byte if error
\$B	Not used
\$C & \$D	Address of FDB
\$E & \$F	Address of current TSL buffer
\$10 & \$11	Address of current data sector buffer

Online Update Service

The Softronics Online Update Service is provided as an additional support service at no additional cost to Softerm users. Its purpose is to allow fast turnaround of Softerm program fixes for user-reported problems using the *automatic patch facility* included in Softerm as well as a convenient distribution method for additional terminal emulations and I/O drivers which become available. *User correspondence* can be electronically mailed to Softronics, and *user-contributed* keyboard macros, file transfer macros, and host adaptations of the Softrans FORTRAN 77 program are available on-line.

Most advanced communications software available

Just check Softerm's 300 page user manual. You simply can't buy a more sophisticated package or one that's easier to use. Available now for only \$150 from your local dealer or Softronics, Inc.

SOFTRONICS®

Your host computer won't know the difference!

Softerm provides an *exact* terminal emulation for a wide range of CRT terminals which interface to a variety of host computer systems. Special function keys, sophisticated editing features, even local printer capabilities of the terminals emulated by Softerm are fully supported. Softerm operates with even the most discriminating host computer applications including video editors. And at speeds up to 9600 baud using either a direct connection or any standard communications modem.

Unmatched file transfer capability

Softerm offers file transfer methods flexible enough to match any host computer requirement. These include *character protocol* with user-definable terminator and acknowledge strings, block size, and character echo wait, and the intelligent *Softrans™* protocol which provides reliable error-free transmission and reception of data. The character protocol provides maximum flexibility for text file transfers. *Any* type file may be transferred using the Softrans protocol which provides automatic binary encoding and decoding, block checking with error recovery, and data compression to enhance line utilization. A FORTRAN 77 source program is supplied with Softerm which is easily adaptable to any host

computer to allow communications
with Softerm using the Softrans protocol.

Softerm file transfer utilizes an easy to use *command language* which allows simple definition of even complex multiple-file transfers with handshaking. Twenty-three high-level commands include *DIAL, CATALOG, SEND, RECEIVE, ONERR, HANGUP, MONITOR* and others which may be executed in immediate command mode interactively or from a file transfer macro command file which has been previously entered and saved on disk.

Built-in utilities

Softerm disk utilities allow DOS commands such as CATALOG, INIT, RENAME, and DELETE to be executed allowing convenient file maintenance. Local file transfers allow files to be displayed, printed, or even copied to another file without exiting the Softerm program. Numerous editing options such as tab expansion and space compression are provided to allow easy reformatting of data to accommodate the variations in data formats used by host computers. Softerm supports automatic dialing in both terminal and file transfer modes. Dial utilities allow a *phone book* of frequently used numbers to be defined which are accessed by a user-assignable name and

Not all business And we've got the

As you know, one picture is worth a few thousand numbers.

As you may not know, Apple® Business Graphics software can generate more types of pictures, in more colors, using more data than any other graphics package.

So you not only get the usual bar graphs and pie charts. You also get unusual bar graphs and pie charts. Sophisticated line and area graphs. Even scattergrams. All teamed with extremely useful and powerful features—exploded views, unlimited overlays, floating titles and more.

	Apple	VisiTrend/ VisiPlot	pfsGraph

disk accesses.

For all Write functions, shown in Table 8, each character is written at the "current" position in the file, then the current position is updated to the next character. Functions 3 and 4 set a new position in the file, then begin writing at the new position.

The position is specified as a record number.

The record number is multiplied by the record length you specified when you opened the file. Then the byte number in the record (bytes 4 and 5 in the parameter area) is added to the result. This gives the byte posi-

tion in the file for the next byte to write. The first record of the file is record 0. The first byte of each record is byte number 0.

For functions 2 or 4, an initial count of 0 characters (bytes 6 and 7) writes one character. After each character is written, the address is incremented and the count is decremented.

Note the anomaly: for Write functions 2 and 4, the count you specify is one less than the actual number of characters you write. This is different than the Read functions, which expect an exact character count.

A portion of the record may have been written when an error occurs. You can always determine how many characters were written by subtracting the starting address from the ending address (bytes 8 and 9).

As characters are written, they are stored in the current data sector buffer. The buffer will be written out to disk when the position in the file moves to a different sector. This will happen when the buffer is full or when you set a new position. This buffering technique may save many disk accesses.

However, you must remember to do a Close when you have finished writing a file. The Close will make sure all buffers are written out to disk. DOS takes care of writing the appropriate sectors for the file, and allocates additional sectors when necessary. It also keeps track of which sectors are in the file buffer. Your program need only manage the relative position of data in the file. DOS determines which sectors on the disk to use.

The Delete File operation shown in Table 9 first opens the file to be deleted. Because it does a complete Open File, you must specify valid addresses for the FDB, TSL buffer and current data sector buffer. After the file is open, the DOS marks the directory entry as deleted. Then it marks all of the disk space allocated to the file as available for new files.

Note that if you want to discard a file that you have just been creating (you have opened the file and written some data), you should close the file before you delete it. If you don't close the file first, the disk space allocated to the file will be lost. DOS won't have the list of sectors used by the file, so those sectors will not be made available for new files.

The Catalog operation (Table 10) works just like the Catalog command.

Byte #	Purpose
0	Code for Delete File=5
1-3	Not used
4	Volume number of volume containing file to delete; 0 means current volume; non-zero means volume number from disk must match this number
5	Drive number on which file is located; this must be specified
6	Slot number in which the disk drive's controller is located; this must be specified
7	Not used
8 & 9	Address of 30 byte buffer containing the name of the file to delete; all 30 bytes must match
\$A	DOS returns the error code in this byte if error
\$B	Not used
\$C & \$D	Address of FDB
\$E & \$F	Address of current TSL buffer
\$10 & \$11	Address of current data sector buffer

Table 9. Operation 5—Delete file.

Byte #	Purpose
0	Code for Catalog=6
1-3	Not used
4	Volume number
5	Drive number for which catalog is desired; this must be specified
6	Slot number in which the disk drive's controller is located; this must be specified
7-9	Not used
\$A	DOS returns the error code in this byte if error
\$B	Not used
\$C & \$D	Address of FDB
\$E & \$F	Address of current TSL buffer

AARDVARK — THE ADVENTURE PLACE

ADVENTURES FOR OSI, TRS-80, TRS-80 COLOR, SINCLAIR, PET, VIC-20

ADVENTURES — Adventures are a unique form of computer game. They let you spend 30 to 70 hours exploring and conquering a world you have never seen before. There is little or no luck in Adventuring. The rewards are for creative thinking, courage, and wise gambling — not fast reflexes.

In Adventuring, the computer speaks and listens to plain English. No prior knowledge of computers, special controls, or games is required so everyone enjoys them—even people who do not like computers.

Except for Quest, itself unique among Adventure games, Adventures are non-graphic. Adventures are more like a novel than a comic book or arcade game. It is like reading a particular exciting book where you are the main character.

All of the Adventures in this ad are in Basic. They are full featured, fully plotted adventures that will take a minimum of thirty hours (in several sittings) to play.

Adventuring requires 16k on Sinclair, TRS-80, and TRS-80 Color. They require 8k on OSI and 13k on VIC-20. Sinclair requires extended BASIC.

TREK ADVENTURE by Bob Retelle — This one takes place aboard a familiar starship and is a must for trekkies. The problem is a familiar one — The ship is in a "decaying orbit" (the Captain never could learn to park!) and the engines are out (You would think that in all those years, they would have learned to build some that didn't die once a week). Your options are to start the engine, save the ship, get off the ship, or die. Good Luck.

Authors note to players — I wrote this one with a concordance in hand. It is very accurate — and a lot of fun. It was nice to wander around the ship instead of watching it on T.V.

CIRCLE WORLD by Bob Anderson — The Alien culture has built a huge world in the shape of a ring circling their sun. They left behind some strange creatures and a lot of advanced technology. Unfortunately, the world is headed for destruction and it is your job to save it before it plunges into the sun!

Editors note to players — In keeping with the large scale of Circle World, the author wrote a very large adventure. It has a lot of rooms and a lot of objects in them. It is a very convoluted, very complex adventure. One of our largest. Not available on OSI.

HAUNTED HOUSE by Bob Anderson — This one is for the kids. The house has ghosts, goblins, vampires and treasures — and problems designed for the 8 to 13 year old. This is a real adventure and does require some thinking and problem solving — but only for kids.

Authors note to players — This one was fun to write. The vocabulary and characters were designed for younger players and lots of things happen when they give the computer commands. This one teaches logical thought, mapping skills, and creativity while keeping their interest.

DERELICT by Rodger Olsen and Bob Anderson — For Wealth and Glory, you have to ransack a thousand year old space ship. You'll have to learn to speak their language and operate the machinery they left behind. The hardest problem of all is to live through it.

Authors note to players — This adventure is the new winner in the "Toughest Adventure at Aardvark Sweepstakes". Our most difficult problem in writing the adventure was to keep it logical and realistic. There are no irrational traps and sudden senseless deaths in Derelict. This ship was designed to be perfectly safe for its' builders. It just happens to be deadly to alien invaders like you.

NUCLEAR SUB by Bob Retelle — You start at the bottom of the ocean in a wrecked Nuclear Sub. There is literally no way to go but up. Save the ship, raise her, or get out of her before she blows or start WWII.

Editors note to players — This was actually plotted by Rodger Olsen, Bob Retelle, and someone you don't know — Three of the nastiest minds in adventure writing. It is devious, wicked, and kills you often. The TRS-80 Color version has nice sound and special effects.

EARTHQUAKE by Bob Anderson and Rodger Olsen — A second kids adventure. You are trapped in a shopping center during an earthquake. There is a way out, but you need help. To save yourself, you have to be a hero and save others first.

Authors note to players — This one feels good. Not only is it designed for the younger set (see note on Haunted House), but it also plays nicely. Instead of killing, you have to save lives to win this one. The player must help others first if he/she is to survive — I like that.

PYRAMID by Rodger Olsen — This is one of our toughest Adventures. Average time through the Pyramid is 50 to 70 hours. The old boys who built this Pyramid did not mean for it to be ransacked by people like you.

Authors note to players — This is a very entertaining and very tough adventure. I left clues everywhere but came up with some ingenious problems. This one has captivated people so much that I get calls daily from as far away as New Zealand and France from bleary eyed people who are stuck in the Pyramid and desperate for more clues.

QUEST by Bob Retelle and Rodger Olsen — THIS IS DIFFERENT FROM ALL THE OTHER GAMES OF ADVENTURE!!!! It is played on a computer generated map of Alesia. You lead a small band of adventurers on a mission to conquer the Citadel of Moorlock. You have to build an army and then arm and feed them by combat, bargaining, exploration of ruins and temples, and outright banditry. The game takes 2 to 5 hours to play and is different each time. The TRS-80 Color version has nice visual effects and sound. Not available on OSI. This is the most popular game we have ever published.

MARS by Rodger Olsen — Your ship crashed on the Red Planet and you have to get home. You will have to explore a Martian city, repair your ship and deal with possibly hostile aliens to get home again.

Authors note to players — This is highly recommended as a first adventure. It is in no way simple—playing time normally runs from 30 to 50 hours — but it is constructed in a more "open" manner to let you try out adventuring and get used to the game before you hit the really tough problems.

ADVENTURE WRITING/DEATHSHIP by Rodger Olsen — This is a data sheet showing how we do it. It is about 14 pages of detailed instructions how to write your own adventures. It contains the entire text of Deathship. Data sheet - \$3.95. NOTE: Owners of OSI, TRS-80, TRS-80 Color, and Vic 20 computers can also get Deathship on tape for an additional \$5.00.

PRICE AND AVAILABILITY:

All adventures are \$14.95 on tape except Earthquake and Haunted House which are \$9.95. Disk versions are available on OSI and TRS-80 Color for \$2.00 additional.

Please specify system on all orders

ALSO FROM AARDVARK — This is only a partial list of what we carry. We have a lot of other games (particularly for the TRS-80 Color and OSI), business programs, blank tapes and disks and hardware. Send \$1.00 for our complete catalog.

VIC-20

The Lock File operation (Table 11) first opens the file to be locked. Because it does a complete Open File, you must specify valid addresses for the FDB, TSL buffer and current data sector buffer. After the file is open, the file is marked as locked. The file type byte as it was before the file was locked is returned in byte 7 of the pa-

rameter area.

The Unlock File operation (Table 12) first opens the file to be unlocked. Because it does a complete open file, you must specify valid addresses for the FDB, TSL buffer and current data sector buffer. After the file is open, the file is marked as unlocked. The file type byte as it was before the file

was unlocked is returned in byte 7 of the parameter area.

The Rename File operation (shown in Table 13) first opens the file, using the old file name (the address of the old file name is specified in bytes 8 and 9 of the parameter area). Because a complete Open File is done, you must specify valid addresses for the FDB, TSL buffer and current data sector buffer. After the file is open, the new name is written into the directory entry. There is no check that the new name already exists. You can end up with more than one file having the same name if the new name is the same as one that already exists.

The Position File operation in Table 14 sets the new position in the file for the next read or write request. The record number is multiplied by the record length you specified when you opened the file. Then the byte number in the record is added to the result. This gives the byte position in the file for the next character to read or write. The first record of the file is record 0. The first byte of each record is byte number 0. The file must be open before you can do a Position File operation.

The Initialize Disk operation (Table 15) first calls RWTS to format the disk (function=4). It then writes a Volume Table of Contents (VTOC) and an empty directory on track \$11 of the disk. Finally, it writes a copy of DOS on tracks 0, 1 and 2.

The name of the greeting program on the new disk will be the name of the last program run. You can change this name if you wish. DOS has a parameter buffer for file names for commands. The file name in this buffer when you initialize the disk is the name of the greeting program. You can store the desired name of your greeting program in this buffer.

You can find the address of this file name buffer in a table in the beginning of DOS. Location \$3D2 (part of the JMP instruction at \$3D0) and location \$37 (output hook when DOS is connected) both contain the first page number of DOS.

For a 48K system, this will be page \$9D, meaning DOS begins at location \$9D00. This is not the same as HIMEM. HIMEM reserves space for file buffers. For a 48K system and MAXFILES=3, HIMEM is set to \$9600.

Once you have found the beginning of DOS, you can find the address of the file name buffer. Locations 6 and 7 in the table at the beginning of DOS contain the ad-

Byte #	Purpose
0	Code for Unlock File=8
1-3	Not used
4	Volume number of volume containing the file to unlock; 0 means use the current volume; non-zero means the volume number of the disk must match this number
5	Drive number on which the file is located; this must be specified
6	Slot number in which the disk drive's controller is located; this must be specified
7	DOS returns the file type as it was before the file was unlocked
8 & 9	Address of 30-byte buffer containing the name of the file to be unlocked; all 30 bytes must match
\$A	DOS returns the error code in this byte if error
\$B	Not used
\$C & \$D	Address of FDB
\$E & \$F	Address of current TSL buffer
\$10 & \$11	Address of current data sector buffer

Table 12. Operation 8—Unlock file.

Byte #	Purpose
0	Code for Rename File=9
1	Not used
2 & 3	Address of 30-byte buffer containing new file name
4	Volume number of volume containing the file to be renamed; 0 means use the current volume; non-zero means the volume number of the disk must match this number
5	Drive number on which the file is located; this must be specified
6	Slot number in which the disk drive's controller is located; this must be specified
7	DOS returns the file type byte in this byte
8 & 9	Address of 30-byte buffer containing the old file name; all 30 bytes must match
\$A	DOS returns the error code in this byte if error
\$B	Not used
\$C & \$D	Address of FDB
\$E & \$F	Address of current TSL buffer
\$10 & \$11	Address of current data sector buffer

Table 13. Operation 9—Rename file.

Byte #	Purpose
0	Code for Position File=\$A
1	Not used
2 & 3	Record number
4 & 5	Byte number in record
6-9	Not used
\$A	DOS returns the error code in this byte if error
\$B	Not used
\$C & \$D	Address of FDB
\$E & \$F	Address of current TSL buffer
\$10 & \$11	Address of current data sector buffer

Table 14. Operation \$A—Position file.

dress of the file name buffer. For a 48K system, the locations are \$9D06 and \$9D07. For DOS 3.2 and 3.3 the buffer is at \$AA75.

Note that you need to store the page number of the beginning of DOS in byte 1 of the parameter area. This is the same page number you found in location \$3D2 as described above.

The Verify File operation (Table 16) first opens the file to be verified. Because it does a complete Open File, you must specify valid addresses for the FDB, TSL buffer and current data sector buffer. The operation then reads the file until the end of the file is reached or an error occurs.

By now you will have noticed the pattern. Most operations open a file and perform some action on the file. For those operations, bytes 4, 5 and 6 are the Volume, Drive and Slot numbers. Bytes 8 and 9 are the address of the file name. Bytes \$C through \$11 describe the file buffer. DOS returns the actual volume number in byte 4 and the file type byte in byte 7.

Remember that when you open a file, you declare addresses that describe the file buffer. You must al-

ways use the same addresses for other operations for the same file.

Since DOS has no provision for default values for drive and slot numbers, you must specify them when needed. Do not specify 0. However, a reasonable default for your program would be to use the drive and slot from which the program was loaded. You can find these values in the DOS I/O Block, which is a parameter area for RWTS. Its format is described in the DOS Manual (chapter 9).

DOS has its own I/O Block, which it uses for commands like Run or BLoad. You can call the subroutine at location \$3E3 to get the address of the

DOS I/O Block (returned in the Y and A registers). Then you can look in the I/O Block for the drive and slot numbers.

Programmer's Tool

These operations provide the assembly-language programmer with all the tools required for general-purpose file handling programs. For example, to read a sequential file, you can use the following operations:

1. open the file
2. use successive Read Character calls until an End of Data error is reported
3. close the file

Byte #	Purpose
0	Code for Initialize Disk = \$B
1	Memory page number of beginning of DOS code
2 & 3	Not used
4	New volume number for disk
5	Drive number of disk to be initialized; this must be specified
6	Slot number in which the disk drive's controller is located; this must be specified
7-9	Not used
\$A	DOS returns the error code in this byte if error
\$B-\$11	Not used

Comp Case

IS THE PERFECT GIFT FOR THE COMPUTER THAT HAS EVERYTHING

Your investment in a computer is long term. You expect many years of reliable service. Comp Case protects your investment when not in use or while transporting it from office or home. Your computer never leaves the case — you simply remove the lid, make the electrical connection, and operate. Comp Cases are available for most brands of computers and peripherals.

Comp Case is the perfect Christmas gift. Comp Cases are available in better computer stores in our area. Or call 800-848-7548 direct to receive your Comp Case in time for Christmas.

Table 17. DOS error codes

Writing a sequential file is similar. Substitute Write Character for Read Character operations.

For random I/O, specify a record length when you open the file. Then you may declare at any time where to begin reading or writing next. The new position can be declared as a separate operation or as part of the desired Read or Write operation.

Using these operations lets DOS take care of allocating space, follow-

ing the TSL list and managing the disk directory structure. You take advantage of the DOS buffering to cut down on the number of disk accesses. You don't have to duplicate DOS code in your program. In addition, you shouldn't have to change your program if DOS changes.

By designing these operations with a standard calling sequence, Apple has implicitly promised not to change their meanings. Thus, it doesn't mat-

ter if you are using DOS 3.2 or 3.3.

The operations perform general functions. If the way DOS implements the functions changes, the operations can still do the same thing. For example, when DOS 3.3 came out, disks changed from 13 to 16 sectors. Programs that used RWTS to read and write files probably had to be changed to allow for 16 instead of 13 sectors. But programs using the general-purpose functions let DOS take care of all of the changes. They wouldn't have to change at all.

These operations can be quite an aid for the assembly-language programmer. They can make life a lot easier, which is what tools like DOS are all about. ■

Your Own University Library Online At Home!

If you're free between the hours of six and midnight, make a date with one of the world's fastest, most powerful online information services — at a fraction of what it would cost during the business day. All you pay is a \$50 registration fee to receive your classified user's password. Then, any evening, you can summon up a wealth of information for as little as \$6 per hour.

Technical and scientific abstracts. Medical journals. Government studies. Business indexes. Major newspapers. BRS/AFTER DARK gives you access to the same comprehensive data files used by BRS Search Service subscribers, which include major corporations and reference libraries throughout the world. All instantly accessible with simple, interactive language.

Of course, BRS/AFTER DARK also gives you valuable peripheral services like a home-computer Newsletter and nationwide communication via electronic mail. Plus, shop-at-home services and instant software delivery programmed for the very near future.

Don't let another evening go by without BRS/AFTER DARK. All you need is your phone and any dial-up system or terminal. For more information about BRS/AFTER DARK, just fill out the coupon.

PLATO WIDENS YOUR CHILD'S WORLD.

In public school systems across the United States, PLATO® educational software has proved that it stimulates and speeds learning. Now, for the first time, Control Data has put PLATO lessons on micro-computer disks, so your child can learn at home—and enjoy it.

For information on PLATO educational software, or to order, call toll free 800/233-3784. In California, call 800/233-3785, or write Control Data Publishing Co., P.O. Box 261127, San Diego, CA 92126.

Circle 47 on Reader Service card.

NOW, QUALITY EDUCATIONAL SOFTWARE IS AVAILABLE FOR YOUR HOME COMPUTER.

- PLATO® software now available on disks in Math, Physics, Foreign Languages, Computer Literacy—and more is on the way.
- For use on your Apple II Plus, TI 99/4A or Atari 800.
- Introductory Offering: Single lesson, \$45.00; additional lessons, \$35.00 each. 10-day money-back trial.

CHOOSE THE LESSONS THAT FIT YOUR CHILD'S NEEDS.

• Basic Number

Facts: lets your child practice basic numbers, including addition without carrying, subtraction without borrowing and multiplication/division with single digits. Kids race against time to build up their speed in these math areas. Designed for elementary school age, or any child who needs practice with basic whole number operations.

• **Whole Numbers:** simulates a pinball game to hold and build interest in whole number operations. Problems include addition, subtraction, multiplication, division and mixed numbers. Designed for elementary and junior high age groups.

• **Decimals:** kids are challenged to break balloons by entering the correct decimal corresponding to the position of the balloon on a vertical line. Numbers are entered on a trial-and-error basis. Software automatically adjusts difficulty to the child's performance. For elementary math students.

• **Fractions:** same format as Decimals, but requires the use of fractions to break the balloons. Numbers are entered on a trial-and-error basis. Balloons may burst in any order until none are left. Difficulty adjusts to your child's performance. For elementary math students.

• **Computer Literacy—Introduction:** this lesson is presented in a friendly, non-intimidating manner with touches of humor and simple, supportive graphics. It presents the history and uses of computers in today's society. Designed for junior or senior high and vocational school students.

• **French Vocabulary Builder.**

• **Spanish Vocabulary Builder.**

• **German Vocabulary Builder:** students are presented with a basic vocabulary of 500 words, including useful verbs, number words or common words for traveling or in the home. Groups of related words give learners context and similarity clues, which help increase foreign language skills. Lessons supplement introductory and/or refresher coursework.

• **Physics—Elementary Mechanics:** provides a problem-solving test in the elementary mechanics of physics. Students are shown a physical problem; then must "purchase" the missing information needed to answer it correctly. The emphasis is on *understanding* the problem, rather than just supplying the correct answers. Designed for senior high age level.

COMPUTER-BASED EDUCATION

A Smart Way To Communicate

If you're looking for more than what a simple acoustic coupler will do, then the Bizcomp Intelligent Modem is the intelligent answer.

By John Francis

One fascinating use for a personal computer is as a tool for communicating with other systems and with the people who use them. Few computer demonstrations are as impressive as one system calling another (perhaps at a scheduled time to get the lowest rate), transferring an error free data file and then hanging up to go about other business. The data transferred might be a personal message to the owner of the remote system, the latest version of a favorite software program or even a magazine article for editorial review.

Until recently, setting up a system to do all that would have been quite a job, requiring a great deal of specialized knowledge. Communications products which "simply plug into a telephone jack" have been available for some time, but adapting these products and their software to your particular system has not always been easy. For the average personal computer user who wants more than what a simple acoustic coupler will do, the product landscape has been pretty barren.

Smart Answer

The answer to this need is an intelligent (i.e., microprocessor-controlled) modem. The specialized tasks of controlling and communicating over a telephone line can be performed economically by a microprocessor programmed for that purpose.

One of the first products of this type to appear on the microcomputer scene was the Bizcomp Intelligent Modem (Business Computer Corp., PO Box 7498, Menlo Park, CA 94025). Fascinated by the potential of a microprocessor/modem combination, I ordered a copy of the user's manual for one of

the Bizcomp models; after reading it I ordered a Model 1022 for my home system.

The Bizcomp performs modulation, demodulation, automatic (pulse or tone) dialing, recognition of dial tone and busy signals, automatic answering and more—all over two standard connections: one to the phone line (approved under the rules of the Federal Communications Commission) and the other to your computer. Programming is simple and can be done in any language that provides input and output access to a serial port.

Intelligent vs Dumb

The Bizcomp modems differ from most other direct-connect units—the

telephone control logic has been moved into the modem package. With this design, writing a program to do sophisticated communications becomes much simpler, and need not involve assembly language or fancy timing techniques that might produce wrong numbers if the coding isn't exactly right for your machine.

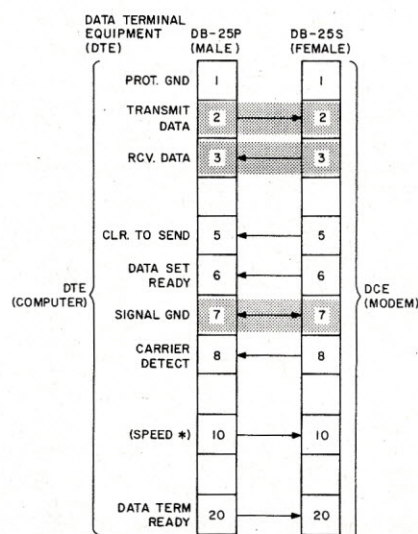

The Serial Connection

Most personal computers have, or can easily be equipped with, an RS-232 serial port. This interface lets you add accessories such as printers and modems to your system. Serial transmission is compatible with the telephone system, and is thus the accepted method of sending data signals over long distances.

The Bizcomp design requires minimum signals from the computer (transmit data, received data and signal ground), while supplying safe default values for signals that your system may or may not require.

Fig. 1 shows the signal lines of the RS-232 interface, and highlights the three (the bare minimum) required for successful use of the Bizcomp. The EIA RS-232 signal definitions and their use with the Bizcomp follow:

Pin 1, Protective Ground—This is not a logic signal; it is reserved for a wire that serves the same purpose as the U-shaped third prong on a power cord (electrical safety). Since this line is optional and the Bizcomp is a low-voltage, fully insulated unit, this pin in the connector is unused.

* THE EIA STANDARD RESERVES THIS PIN FOR USE BY THE MODEM MANUFACTURER. THE BIZCOMP INTELLIGENT MODEM USES IT FOR ENABLING "AUTOBAUD" OPERATION.

Fig. 1. Signal lines of the RS-232 interface. The highlighted lines are the only three required by the Bizcomp 1022.

Address correspondence to John Francis, PO Box 23154, San Jose, CA 95153.

Pin 2, Transmit Data—Your serial port provides the output data signal to the modem on this pin. The output data stream is used for messages to the remote computer and the intelligent modem (at different times; see code multiplexing, below).

Pin 3, Received Data—The modem provides its demodulated received signal to the serial port on this pin. Using code multiplexing, status messages from the microprocessor in the Bizcomp are also fed into your system over this line.

Pin 5, Clear to Send—The modem uses this line to indicate to the computer that it can send data on pin 2. Your serial port may or may not require this input from the modem; the Bizcomp provides a steady true signal (+8 V) on this line whenever it is turned on, just in case the computer requires it.

Pin 6, Data Set Ready—This line is also kept at a true level whenever the modem is on, and indicates to the computer that the modem is operating. Your serial port may or may not require this signal.

Pin 7, Signal Ground—This line provides a voltage reference for the other logic signals, so that voltages on the associated lines at both ends of the cable closely agree. It is not a logic signal, but serves to help define the logic signals on other lines.

Pin 8, Carrier Detect—The usual meaning of this signal is that the remote modem's carrier (the telephone-compatible signal which is modulated by data) has been detected (recognized) by the local modem. Its use is somewhat different with the Bizcomp; its code-multiplexed status messages might be ignored by the computer if the original definition were followed precisely. The Bizcomp holds this line true whenever it is turned on, so that both modem status and received data messages will be treated as valid by systems which use this signal.

Pin 10, Speed—The signal on this line is not defined in the RS-232 standard other than to say that it is reserved for special use by the modem manufacturer. It is used as an input to the Bizcomp when automatic speed selection is desired. Normally (and when this line is left unconnected) the Bizcomp expects code-multiplexed command messages on pin 2 at 300 bits per second (bps) and sends status messages on pin 3 at the same speed. If the user ties pin 10 to a true level (e.g., jumpers it to pin 6 inside

the connector), the Bizcomp automatically determines the speed over the serial port by checking the first character it gets over the transmitted data line (this is sometimes called auto-baud operation).

Pin 20, Data Terminal Ready—When this signal is used, your serial port indicates its readiness to communicate via a positive voltage on this pin; if left unconnected at the serial port, the ready condition is assumed. When automatic answering is enabled (see below), the serial port may temporarily change this signal to false (negative) to suspend automatic answering.

Compatibility

One problem you might have in connecting the Bizcomp (or any similar device) to your serial port is the "sex" of the connector at the RS-232 interface and the "sense" of the connector wiring (i.e., Data Terminal Equipment [DTE] or Data Communications Equipment [DCE]). The computer's end of the interface is properly terminated with a cable ending in a male Cinch-type DB-25P connector, and is wired for DTE operation; the modem is (by definition) DCE, and its connector is always female. However, in order to make it simpler to connect the computer to other DTE devices (such as teleprinters), the computer's connector (probably female, in this case) may have been wired as a DCE interface; if so, an adapter (see Fig. 2 for schematic) is required.

Fig. 2. Null Modem adapter for interfacing Bizcomp with a computer wired as a DCE device.

Not included in the EIA RS-232 standard is a method by which signaling information such as telephone numbers, progress of the call and the like can be exchanged between the computer and the telephone system. Traditional methods of handling this problem are much more involved and expensive than are appropriate to a personal microcomputer, and until the Bizcomp solution appeared, completely automatic telephone communication was not easily avail-

able for many personal systems.

Code Multiplexing

Bizcomp's solution to the signalling problem is clever and effective. They use the same data paths (i.e., the Transmit Data and Receive Data signals) for signalling that are used for ordinary data transmission, but at different times.

When first turned on, the Bizcomp is in command mode. In this mode, any data transmitted by your system on pin 2 is automatically directed to the microprocessor in the modem, where it is interpreted as a command (such as to dial a telephone number or to enable automatic answering).

Once a data connection is established, it transfers to data mode, where it simply passes transmit and receive data to and from the telephone line. Data mode continues until the telephone connection is ended, either by the party at the other end of the connection or by your program's sending of a special two-character escape sequence (ASCII code DLE followed by EOT).

In either case, the end of the data connection is indicated to your system by a special signal called a "long space" or "break" followed by a status message from the Bizcomp indicating disconnection. The long space signal (not to be confused with the ASCII character called space) is sometimes called break, and is sent using the serial port's write break function. It is received as one or more characters which lack a stop bit, a condition called a framing error.

Code multiplexing requires that your system and the intelligent modem agree on which mode is in effect at any given time; this will avoid sending false commands to the modem and having your program confuse status and data messages received over the serial port. Also, should it ever be necessary to transmit data that duplicates the escape sequence (as might occur in transmitting a CP/M COM file), an alternate procedure must be available so that it can be treated as data instead of forcing the modem into command mode and disconnecting the call.

Keeping track of which mode is in effect is relatively simple. When power is applied to the Bizcomp (probably coincident with booting up your computer), command mode can be assumed. If for some reason this is not convenient, transmitting the escape sequence or a long space signal

to indicate that a compatible modem has answered the call or 2 CR to indicate that the call has failed (no answer or no modem at answering number). The program may assume that any data received after the 1 CR is from the remote terminal or system.

Repeat Dial—This command is similar to the dial command, except that the Bizcomp repeats the call attempt (until told to stop) if it is not successful (i.e., is not answered by a compatible modem). The command is STX followed by R followed by the telephone number (as above). The dial tone progress response (7 CR) is *not* given as it is with the dial command; the modem responds with 1 CR when an attempt is finally successful. Repeat dialing may be terminated by sending STX, to which the Bizcomp response is 2 CR. This function is useful for calling systems which are frequently busy, such as community bulletin boards. (The consequences of unwittingly using this command with a wrong number should be obvious, however.) Note that terminating this command requires a valid answer, positive action

by your program or disconnection of power to the Bizcomp.

Enable/Disable Auto Answer—STX A enables automatic answering; the response is CR. STX K disables automatic answering, and the response is the same. If your serial port

Bizcomp isolates the user
and his program
from the difficult re-
quirements
involved in connecting
a computer to the
telephone system...

can control the Data Terminal Ready line to the Bizcomp, a "false" level will inhibit automatic answering unconditionally.

Enable/Disable Transparency—The sequence STX X will enforce transparency thereafter. It can only be set or reset while the Bizcomp is in

command mode, which means that once it is set for a given call, it can't be reset. The reset command is STX Y. The response to both is CR.

Reset—Sending the ASCII character NUL to the Bizcomp resets it to the condition it had immediately after being turned on. You can get the same effect by sending a long space or break (100 ms or more) while the Bizcomp is in command mode. The response is a long space of 120 ms, which also occurs on power up.

Select Pulse/Tone Dial Mode—Initially, the Bizcomp is set for pulse dialing, which is compatible with most telephone systems. STX V will change it to use tone dialing until it is changed back with STX W (or it goes through a power-on reset). The response to both is CR.

Additional functions such as self-test, abort and interrogate stored telephone number, and functions related to TWX and leased line operation, are described in the complete and well-written reference manual.

A Simple Test

When I first got the Bizcomp, I connected it to the RS-232 port on a

INTRODUCING Pathfinder II A Satellite Tracking Package

For The
Apple II Plus™
By

Computer
Applications

THIS EASY TO USE AND UNDERSTAND PACKAGE ENABLES YOU TO: (1) Track circular orbit satellite in real time on a world or US map. (2) Print all data tables and maps on your Epson MX Printer. (3) Rapidly predict accessible orbits, reference orbits and all orbits between user specified dates. (4) Rapidly compute AOS time, LOS time, time in range, maximum elevation, CPA time, and CPA range. (5) Maintain a disk resident data base of satellite reference data.

SYSTEM REQUIREMENTS: Apple II Plus™, 48K RAM, DOS 3.3, Epson™ MX 80 JR100 Printer.

Pathfinder II is provided on a DOS 3.3 disk with a comprehensive users manual.

All This is Included in the Introductory Price of Only
\$34.95

Postage Paid (California Residents Add 6% Sales Tax)

Qume Sprint 5 teleprinter. I didn't need an adapter, as the Sprint 5 has a DTE interface. Simulating the computer program using the Sprint 5 keyboard, I browsed through the Bizcomp manual, trying various commands and checking the responses as I went along; everything worked as advertised. I created the long space using the keyboard's break key, and used the Sprint 5's error (i.e., framing error) lamp to note the reception of the same from the Bizcomp. This exercise made me feel more confident about writing a working program.

Let Your Modem Do the Walking

Let's take a look at a program that uses some of the Bizcomp 1022's intelligence. Listing 1 shows a Pascal program that I use to automatically dial up a local community bulletin board system (CBBS), which is often busy. This program uses the Intelligent Modem's Repeat Dial command to call the required number over and over until there's an answer. The program then informs the user of the connection and transfers data from the console keyboard to the modem

and from the modem to the console display. Input/output for the serial port (chip type 8251, in this case) is completely contained within the program, while services of the CP/M operating system are used to communicate with the console. When the Intelligent Modem indicates the connection is broken, a disconnect message is written on the console and the program exits to the operating system.

Summary

The Bizcomp is an excellent example of the application of the microprocessor to a fairly complex monitoring and control problem—data communications via the public telephone network. It successfully isolates the user and his program from all of the more difficult technical and legal requirements involved in connecting a computer to the telephone system, but without sacrificing any of the functions he needs for automatic operation. I expect this trend toward increased intelligence in computer peripherals to continue as the price of microprocessors continues to decrease. ■

A Super CP/M Utility

Relief for the terminally confused disk library is available—and inexpensive—with this master catalog system.

By Dick Lutz

I was about to form a chapter of File Seekers Anonymous. It was getting that bad. I had a choice, actually: Either I could call SCORE for a retired librarian to bail me out, or I could activate a serious cataloging system.

I was spending too much time tracking down diskfiles. I print STAT *. * labels for all my disks, of course, and keep the less active disks in plastic sleeves in three-ring binders. But it wasn't enough—just too many disks. And despite my best efforts to use specific floppies for specific jobs and sub-jobs, some "articles" become books, some files get misfiled, and some "jobs" become careers (two disks at least).

Table 1. Alphabetized output of CP/M disk cataloging program.

My solution is a CP/M catalog mastering system. What I use came from Elliam Associates on eight-inch single-density CP/M disks and cost \$10, but it's based on public domain program material written by Ward Christensen, whose name keeps showing up at the top of some of the most useful programs available from the CP/M User's Group. You can order from CP/MUG at \$8, but it's a good buy at the Elliam price of \$10, too, and some useful additional programs are included.

Here's how it works. You give each of your disks (and each side if you're flipping your disks) a unique name/

Table 2. Sample of output of all files in master catalog.

number that starts with a hyphen, like -LTRS.024 or -TAXES81.001.

You put it on the disk directory any way you like. Elliam's documentation recommends using ED to create an empty file on each target disk. So with the disk to be cataloged in the B: drive, you'd command ED B:-DISKNAM.000, and then respond to the prompting * with Q<cr> and answer Y to the "Quitting?" question. As with all CP/M file names, you're limited to an eight-space name and a three-space extension, so only seven characters can follow the hyphen, and only three numbers can follow the period.

Having done that, you can quickly catalog all you have. With your master catalog disk in the A: drive and a disk to be cataloged in the B: drive, you first command CATF B:*. * F. That yields an alphabetized list of files, with hex group locations on the disk, telling you the size of each file and its locations on the disk. (See Table 1.)

The trailing F in the command line causes a diskfile, NAMES.SUB, to be stored on the catalog master disk, consisting of all the filenames:

```
-CATART.001
ARTMAIN.PCL
ARTSIDE.PCL
CAT.COM
CATF.COM
CATMAKR1.PCL
```

TIME-PROVEN PERFORMANCE

While new printers with impressive specifications are introduced on an almost daily basis, only time will tell the true quality of the product. Over the past 2 years our customers have continued to buy the DS180 printer, not only because of its impressive performance and competitive price, but also because of our outstanding track record for product reliability and customer support.

We have continually improved on the performance of the DS180 by incorporating such enhancements as dot addressable graphics, 6 user-selectable print sizes and a 2000 character buffer. These features coupled with 180 cps printing, parallel and serial interfaces, adjustable tractor feed and over 40 other programmable features, make the DS180 one of the most versatile matrix printers available today.

Before you select your next printer, why not take a look at a time-proven performer—the Datasouth DS180.

The DS180 printer is available nationwide through our network of sales/service distributors.

Circle 7 on Reader Service card.

CATSDD.COM
CATU.COM
CONVERT.COM
COPY.COM

...etc.

When that's done, you command CATU, which merges the NAMES.SUB file into the MAST.CAT file on the disk in the A: drive. (It must be present when you start.)

When the process has been finished for all your disks, MAST.CAT will contain a full list of all your files, alphabetized by filename, with disk-name. In raw form, a part of it looks like the sample in Table 2. Using that alone, I can see I have four "saves" of EXECSUM.PCL on three disks, J+001.002, J+004.002 and J+002.001. As long as I know where to find each of those disks (kept in my "J" book, as it happens), I can easily find a backup copy.

But the key program of the bunch is what makes this resource indispensable after a while. That program extracts specific listings from within MAST.CAT. For example:

Commanding
CAT *.*.* #P

produces a printed (#P) master cata-

log list of all files on all disks.

Following that form,

CAT *.PCL *.*

produces a screen-only (no #P) display of all PCL-type files on all disks, or

CAT EX*.PCL J*.02* #P

produces a printed listing of all files named EX?????.PCL on all disks named -J?????.02?. In short, the standard CP/M conventions for wild-card use of * and ? apply.

Even better, it's possible to add a descriptive line:

Z-80 SINGLE BOARD COMPUTER \$49.95

The MASTER CONTROLLER BOARD contains:

- Z-80 Microprocessor: will run 8080/8085 and Z-80 programs.
- 72-Parallel I/O lines; three 8255s
- Keyboard controller: 8279
- 12K-EPROM: three sockets for 2708, 2716, 2732
- 2K-RAM: 2114s
- 8-Sixteen bit counter timer channels: one 8253 and one AMD 9513
- 2-Serial I/O ports; one Z-80 SIO chip. One port has an RS-232 interface and connector.
- 1-High speed arithmetic processor: AMD 9511

All the I/O chips are memory mapped AND I/O mapped. A bus expansion connector is provided. Can be operated on 5 volts only.

All this on one board less than nine inches on a side

Only three LSI chips (Z-80, 8255, and EPROM) plus support gates and buffers are required for a working controller.

BARE BOARD \$49.95
With documentation.

MINIMUM KIT. Includes bare board with documentation, one each Z-80, 8255, 2716, four 2114s, 4Mhz crystal, and support gates and buffers, all socketed. \$119.95

MONITOR PROGRAM allows a CRT or TTY to control the MASTER CONTROLLER. This program requires the minimum kit and the serial parts kit. A programmed 2716 and listing is supplied with the monitor. \$29.95. Listing Only \$19.95

SERIAL PARTS. Includes 8253, Z-80 SIO, 1488, 1489, sockets, and DB-25 connector \$49.95

POWER SUPPLY. 5V2A, -5V $\frac{1}{4}$ A, +12V $\frac{1}{4}$ A, -12V $\frac{1}{4}$ A. \$44.95

ASSEMBLED and TESTED fully populated with monitor program less 9511. \$399.00

USA & CANADA include \$3.50 postage and handling. We ship World Wide please include 15% for shipping.

CAT ???LAST.PCL ASM*.* March 19 last ASM versions #P yields a printed master catalog of all files satisfying ???LAST.* on all disks satisfying the name specification ASM*.*, with each page headed by the label MARCH 19 LAST ASM VERSIONS. (See Table 3.)

Selective Catalogs

A little care in use of the three-digit disk number and the seven-space disk name can make this a very useful function. Rather than numbering disks sequentially, for example, you might use the first digit to categorize material by system users: 1 for you, 2, 3, 4 and so on for others who have access to your system. The second and third digits might then be used according to individual preferences: 1 for correspondence, 2 for writing projects, 3 for data-only disks, 4 for program development, and so on. Such a plan would require that you use the filenames as the distinctive identity of each disk, of course, since duplicate numbers could arise.

Any good system will work. The important thing is to be able to use commands like CAT PH06*.PCL LTRS81*.* #P to print carefully targeted catalogs. That command might produce a listing of all letters (LTRS diskname) to "PH" (in filename) written in June (06) on any day (06*) of 1981.

Because MAST.CAT specifies a group of "ignore" filenames, you can keep programs like STAT.COM, which may appear on every CP/M disk you have, from being listed in the catalogs you take. Names listed at the head of the MAST.CAT file, bounded by parentheses, will not appear when CAT commands produce library directories:

```
(ASM.COM
DDT.COM
DENSITY.COM
ED.COM
PENCIL.COM
PIP.COM
STAT.COM)
```

You create that file in advance, of course; it's the first entry in MAST.CAT, and it must be present when cataloging commences. If you want all files listed, something like (DUMMY.FIL) must nonetheless be there, because CAT expects it.

The catalog can be updated, of course. When you've deleted or added files to a disk, you repeat the cataloging process. CATF B:*. * creates a new NAMES.SUB file, which

when merged (with the command CATU) into MAST.CAT produces an add/delete display like this:

```
ADD: ARTMAIN.PCL
ADD: ARTSIDE.PCL
DEL: NOTES.ASC
ADD: PART.MAS
DEL: TEMP4.PCL
```

MAST.CAT HAS 1030 ENTRIES.

There's an auxiliary program with the Elliam set, called CATS. It's provided in single-density form, but with an ASM form so it can easily be converted to double-density operation. Written originally by L. E. Hughes as SAP, and also available from CP/MUG, it sorts and packs the directory of a CP/M disk. After it's been used, the built-in DIR command yields an alphabetized listing of files. Then, because open (erased) directory entries are eliminated by CATS, anything out of alpha order at the end of a DIR listing is clearly something added since the last CATS run.

The master catalog package can change your disorganized ways. From Elliam Associates or the CP/M User's Group, it's a good buy... a CP/M "Super Utility." ■

Sources

"Membership" in the CP/M User's Group, which is not affiliated with Digital Research (owner of the CP/M trademark), comes with purchase of the \$6 catalog of 80 (and growing) disks available at \$8 each. Volume 40 contains the master catalog system, and can probably be purchased for \$8 without first purchasing the catalog. Write CP/M User's Group, 1651 Third Ave., New York City, NY 10028.

Additions to the catalog are published in *Lifelines*, \$24/year from Lifelines Publishing at the same address (also the address for the software house, Lifeboat Associates).

For \$10 (plus \$1.50 postage and handling) you can buy a disk containing the master catalog system and instructions from Elliam Associates, 24000 Bessemer St., Woodland Hills, CA 91367.

Elliam has other interesting programs available, and they can be packaged with the master catalog system, so you may want to write for information before sending you \$11.50. ■

Let Your Machine Do the Work

To make the cataloging process as easy as possible, you can automate with a SUBMIT routine. The best bet is to name all your disks in advance, by putting a null disk-name file in the directory of each disk. Then, Version One applies, and once the submit file is running all you need do is feed the disks to be cataloged to the B: drive.

(Note that the master catalog disk in drive A: must contain the necessary files, including SUBMIT.COM, CATMAKR1.SUB or CATMAKR2.SUB, CATF.COM, CATU.COM, CATSDD.COM or any other utility to be placed on the disk in the B: drive.)

CATMAKR1.SUB (Version one). If you've already named each disk you plan to catalog, this SUBMIT file will save a lot of keystrokes. Invoked with the command A>SUBMIT CATMAKR1, it runs through the disks you put in the B: drive. Your only job is to keep up. The lines in lowercase are optional.

```
dir b:
era b:temp*.*
pip b:=a:catsdd.com[v]
CATF B:.* F
stat con:=tty:
type bell.asc
stat con:=crt:
CATU
SUBMIT CATMAKR1
```

You need the first line only if you intend to use the second or third line. The third can be used if you want to add a new system utility to every disk being cataloged, while the second is useful if you want to delete old TEMP*.* files. I use it because during document editing I use TEMP1, TEMP2, etc., as an audit trail, and when I forget to erase the temporary files, they litter my disks.

The fifth through seventh lines of CATMAKR1.SUB are useful if you want to be prompted for each new disk. Create the file BELL.ASC containing only a control G (bel), and change disks when you hear the warning. The preceding and following STAT commands switch output from CRT to printer and back.

CATMAKR2.SUB Version two is used if the target disk is to be given a name during the run. The invocation is in the form SUBMIT

CATMAKR2 DISKNAM.NUM in which DISKNAM is the title you've chosen for the target disk. Again, the lines in lowercase are optional.

```
DIR B:
era b:temp*.*
ED B: -$1 (In CP/M 1.x you must respond
to the prompt * with Q <cr>
Y; in the CP/M 2.x, you can
use the XSUB capability, and
include them in the controlling
submit file.)
```

```
stat b:.*
pip b:=a:catsdd.com[v]
CATF B:.* F
CATU
```

In this form, the CATMAKRx submit routine doesn't run continuously. It would be relatively easy, however—if you happen to have an enormous cataloging job to do and wish to automate—to write a Basic program which is invoked during the SUBMIT run with the line MBASIC DISKNAMR in place of ED B: -\$1.

Its task would be to name a disk by opening and closing a null file on the target disk, make a diskfile note (on the master catalog disk in A:) of the name it used, and then return to SYSTEM (to control of the submit file). Each time it's invoked, the Basic program would be required to update the title to be used by incrementing it one step. When this is done, the last line of the CATMAKR2.SUB file should be SUBMIT CATMAKR2, as in the continuous-run version one. ■

Tune Up Your Basic Programs

For the programmer looking to sell his software, these programming tips show you how to increase the speed of your Basic programs and could mean the difference between a marketable and non-marketable product.

By Henry A. Seymour

The most common programming language is still Basic, a language which is simple in syntax but has enough power to perform a variety of operations. Basic was designed as an interpreter, to scan each statement, convert it into machine code and then execute that code. Because Basic was not intended to be a production software tool, there was no need to save the object code or to be overly concerned with data structures, control structures and optimization.

Basic, however, has grown beyond the purposes of its designers and now is used in homes and businesses. An entire industry has evolved that offers software spanning the full range of applications: business programs, scientific programs and games. For programming for personal use in any of these fields, slight inefficiencies may not be critical. When marketing a program, however, computer time and memory requirements are important. Sometimes one or both may be the difference between a program that is marketable and one that is not.

Optimization is an important technique which will make the most efficient use of computer time and memory. Computer time and memory use are sometimes at opposite ends of the scale, requiring the programmer to choose which is more important.

I'll discuss some programming techniques that you could use to im-

prove the performance of a Basic program. Although there have been some Basic compilers written, I'm assuming in this article that you're using a Basic interpreter.

Constant Folding

Given the intent that L will never change, a typical set of instructions would be,

```
100 LET L = 5
...
400 LET K = L + 3
```

The interpreter has no way of improving this type of code because it evaluates only one instruction at a time. Each time statement 400 is executed, the interpreter generates the code to load the constant L (5) and add 3. The improved version is,

```
400 LET K = 8
```

When using an interpreter it is often more costly to use constants instead of variables. Consider the following:

```
500 FOR I = 1 TO K
600 LET L = L + 4235
700 NEXT I
```

During each iteration of lines 500 through 700, the constant 4235 is rescanned and converted into an internal form. Even though 4235 is a constant, execution time would be faster if it were placed into a variable name such as,

```
400 LET N = 4235
500 FOR I = 1 TO K
600 LET L = L + N
700 NEXT I
```

This technique expands the program size by one line for each con-

stant, but the increase in speed could be worth it. The amount of computer time saved depends on the number of digits in the constants and the number of times they must be converted.

Reduction in Strength

Each arithmetic operation (addition, subtraction, multiplication, division and exponentiation) requires a fixed amount of time to perform. Knowing the cost of each operator can help the programmer choose the most efficient way to state arithmetic expressions. For example, in the case of exponentiation,

```
100 LET A = B ** 2
```

is more expensive than,

```
100 LET A = B * B
```

yet they are mathematically equivalent.

Multiplication is more expensive than addition; therefore,

```
100 LET A = B * 2
```

is more expensive than,

```
100 LET A = B + B
```

Division is more expensive than multiplication; therefore,

```
100 LET A = X/2
```

should be replaced by,

```
100 LET A = X * .5
```

The time requirement for each of the arithmetic instructions is machine dependent. The amount of time saved by these programming techniques depends on the time requirements of the individual instructions and the frequency of their occurrence.

Address correspondence to Dr. Henry A. Seymour, Senior Designer, Computer Systems, Computer Services Department, Martin Marietta Aerospace, Box 29304, Dept. 3412, New Orleans, LA 70189.

Reduced Expressions

Many times an expression is stated in a form such as,

```
100 A = X * Y + X * Z
```

The variable X, however, will be involved in two multiplications. A more efficient alternative would be,

```
100 LET A = X * (Y + Z)
```

This reduces the expression to one addition and one multiplication. In general, you should analyze each expression to determine whether any part of it could be represented by a less expensive arrangement.

Common Subexpressions

A common subexpression can occur throughout a program and consume a large amount of computer time and memory. The following contains a common subexpression, X + Y.

```
100 LET A = X + Y + W
200 LET B = R + X + Y
```

The improved version would evaluate the subexpression only once:

```
100 LET T = X + Y
200 LET A = T + W
300 LET B = R + T
```

Although the improved version is one statement longer, it contains only three additions, compared to four in the original. The amount of computer time and memory saved depends on the number of expressions that can be substituted.

Subexpressions are also useful in working with subscripted variables. For example,

```
100 LET A (L + M) = A (L + M) + W
```

has the subscript L + M which would be evaluated twice. This could be improved by,

```
100 LET T = L + M
200 LET A (T) = A (T) + W
```

In general, time and memory can be saved by eliminating repetitious evaluations of expressions.

Multiple Jumps

The use of goto statements has recently come under criticism. It is true that their indiscriminate use makes subsequent modifications difficult. Many of the problems with the goto statement, however, are due to its misuse. An improper use of a goto statement, causing a jump over jump, is,

```
100 IF X > Y THEN 300
200 GOTO 500
300 LET E = E + N
...
500 ...
```

An improved version is,

```
100 IF X <= Y THEN 500
200 LET E = E + N
...
500 ...
```

Simply reverse the logic of the if...then statement to improve speed and readability.

Loop Unrolling

If a program contains a loop, such as

```
100 FOR L = 1 TO 64
200 LET A (L) = P
300 NEXT L
```

execution time can be improved, if memory is available, as follows:

```
100 FOR L = 1 TO 64 STEP 2
200 LET A (L) = P
300 LET A (L + 1) = P
400 NEXT L
```

Line 200 was expanded to two statements, doubling the amount of work done in each iteration of the loop. The time required for completion of

THE MULTI-USER FRIENDLY MEMORY BOARD WITH

NO COMPROMISE

- ☐ 256 kilobytes 150 NS dynamic ram
- ☐ Designed to operate in any S-100 System IEEE or Non-IEEE
- ☐ 16-bit addressing option: Powerful Macrotech Memory Mapping (M³) bank select architecture allows each 4K block of the 16 bit (64K) logical addresses to be dynamically translated to any 4K block of the 256K on board physical memory.
- ☐ 24-bit direct addressing option

- ☐ "Educated" cycle control module generates all timing on board asynchronously for maximum access speed and uniform operation
- ☐ Comprehensive technical manual with complete installation guide and source listings for MP/M II™ and "Virtual Disk" solid state disk applications.
- ☐ DMA operation fully supported in strict accordance with IEEE 696 standard.
- ☐ 8/16 data transfer protocol
- ☐ Parity error detection

- ☐ Multilayer board and bus signal filtering for noise-free operation.
- ☐ Full one year warranty

If you wish, send a check or money order for \$1,379 (in California add 6% sales tax where applicable). Manual available at \$25.00 each refundable with order.

California 91303
(213) 887-5737

the loop was reduced by 50 percent. The decision was made to increase speed at the cost of memory.

Loop Jamming

Matrix operations are used in many programs and, in many instances, are adjacent to each other. For example, a matrix initialization might be,

```
100 FOR C = 1 TO 5
200 FOR R = 1 TO 5
300 LET A (R, C) = 4
400 NEXT R
500 NEXT C
600 FOR C = 1 TO 5
700 LET A (C, C) = 3.1416
800 NEXT C
```

In this example there are two operations on matrix A. First, each cell of the matrix is set to 4. Second, the diagonal from A(1,1) to A(5,5) is set to 3.1416. Each loop requires a test for completion, so statement 400 will be performed 25 times, statement 500 will be performed five times and 800, five times.

But the second loop can be included in the first, thus reducing the number of tests. For example,

```
100 FOR C = 1 TO 5
200 FOR R = 1 TO 5
```

```
300 LET A (R, C) = 4
400 NEXT R
500 LET A (C, C) = 3.1416
600 NEXT C
```

In this example only one matrix is involved; however, it is possible to operate on more than one at a time if they have the same dimensions. For example,

```
100 FOR C = 1 TO 5
200 FOR R = 1 TO 7
300 FOR A (R, C) = 6
400 NEXT R
500 LET B (C) = 8
600 NEXT C
```

In the example above, matrix B has the same number of rows and columns as matrix A.

Code Hoisting

Operations are sometimes mistakenly placed inside a loop. For example,

```
100 FOR L=1 TO 5
200 LET D=X+Y
300 LET A (L)=A (L)+R
400 NEXT L
```

The value of D does not change, but it is recalculated during each pass of the loop. An improved version is,

```
100 LET D=X+Y
200 FOR L=1 TO 5
300 LET A (L)=A (L)+R
```

```
400 NEXT L
```

The amount of time saved is the product of the time required to execute the instruction and the number of times it is executed.

Branching

Making a decision to branch to some other part of a program can be more expensive than you might imagine. Consider the following:

```
100 IF B=1 THEN 1400
200 IF B=2 THEN 1500
300 IF B=3 THEN 1600
```

If B is 3 most of the time, then the order of testing should be rearranged:

```
100 IF B=3 THEN 1600
200 IF B=1 THEN 1400
300 IF B=2 THEN 1500
```

A significant amount of speed might be gained by reordering if...then statements, at no increase in memory use.

The same applies to on...goto statements.

Summary

Some code improvement features are available in the new Basic compilers, but when using an interpreter it is your responsibility to program efficiently. ■

80's 3 in 83!

80 MICRO magazine will be three years old in January of 1983.

And to celebrate, we're publishing a special limited edition ANNIVERSARY ISSUE!

- *all new articles and programs.
- *over 500 pages of the same 80 MICRO quality.
- *dozens of games and programs for your TRS-80*.
- *exclusive articles by well-known authors.

- *tutorials on buying peripherals and software.
- *a 3-year 80 MICRO index—annotated and cross-referenced.
- *page after page of Christmas specials in colorful holiday ads.
- *the most in-depth coverage of the Color Computer yet.

PLUS—In every Anniversary Issue of 80 Micro, you'll find a free pair of 3-D stereoscopic glasses to use with the first 3-D stereoscopic computer graphic, ever.

You can also get the amazing Special Edition LOAD 80 Companion to the Anniversary Issue. All those games and programs just waiting for you to load. No more keyboarding. No more debugging. No more hassles.

You'd expect all new Special Editions of this quality to cost you hundreds of dollars. (Well, maybe tens.) But for a limited time only you can get the 80 MICRO Anniversary Issue for only \$5.95. That's right—\$5.95. The LOAD 80 Companion is just \$9.95 for cassette. \$19.95 for floppy disk. So order your very own copy of the Anniversary Issue and LOAD 80 Companion. Give them as gifts. Call toll free 1-800-258-5473. And hurry! Supplies are limited! Operators are standing by (during business hours).

...written by technically competent editors and columnists. *inCider* is designed to provide you with the *newest* and *best* for your Apple.

Want to know the easiest way to get the kinks out of your programs? *inCider* will show you. Want to know which peripherals have the best history and the brightest future? *inCider* will tell you. Want to expand your knowledge

of hardware? Or become an expert programmer? Want to discover which word processors give you the most for your money? Or how your Apple can better manage your financial affairs? *inCider* will answer these and many other questions each month.

The inaugural issue of *inCider* will be available in early December. And you can become a Charter Subscriber to *inCider* for only \$19.97! Fill out the attached reply card and drop it in the mail, or use the coupon below. Or call toll free

1-800-258-5473

And here's a special bonus offer: enclose payment (check or credit card #) with your order and you'll receive a 13th issue of *inCider* absolutely free!

Be an *inCider* and get more useable information for your Apple than you ever dreamed possible.

Subscribe to *inCider* today.

*Apple is a trademark of Apple Computer Inc.

YES, I want to be an inCider. Send me 12 issues for only \$19.97.

☐ CHECK ☐ MC ☐ VISA ☐ AE ☐ BILL ME ☐ I have enclosed payment—please put me down for my free 13th issue.

Aide for Harried Programmers

Hexadecimal, split-octal, decimal. . . got your head turning around in circles? Here's a programming tool to help you convert various computer number systems in a flash.

By J. T. Donlon

Rare is the computer user or programmer who can readily evaluate and calculate in number systems other than the decimal system. Even if you understand the theories of hexadecimal, octal, split-octal and binary systems, you may still find them as difficult as a foreign language if you're an occasional user. Even accomplished programmers resort to special calculators and software to work accurately and efficiently with these number systems. The accompanying conversion aid (see Fig. 1) provides an alternative method for quickly dealing with numbers and addresses to 64K. Use simple interpolation procedures for numbers greater than 256₁₀.

Although a basic understanding of the theory of the binary, octal, split-octal and hexadecimal number systems is helpful, you don't need it to use the conversion aid. This technique requires only tabular cross-referencing and regular decimal addition or subtraction for interpolation. I've provided an example of each type of conversion for speedy comprehension of the procedures involved (see Examples 1 through 7).

Fig. 1 covers the entire 64K address field of the normal microcomputer. This corresponds to all numbers that can be coded in two eight-bit words or bytes. In order to compress all this information into a one-page table, I've split each address or number in two; this corresponds to how the numerical value is stored and handled

		HEXADECIMAL/SPLIT-OCTAL/DECIMAL CONVERSION AIDE															
1st Hex Digit		2nd Hexadecimal Digit															
		0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F

Data base management: Check out the essentials.

CHECKLIST

Before You Buy A DBMS Check These 10 Essential Aspects.

- ☐ 1. **Data Integrity:** Does it protect against data corruption, erroneous data entry, and unauthorized relationships?
- ☐ 2. **Physical Data Protection:** Are recovery and restart capabilities provided? Can you roll the data base back to a previous state?
- ☐ 3. **Data Security:** Does it provide separate "read" and "write" access controls? Down to the item level? Is data encryption provided?
- ☐ 4. **Data Independence:** Can the data base structure be modified without changing previous programs?
- ☐ 5. **Performance:** Can you tune performance by controlling physical storage? Can you eliminate data redundancy? Are variable length records and data compression provided? Are response times acceptable for large data bases?
- ☐ 6. **Multi-User:** Does it support concurrent multi-user access with passive and active locking at the record level?
- ☐ 7. **Ease of Use:** Can many-to-many and recursive relationships be directly defined? Can programs be written in any major programming language? Are instructions short and simple? Is quality documentation available?
- ☐ 8. **Query Report System:** Can ad hoc queries be easily made with non-procedural, English-like statements? Are sophisticated reports available from pre-defined queries? Are nested queries supported?
- ☐ 9. **Portability:** Does the DBMS run under CP/M™, MP/M, CP/M-86, MP/M-86, PC DOS™, UNIX™? On Z80™, 8086, 8088, 68000, and PDP-11™? Does it run with COBOL, Pascal, FORTRAN, PL-1, BASIC and C?
- ☐ 10. **Support:** Are professional training, regular product updates, enhancements, and professional consulting all available?

Problem: Convert $30,000_{10}$ to split-octal.
 First Cross Reference $29,952_{10} = 165_8$ MSB
 Interpolation $30,000 - 29,952 = 048_{10}$
 Second Cross Reference $048_{10} = 60_8$ LSB
 Answer: $30,000_{10} = 165_8/060_8$ (split-octal)

Example 1.

Problem: Convert $30,000_{10}$ to hexadecimal.
 Same method as example 1 except,
 $29,952_{10} = 75_{16}$ MSB
 $048_{10} = 30_{16}$ LSB
 Answer: $30,000_{10} = 7530_{16}$

Example 2.

Problem: Convert $165_8/060_8$ (split-octal) to decimal.
 First Cross Reference $165_8 = 29,952_{10}$ MSB
 Second Cross Reference $060_8 = 048_{10}$ LSB
 Interpolation $29,952 + 048 = 30,000_{10}$
 Answer: $165_8/060_8 = 30,000_{10}$

Example 3.

Problem: Convert $165_8/060_8$ to hexadecimal.
 Same method as example 3 except,
 $165_8 = 75_{16}$ MSB
 $060_8 = 30_{16}$ LSB
 Answer: $165_8/060_8 = 7530_{16}$

Example 4.

Problem: Convert $EA60_{16}$ to decimal.
 First Cross-Reference $EA_{16} = 59,904_{10}$ MSB
 Second Cross-Reference $60_{16} = 096_{10}$ LSB
 Interpolation $59,904 + 096 = 60,000_{10}$
 Answer: $EA60_{16} = 60,000_{10}$

Example 5.

Problem: Convert $EA60_{16}$ to split-octal.
 Same method as example 5 except,
 $EA_{16} = 352_8$ MSB
 $60_{16} = 140_8$ LSB
 Answer: $EA60_{16} = 352_8/140_8$

Example 6.

in eight-bit computers. The split results in a least significant byte (LSB) and a most significant byte (MSB).

The aid (Fig. 1) can now be set up as a 16×16 matrix with hexadecimal

(617) 485-5115

Problem: Convert $352_8/140_8$ to octal (using Fig. 3).

	MSB								LSB							
	3		5		2		1		4		0					
Step 1.	1	1	1	0	1	0	1	0	0	1	1	0	0	0	0	0
Step 2.	1		6		5		1		4		0					

Answer: $352_8/140_8 = 165140_8$

Note: Octal spans the boundary between the MSB and LSB and does not permit separate manipulation of the eight-bytes, in particular the MSB. The easy way to get around this is to use binary as an intermediate step in any conversion involving octal.

Example 7.

Number Systems	Most Significant Byte								Least Significant Byte							
Split-Octal-----	3		6		5		2		5							7 ₈
Hexadecimal-----	F				5				A							F ₁₆
Binary-----	1	1	1	1	0	1	0	1	1	0	1	0	1	1	1	1
Octal-----	1		7		2			6					5			7 ₈

Note: Straight octal has carryover problem between eight-bit bytes.

Fig. 2. Typical number systems relationship.

Hexadecimal						Octal
		0	0	0	0	
0 ₁₆		0	0	0	0	0 ₈
1		0	0	0	1	1
2		0	0	1	0	2
3		0	0	1	1	3
4		0	1	0	0	4
5		0	1	0	1	5
6		0	1	1	0	6
7		0	1	1	1	7
8		1	0	0	0	10
9		1	0	0	1	11
A		1	0	1	0	12
B		1	0	1	1	13
C		1	1	0	0	14
D		1	1	0	1	15
E		1	1	1	0	16
F ₁₆		1	1	1	1	17 ₈
		Binary				

Fig. 3. Binary, octal and hexadecimal codes.

indices. The first hexadecimal digit of a byte is located by the vertical index, and the second hexadecimal digit by the horizontal index. Each hexadecimal number is repeated as the first number at each intersection of the matrix—I set it up this way to make the conversion aid easy to use.

The second number at each intersection is the octal number for the equivalent LSB. For split-octal, this octal number also applies to an equivalent MSB number. The third number at each intersection is the decimal value for the LSB; the fourth number is the decimal value for the MSB. This helps you relate your familiarity with the decimal system to the other number systems.

The Heath Company uses the split-octal number system, which treats each eight-bit binary byte separately—just as it is stored and handled in an eight-bit computer system. Fig. 2 shows how a typical 16-bit (two-byte) binary address or number is represented in each popular number system. Fig. 3 provides a detailed comparison of binary, octal and hexadecimal codes.

The splitting technique doesn't work for octal numbers greater than 377₈, because the hundreds-digit lies across the boundary between the MSB and LSB (see Fig. 2). When you're working with two-byte values, it's better to use hexadecimal or split-octal numbers because you can directly convert each eight-bit byte from binary without manipulating bits. ■

ATR8000: THE DOUBLE DENSITY DISK INTERFACE FOR THE ATARI® 800/400

The ATR8000 disk interface converts your ATARI 800/400 into a business machine ... at an affordable cost. The ATR8000:

- Comes with 16K RAM which can be upgraded to 64K.
- Operates standard 5¼" or 8" drives.
- Has a Z80 4MHz controller.
- Software compatible with existing ATARI software.
- Is double density with OSA+ Version 4 DOS.
- Has a serial and a parallel port.
- Is CP/M compatible (with 64K upgrade).

ATR8000 \$499.95 5¼" drive \$399.95
OSA+ Ver. 4 \$ 49.95 5¼" dr. cable \$ 35.00

Computer Products International presents the PAY-WARE PAYROLL SYSTEM

Pay-Ware was designed by CPI to meet the needs of the business person who will actually process the payroll. We offer programs created for Apple (Apple Soft) and Commodore 8000 or 9000 series with an 8050 disk drive plus a 3rd package designed for any CP/M computer. CPI has been in business for 20 years and has pioneered and developed payroll packages that are in use in over 30 States. **Pay-Ware** offers a complete payroll package including year-end processing. The initial package (which can be up-graded) is priced at only \$395.00 (\$200 down, balance in 30 days).

CONVERSIONS

Each month Microcomputing will publish Apple, Atari, Commodore, Heath or IBM PC translations of selected programs published in the magazine. We encourage our readers to submit a hard copy of their conversions along with a cassette or disk of the program. Include a self-addressed, stamped envelope for the return of magnetic media if not selected for publication. Authors whose translations are chosen will receive payment for their efforts.

The following listings are translations of the stock market simulation game, "Black Friday," published in the September 1982 issue of *Microcomputing* (p. 88). The first, for the Apple, was submitted by Vincent R. Johns (5117 SE 55th St., Oklahoma City, OK 73135). Gary Stachelski's (818 15th Ave., Prospect Park, PA 19076) translation for the Heath H89 follows.

Next month, IBM PC owners, it will be your turn. We will publish a Black Friday translation for the IBM Personal Computer.

YOU'VE JUST FOUND THE MISSING LINK!

Computer Shopper is your link to individuals who buy, sell and trade computer equipment and software among themselves nationwide. No other magazine fills this void in the marketplace chain.

Thousands of cost-conscious computer enthusiasts save by shopping in Computer Shopper every month through hundreds of classified ads. And new equipment advertisers offer some of the lowest prices in the nation.

Computer Shopper's unbiased articles make for some unique reading among magazines and there's a "help" column to answer difficult problems you may have with interfacing, etc.

For a limited time you can subscribe to Computer Shopper with a 6 month trial for only \$6 or 12 months for only \$10. MasterCard & VISA accepted.

6 month trial \$6 or 12 months for only \$10

GOSUB International, Inc. presents

The **CARDBOARD** for the VIC 20! The **CARDBOARD** is an expansion motherboard for use with Commodore's VIC 20 series computers. It has six slots that will accept any VIC-compatible cartridge in any configuration.

Increase RAM up to 40K and use several utility ROMs plus have several games online, all switch selectable!

The **CARDBOARD** can be daisy-chained, giving the user an almost unlimited number of available expansion slots.

A system reset switch has also been added to the **CARDBOARD** allowing the user to select and/or restart games on ROM without turning off the computer.

All this for only \$119.95 plus \$1.50 S/H

To order send check or money order to:

GOSUB International, Inc.
501 E. Pawnee, Suite 430
Wichita, Kansas 67211
(316) 265-9858

VISA and MasterCard phone orders also accepted

64K Static RAM \$299.95

S-100 CPU Boards

8086/8087 - CompuPro

16 bit, 8 or 10 MHz 8086 CPU with provisions for 8087 & 80130.

CPU-70520A 8 MHz 8086 A & T	\$624.95
CPU-70520C 8 MHz 8086 CSC	\$764.95
CPU-70530A with 8087 A & T	\$1224.95
CPU-70530C with 8087 CSC	\$1455.95

8085/8088 - CompuPro

Both 8 & 16 bit CPUs, standard 8 bit S-100 bus, up to 8 MHz, accesses 16 Megabytes of memory.

CPU-20510A 6 MHz A & T	\$398.95
CPU-20510C 6/8 MHz CSC	\$497.95

CPU-Z - CompuPro

2.4 MHz Z80A CPU, 24 bit addressing.

CPU-30500A 2.4 MHz A & T	\$279.95
CPU-30500C 3/6 MHz CSC	\$374.95

SBC-200 - SD Systems

4 MHz Z-80A CPU with serial & parallel I/O, 1K RAM, 8K ROM space, monitor PROM included.

CPC-30200A A & T	\$399.95
------------------	----------

THE BIG Z - Jade

2 or 4 MHz switchable Z-80 CPU board with serial I/O, accommodates 2708, 2716, or 2732 EPROM, baud rates from 75 to 9600.

CPU-30201B Bare board w/manual	\$35.00
CPU-30201K Kit with manual	\$149.95
CPU-30210A A & T with manual	\$199.95

CB-2 - SSM Microcomputer

2 or 4 MHz Z-80 CPU board with provision for up to 8K of ROM or 4K of RAM on board, extended addressing, IEEE S-100, front panel compatible.

CPU-30300K Kit with manual	\$229.95
CPU-30300A A & T with manual	\$274.95

2810 Z-80 CPU - C.C.S.

2 or 4 MHz Z-80 CPU with serial I/O port & on-board monitor PROM, front panel compatible.

CPU-30400A A & T with PROM	\$289.95
----------------------------	----------

2820 Z-80 DMA CPU - C.C.S.

4 MHz Z-80 CPU board with 2 serial I/O ports & Centronics parallel I/O port, separate data & status ports, DMA daisy chain compatible.

CPU-30420A A & T with manual	\$569.95
------------------------------	----------

S-100 Disk Controllers

DISK 1 - CompuPro

8" or 5 1/4" DMA disk controller, single or double density, single or double sided, 10 MHz.

IOD-1810A A & T	\$449.95
IOD-1810C CSC	\$554.95
SFC-52506580F 8" CP/M 2.2 for Z-80	\$174.95
SFC-52506586F 8" CP/M 2.2 for 8086	\$299.95
SFO-54158000F Oasis single user	\$499.95
SFO-54158002F Oasis multi-user	\$849.95

VERSAFLOPPY II - SD Systems

Double density disk controller for any combination of 5 1/4" and 8" single or double sided, analog phase-locked loop data separator, vectored interrupts, CP/M 2.2 & Oasis compatible, control/diagnostic software PROM included.

IOD-1160A A & T with PROM	\$359.95
SFC-55009047F CP/M 2.2 with VF II	\$99.95

2242 DISK CONTROLLER - C.C.S.

5 1/4" or 8" double density disk controller with on-board boot loader ROM, free CP/M 2.2 & manual set.

IOD-1300A A & T with CP/M 2.2	\$399.95
-------------------------------	----------

DOUBLE D - Jade

High reliability double density disk controller with on-board Z-80A, auxiliary printer port, IEEE S-100, can function in multi-user interrupt driven bus.

IOD-1200B Bare board & h/w man	\$59.95
IOD-1200K Kit w/hdw & sftwr man	\$299.95
IOD-1200A A & T w/hdw & sftwr man	\$325.95
SFC-59002001F CP/M 2.2 with Double D	\$99.95

Prices may be slightly higher at our retail locations. Please call the store nearest you for local price and availability.

S-100 Memory Boards

256K RAMDISK - SD Systems

ExpandoRAM III expandable from 64K to 256K using 64K x 1 RAM chips, compatible with CP/M, MP/M, Oasis, Cromemco, & most other Z-80 based systems, functions as ultra-high speed disk drive when used with optional RAMDISK software.

MEM-65064A 64K A & T	\$474.95
MEM-65128A 128K A & T	\$574.95
MEM-65192A 192K A & T	\$674.95
MEM-65256A 256K A & T	\$774.95
SFC-55009000F RAMDISK sftwr CP/M 2.2	\$44.95
SFC-55009000F RAMDISK with EXRAM III	\$24.95

128K RAM 21 - CompuPro

128K x 8 bit or 64K x 16 bit static RAM board, 12 MHz, 24 bit addressing.

MEM-12810A A & T	\$1609.95
MEM-12810C CSC	\$1794.95

64K RAM 17 - CompuPro

64K CMOS static RAM board, 10 MHz, low power less than 4 watts, DMA compatible, 24 bit addressing.

MEM-64180A 64K A & T	\$549.95
MEM-64180C 64K CSC	\$698.95

64K RAM 16 - CompuPro

32K x 16 bit or 64K x 8 bit low power static RAM board, 10 MHz, 24 bit addressing.

MEM-32180A RAM 16 A & T	\$598.95
MEM-32180C RAM 16 CSC	\$698.95

64K STATIC RAM - SSM

IEEE 696/S-100 standard, up to 6MHz/8 Bit, 12MHz/16 Bit, 24 Bit extended addressing, disable-able in 2K increments

MEM-64300A A & T	\$499.95
------------------	----------

64K STATIC RAM - Mem Merchant

64K static S-100 RAM card, 4 to 16K banks up to 8 MHz.

MEM-64400A 64K A & T	\$499.95
----------------------	----------

64K STATIC RAM - Jade

Uses new 2K x 8 static RAMs, fully supports IEEE 696 24 bit extended addressing, 200ns RAMs, lower 32K or entire board phantomable, 2716 EPROMs may be subbed for RAMs, any 2K segment of upper 8K may be disabled, low power typically less than 500ma.

MEM-99152B Bare board	\$49.95
MEM-99152K Kit less RAM	\$99.95
MEM-32152K 32K kit	\$199.95
MEM-56152K 56K kit	\$289.95
MEM-64152K 64K kit	\$299.95
Assembled & Tested	add \$50.00

2066 64K RAM - C.C.S.

64K RAM board with bank and block select switching functions for Cromemco Cromix & Alpha Micro.

MEM-64566A 64K A & T	\$424.95
----------------------	----------

64K EXPANDORAM II - SD Systems

Expandable RAM board from 16K to 64K using 4116 RAM chips.

MEM-16630A 16K A & T	\$344.95
MEM-32631A 32K A & T	\$364.95
MEM-48632A 48K A & T	\$384.95
MEM-64633A 64K A & T	\$399.95

MEMORY BANK - Jade

4 MHz S-100 bank selectable expandable to 64K.

MEM-99730B Bare board w/manual	\$49.95
MEM-99730K Kit with no RAM	\$179.95
MEM-32731K 32K kit	\$199.95
MEM-64733K 64K kit	\$249.95
Assembled & Tested	add \$50.00

16K STATIC RAM - Mem Merchant

4MHz lo-power static RAM board, IEEE S-100, bank selectable, addressable in 4K blocks, disable-able in 1K segments extended addressing.

MEM-16171A 16K A & T	\$149.95
----------------------	----------

S-100 I/O Boards

SYSTEM SUPPORT 1 - CompuPro

Real time clock, three 16 bit interval timers, dual interrupt controllers(15 levels), up to 4K EPROM/RAM, RS-232C serial channel, provision for 9511A/9512 math chip.

IOX-1850A SS1 A & T	\$359.95
IOX-1850C SS1 CSC	\$459.95
IOX-1855A with 9511 A & T	\$554.95
IOX-1855C with 9511 CSC	\$654.95
IOX-1860A with 9512 A & T	\$554.95
IOX-1860C with 9512 CSC	\$654.95

INTERFACER 1 - CompuPro

2 serial I/O ports 50-19.2K baud.

IOI-1810A A & T	\$218.95
IOI-1810C CSC	\$288.95

INTERFACER 2 - CompuPro

3 parallel, 1 serial, & interrupt timer.

IOI-1820A A & T	\$218.95
IOI-1820C CSC	\$288.95

INTERFACER 3 - CompuPro

5 or 8 channel serial I/O board for interrupt driven multi-user systems up to 250K baud.

IOI-1835A 5 port A & T	\$558.95
IOI-1835C 5 port CSC	\$628.95
IOI-1838A 8 port A & T	\$628.95
IOI-1838C 8 port CSC	\$749.95

INTERFACER 4 - CompuPro

3 serial, 1 parallel, 1 Centronics parallel.

IOI-1840A A & T	\$314.95
IOI-1840C CSC	\$414.95

MPX - CompuPro

Multi-user I/O multiplexer & interrupt controller with on-board 8085A-2 CPU & 4K or 16K of RAM.

IOI-1875A 4K MPX A & T	\$444.95
IOI-1875C 4K MPX CSC	\$534.95
IOI-1880A 16K MPX A & T	\$584.95
IOI-1880C 16K MPX CSC	\$674.95

I/O-8 - SSM Microcomputer

Eight software programmable serial I/O ports, 110 -19.2K Baud, ideal for multi-user systems

IOI-1018A A & T	\$469.95
-----------------	----------

I/O-5 - SSM Microcomputer

Two serial & 3 parallel I/O ports, 110-19.2K Baud

IOI-1015A A & T	\$289.95
-----------------	----------

MPC-4 - SD Systems

Intelligent 4-port serial I/O card, on-board Z-80A, 2K RAM, 4K PROM area, on-board firmware, fully buffered, vectored interrupts, four CTC channels, add to SD Board set for powerful multi-user system

IOI-1504A A & T w/software	\$495.00
----------------------------	----------

I/O-4 - SSM Microcomputer

2 serial I/O ports plus 2 parallel I/O ports.

IOI-1010B Bare board w/manual	\$35.00
IOI-1010K Kit with manual	\$179.95
IOI-1010A A & T with manual	\$249.95

2830 6 PORT SERIAL - C.C.S.

Six asynchronous RS-232C serial I/O ports with programmable baud rates.

IOI-1040A A & T with manual	\$529.95
-----------------------------	----------

2710 4 PORT SERIAL - C.C.S.

Four RS-232C serial I/O ports with full handshaking.

IOI-1060A A & T with manual	\$319.95
-----------------------------	----------

2719 2 SER & 2 PAR - C.C.S.

Two RS-232C serial I/O ports plus two 8 bit parallel I/O ports.

IOI-1080A A & T with manual	\$349.95
-----------------------------	----------

Disk Drive for Apple \$289.95

Modems

SIGNALMAN - Anchor

Direct-connect automatic answer/originate selection, 300 Baud full duplex, Bell 103, includes RS-232 cable

IOM-5600A Signalman \$89.95

SMARTMODEM - Hayes

Sophisticated direct-connect auto-answer/auto-dial modem, touch-tone or pulse dialing, RS-232C interface, programmable

IOM-5400A Smartmodem \$224.95

IOM-1500A Hayes Chronograph \$218.95

IOM-2010A Micromodem II \$328.95

IOM-2012A Terminal program for MMII \$89.95

IOM-1100A Micromodem 100 \$368.95

APPLE-CAT - Novation

Software selectable 1200 or 300 Baud, direct connect, auto-answer/auto-dial, touch & pulse dialing, auxiliary 3-wire RS-232C serial port for printer

IOM-5232A Save \$50.00 \$324.95

1200 BAUD SMARTMODEM - Hayes

1200 and 300 baud, all the features of the standard Smartmodem plus 1200 baud, 212 compatible, full or half duplex.

IOM-5500A Smartmodem 1200 \$599.95

1200 BAUD AUTO CAT - Novation

212 Auto Cat, 1200 & 300 baud, auto dial/answer/disconnect, LED readout displays mode, analog/digital loop-back self tests, usable with multi-line phones.

IOM-5231A 212 Auto Cat \$649.95

Video Monitors

HI-RES 12" GREEN - Zenith

15 MHz bandwidth 700 lines/inch, F31 green phosphor, switchable 40 or 80 columns, small, light-weight & portable.

VDM-201201 List price \$189.95 \$129.95

12" GREEN SCREEN - NEC

20 MHz bandwidth, P31 phosphor ultra-high resolution video monitor with audio.

VDM-651200 Deluxe model \$199.95

VDM-651260 Economy model \$149.95

12" COLOR MONITOR - NEC

High resolution color monitor with audio.

VDC-651212 Color monitor \$389.95

NEC-1202D RGB color monitor \$999.95

13" COLOR MONITORS - BMC

18 MHz RGB & composite video color monitors.

VDC-421320 13" RGB Color \$369.95

VDC-421310 13" Composite video \$329.95

VDX-420090 RGB card for Apple \$149.95

COLOR MONITORS - Amdek

Reasonably priced color video monitors.

VDC-80130 13" Color I \$379.95

VDC-801320 13" Color II \$894.95

IOV-2300A DVM board for Apple \$199.95

AMBER or GREEN MONITORS - Jade

High resolution 18 MHz compact video monitors.

VDM-751210 12" Amber phosphor \$149.95

VDM-751220 12" Green phosphor \$139.95

VDM-750910 9" Amber phosphor \$149.95

VDM-750920 9" Green phosphor \$139.95

EPROM Erasers

ULTRA-VIOLET EPROM ERASERS

Inexpensive erasers for industry or home.

XME-3100A Spectronics w/o timer \$69.50

XME-3101A Spectronics with timer \$94.50

XME-3200A Economy model \$39.95

Single User System

THREE BOARD SET - SD Systems

4 MHz Z-80A CPU, 64K RAM (optional 256K), serial I/O port, parallel I/O port, double density disk controller, CP/M 2.2 & manual set, system monitor, control & diagnostic software. Includes SBC-200, 64K ExpandoRAM II, Versafloppy II, & CP/M 2.2 - all boards are assembled & tested.

Board set with 64K of RAM \$1095.00

Board set with 256K of RAM \$1295.00

Apple II Accessories

APPLE DISK DRIVE - Fourth Dimension

Totally Apple compatible, 143,360 bytes per drive on DOS 3.3, half-track capability - reads all Apple software, plugs right in to Apple controller as second drive, DOS 3.3, 3.2.1, Pascal, & CP/M compatible.

MSM-123200 40 Track add on Apple drive \$289.95

MSM-123200 Controller with free DOS 3.3 \$99.95

16K RAM CARD - for Apple II

Expand your Apple II to 64K, use as language card, full 1 year warranty. Why spend \$175.00?

MEX-16700A Save over \$100.00 \$69.95

Z-80 CPU CARD - for Apple II

Two computers in one, Z-80 & 6502, more than doubles the power and potential of your Apple, includes Z-80 CPU card CP/M and complete manual set.

CPX-62800A A & T with software \$249.95

APPLE-CAT - Novation

Software selectable 1200 or 300 baud, direct connect, auto-answer/auto-dial, auxiliary 3-wire RS232C serial port for printer.

IOM-5232A Save \$50.00!!! \$325.95

8" DISK CONTROLLER - Vista

New from Vista Computer, single or double sided, single or double density, compatible with DOS 3.2/3.3, Pascal, & CP/M 2.2, Shugart & Qume compatible

IOD-2700A A & T \$499.95

2 MEGABYTES for Apple II

Complete package includes: Two 8" double-density disk drives, Vista double-density 8" disk controller, cabinet, power supply, & cables, DOS 3.2/3.3, CP/M 2.2, & Pascal compatible.

1 MegaByte Package Kit \$1495.00

1 MegaByte Package A & T \$1695.00

2 MegaByte Package Kit \$1795.00

2 MegaByte Package A & T \$1995.95

VISION 80 - Vista Computer

80 column x 24 line video card for Apple II, 128 ASCII characters, upper and lower case, 9 x 10 dot matrix with 3 dot descenders, standard data media terminal control codes, CP/M Pascal & Fortran compatible, 50/60 Hz

IOV-2400A Vista Vision 80 \$299.95

CPS MULTICARD - Mtn. Computer

Three cards in one! Real time clock/calendar, serial interface, & parallel interface - all on one card.

IOX-2300A A & T \$179.95

HI-RES GRAPHICS CARD - Genie

Intelligent printer interface and control card allows full high resolution graphics and screen dumps.

IOP-2405A Genie for Epson \$119.95

IOP-2410A Genie for Okidata \$119.95

IOP-2415A Genie for NEC/C. Itoh \$119.95

Power Strips

ISOBAR - GSC

Isolates & protects your valuable equipment from high voltage spikes & AC line noise, inductive isolated ground, 15 amp circuit breaker, U.L. listed

EME-115103 3 socket \$39.50

EME-115105 4 socket \$49.50

EME-115100 8 socket \$54.50

EME-115110 9 socket rackmount \$74.50

Single Board Computer

SUPERQUAD - Adv. Micro Digital

Single board, standard size S-100 computer system, 4 MHz Z-80A, single or double density disk controller for 5 1/4" or 8" drives, 64K RAM, extended addressing, up to 4K of EPROM, 2 serial & 2 parallel I/O ports, real time interrupt clock, CP/M compatible.

CPC-30800A A & T \$724.95

IOX-4232A Serial I/O adapter \$29.95

Z-80 STARTER KIT - SD Systems

Complete Z-80 microcomputer with RAM, ROM, I/O, keyboard, display, kludge area, manual, & workbook.

CPS-30100K Kit with workbook \$299.95

CPS-30100A A & T with workbook \$469.95

AIM-65 - Rockwell International

Complete 6502 microcomputer with alphanumeric display, printer, keyboard, & instruction manual.

CPK-50165A 1K AIM-65 \$424.95

CPK-50465A 4K AIM-65 \$474.95

SFK-74600008E 8K Basic ROM \$64.95

SFK-64600004E 4K assembler ROM \$43.95

SFK-74600020E PL/65 ROM \$84.95

SFK-74600010E Forth ROM \$64.95

SFK-74600030E Instant Pascal \$99.95

PSX-030A Power supply \$64.95

ENX-000002 Enclosure \$54.95

SPECIAL PACKAGE

4K AIM-65, 8K Basic, power supply, & enclosure

Special Package Price \$649.95

S-100 EPROM Boards

PROM-100 - SD Systems

2708, 2716, 2732 EPROM programmer with software.

MEM-99520K Kit with software \$189.95

MEM-99520A A & T with software \$249.95

PB-1 - SSM Microcomputer

2708, 2716 EPROM board with on-board programmer.

MEM-99510K Kit with manual \$154.95

MEM-99510A A & T with manual \$219.95

EPROM BOARD - Jade

16K or 32K uses 2708 or 2716 EPROMs, 1K boundary.

MEM-16230K Kit w/o EPROMs \$79.95

MEM-16230A A & T w/o EPROMs \$119.95

S-100 Video Boards

SPECTRUM COLOR - CompuPro

Full-function color graphics board, up to 8 colors, 256 x 192 graphics, parallel I/O port, 8K RAM.

IOV-1870A A & T \$348.95

IOV-1870C CSC \$398.95

MICROANGELO - Scion

Ultra-high-resolution 512 x 480, 256 color or black & white S-100 video board

IOV-1500A A & T \$799.95

S-100 MotherBoards

ISO-BUS - Jade

Silent, simple, and on sale - a better motherboard

6 Slot (5 1/4" x 8 1/2")

MBS-061B Bare board \$22.95

MBS-061K Kit \$39.95

MBS-061A A & T \$69.95

12 Slot (9 1/4" x 8 1/2")

MBS-121B Bare board \$34.95

MBS-121K Kit \$69.95

MBS-121A A & T \$109.95

18 Slot (14 1/2" x 8 1/2")

MBS-181B Bare board \$54.95

MBS-181K Kit \$99.95

MBS-181A A & T \$149.95

ACTIVE TERMINATOR - CompuPro

A true mother's helper.

TSX-100A A & T \$59.45

Prices may be slightly higher at our retail locations. Please call the store nearest you for local price and availability.

8" Double-Density Disk Drive \$249

Save \$500.00 Dual 8" Disk Drive Sub-System Kit - \$695.00 Assembled & Tested - \$795.00

Printers on Sale

NEW EPSONs with GRAFTRAX-plus

MX-80FT with GRAFTRAX-plus same as MX-80 with friction feed and pin feed.

PRM-28082 MX-80FT w/GRAFTRAX-plus \$539.95

MX-100 with GRAFTRAX-plus 132/232 column, correspondence quality, up to 15" paper, friction feed & adjustable pin feed, 18 x 18 dot matrix, 80 CPS.

PRM-28100 MX-100 w/GRAFTRAX-plus \$729.95

PRA-27083 MX-80 ribbon cart. \$13.95
PRA-27101 MX-100 ribbon only \$9.95

BETTER THAN EPSON ! - Okidata

Microline 82A 80/132 column, 120 CPS, 9 x 9 dot matrix, friction feed, pin feed, adjustable tractor feed (optional), handles 4 part forms up to 9.5" wide, rear & bottom feed, paper tear bar, 100% duty cycle/200,000,000 character print head, bi-directional/logic seeking, both serial & parallel interfaces included, front panel switch & program control of 10 different form lengths, uses inexpensive spool type ribbons, double width & condensed characters, true lower case descenders & graphics

PRM-43082 Friction & pin feed \$479.95

Microline 83A 132/232 column, 120 CPS, forms up to 15" wide, removable tractor, plus all the features of the 82A.

PRM-43083 with FREE tractor \$699.95

Microline 84 132/232 column, Hi-speed 200 CPS, full dot graphics built in, plus all the features of the 83A.

PRM-43084 Centronics parallel \$1099.95

PRM-43085 Serial with 2K buffer \$1149.95

PRA-27081 Apple card \$39.95
PRA-27082 Apple cable \$19.95
PRA-27087 TRS-80 cable \$24.95
PRA-43081 2K hi speed serial card \$99.95
PRA-43082 Hi-res graphics ROMs 82A \$49.95
PRA-43083 Hi-graphics ROMs 83A \$49.95
PRA-43088 Tractor option for 82A \$49.95
PRA-43080 Extra ribbons pkg. of 2 \$9.95

8023 DOT MATRIX - NEC

100 CPS, proportional spacing, hi-resolution graphics, correspondence quality printing, bi-directional tractor & friction feed.

NEC-8023A 8023 parallel \$499.95

NEC-8023-01 8023 ribbon \$11.95

TP-1 LETTER QUALITY - SCM

12 CPS daisy wheel printer from Smith Corona.

PRD-45101 Centronics parallel \$648.95

PRD-45102 RS-232C serial \$648.95

LETTER QUALITY PRINTER - Jade

Uses standard daisy wheels and ribbon cartridges, 16 CPS bi-directional printing, semi-automatic paper loader (single sheet or fan fold), 10/12/15 pitch, up to 16" paper, built-in noise suppression cover.

PRD-11001 Centronics parallel \$899.95

PRD-11002 RS-232C serial model \$969.95

PRA-11000 Tractor Option \$169.95

KSR DAISY WHEEL - Anderson-Jacobson

Letter quality communications terminal/printer with full typewriter keyboard, 30 CPS Diablo print mechanism, RS-232 interface, includes free printer stand with deluxe casters, print wheel, ribbon, friction feed standard (tractor feed optional), factory refurbished with 30 day warranty, shipped freight collect.

PRD-99100 AJ KSR printer \$995.00

PRA-99200 Tractor option \$150.00

PRINTER PALS - F.M.J. Inc.

Desk top printer stand and continuous form paper holder.

PRA-99080 for MX-80, MX-80FT, OKI 82A, NEC \$29.95

PRA-99100 for MX-100, OKI 83A & 84 \$34.95

IBM PC Accessories

512K PC/RAM STACK - Hammond

A high quality, high density memory expansion board for your PC, cool-quiet-reliable operation, full parity checking, unique stacking sockets, expandable from 256K to 512K, MDRIVE high speed RAMdisk software only \$25.00 with 256K or 512K board purchase.

MEX-25600A 256K assembled & tested \$795.00

MEX-51200A 512K assembled & tested \$999.95

MEX-25600S MDRIVE disk emulator \$25.00

256K PC/RAM - Hammond Engineering

* User expandable from 64K to 256K, same high quality standards as the RAM Stack above, designed for medium memory expansion requirements.

* MEX-64000A 64K assembled & tested \$299.95

MEX-128000A 128K assembled & tested \$399.95

MEX-192000A 192K assembled & tested \$499.95

MEX-256000A 256K assembled & tested \$569.95

PC/SASI RAM - Hammond Engineering

Three boards in one, 256K of RAM, RS-232 asynchronous serial interface, and a SASI (Shugart Assoc Standard Interface) hard disk interface.

IOX-6000A PC/SASI RAM \$1095.00

PC EXTENDER CARD - Computel

High quality extender card with free connectors for IBM PC bus.

TSX-300A A & T with connectors \$42.95

WIRE WRAP BOARD - Computel

Highest quality, extremely versatile proto typing board with gold plated card edge for IBM PC.

TSX-310A Proto board \$59.95

Jade Bus Probe

THE BUS PROBE - Jade

Inexpensive S-100 Diagnostic Analyzer

So your computer is down. And you don't have an oscilloscope. And you don't have a front panel... You're not alone - most computers have their occasional bad days. But without diagnostic equipment such as an oscilloscope (expensive!) or a front panel (expensive!), it can be very difficult to pinpoint the problem. Even if you have an extender board with a superfast logic probe, you can't see more than one signal at a time. You're stuck, right?

Not anymore: Jade is proud to offer our cost-effective solution to the problems mentioned above: **THE BUS PROBE**.

Whether you're a hobbyist with a cantankerous kluge or a field technician with an anxious computer owner breathing down your neck, you'll find THE BUS PROBE speeds your repair time remarkably. Just plug in THE BUS PROBE and you'll be able to see all the IEEE S-100 signals in action. THE BUS PROBE allows you to see inputs, outputs, memory reads and writes, instruction fetches, DMA channels, vectored interrupts, 8 or 16 bit wide data transfers, plus the three bus supply voltages.

An on-board pulse generator can provide repetitive resets, interrupts, or wait states, for trouble shooting.

TSX-200B Bare board \$59.95

TSX-200K Kit \$119.95

TSX-200A A&T \$149.95

LARGE SELECTION OF LS TTL AVAILABLE.
PURCHASE \$50.00 WORTH OF LS TTL AND GET 10% CREDIT TOWARD ADDITIONAL PURCHASES. PREPAID ORDERS ONLY.

VISA or MASTERCHARGE: Send account number, interbank number, expiration date and sign your order. Approx. postage will be added. Orders with check or money order will be sent post paid in U.S. If you are not a regular customer, please use charge, cashier's check or postal money order. Otherwise there will be a two-week delay for checks to clear. Calif. residents add 6.5% tax. Money back 30-day guarantee. We cannot accept returned IC's that have been soldered to. Prices subject to change without notice. \$20 minimum order. \$2.00 service charge on orders less than \$20.00.

FOR ONLY \$129.95 Learn Computing From The Ground Up

Build a Computer kit that grows with you, and can expand to 64k RAM, Microsoft BASIC, Text Editor/Assembler, Word Processor, Floppy Disks and more.

EXPLORER/85

Here's the low cost way to learn the fundamentals of computing, the all-important basics you'll need more and more as you advance in computer skills. For just \$129.95 you get the advanced-design Explorer/85 motherboard, with all the features you need to learn how to write and use programs. And it can grow into a system that is a match for any personal computer on the market. Look at these features: 8085 Central Processing Unit, the microprocessor "heart" of the Explorer/85. (Join the millions who will buy and use the 8080/8085 this year alone!) ... Four 8-bit plus one 6-bit input/output ports from which you can input and output your programs, as well as control exterior switches, relays, lights, etc. ... a cassette interface that lets you store and reload programs you've learned to write ... deluxe 2,000 byte operating system/monitor makes it easy to learn computing in several important ways ... It allows simpler, faster writing and entering of programs ... It permits access by you to all parts of the system so you can check on the status of any point in the program ... It allows tracing each program step by step, with provision for displaying all the contents of the CPU (registers, flags, etc.) ... and it does much more.

You get all this in the starting level (Level A) of the Explorer/85 for only \$129.95. Incredible! To use, just plug in your 8VDC power supply and terminal or keyboard/display — if you don't have them, see our special offers below.

Level A computer kit (Terminal Version) ... \$129.95 plus \$3 P&I.*
Level A kit (Hex Keypad/Display Version) ... \$129.95 plus \$3 P&I.*

Level B — This "building block" converts the motherboard into a two-slot S100 bus (industry standard) computer. Now you can plug in any of the hundreds of S100 cards available.
Level B kit ... \$49.95 plus \$2 P&I.*
S100 bus connectors (two required) ... \$4.85 each, postpaid.

Level C — Add still more computing power; this "building block" mounts directly on the motherboard and expands the S100 bus to six slots.
Level C kit ... \$39.95 plus \$2 P&I.*
S100 bus connectors (five required) ... \$4.85 each, postpaid.

Level D — When you reach the point in learning that requires more memory, we offer two choices: either add 4k of a memory directly on the motherboard, or add 16k to 64k of memory by means of a single S100 card, our famous "JAWS".

Level D kit (CHECK ONE) ... 4k on-board ... \$49.95 plus \$2 P&I.* ... 16k S100 bus ... \$149.95 plus \$2 P&I.* ... 32k S100 "JAWS" ... \$199.95 plus \$2 P&I.* ... 48k S100 "JAWS" ... \$249.95 plus \$2 P&I.* ... 64k S100 "JAWS" ... \$299.95 plus \$2 P&I.*

Level E — An important "building block" it activates the 8k ROM/EPROM space on the motherboard. Now just plug in our 8k Microsoft BASIC or your own custom programs.
Level E kit ... \$5.95 plus \$2 P&I.*

Microsoft BASIC — It's the language that allows you to talk English to your computer! It is available three ways: 8k cassette version of Microsoft BASIC (requires Level B and 12k of RAM minimum; we suggest a 16k S100 "JAWS" — see above) ... \$99.95 plus \$2 P&I.*

8k ROM version of Microsoft BASIC (requires Level B & Level E and 4k RAM; just plug into your Level E sockets. We suggest either the 4k Level D RAM expansion or a 16k S100 "JAWS") ... \$99.95 plus \$2 P&I.*

Disk version of Microsoft BASIC (requires Level B, 32k of RAM, floppy disk controller, 8" floppy disk drive) ... \$329.95 plus \$2 P&I.*

TEXT EDITOR/ASSEMBLER — The editor/assembler is a software tool (a program) designed to simplify the task of writing programs. As your programs become longer and more complex, the assembler can save you many hours of programming time. This software includes an editor program that enters the programs you write, makes changes, and saves the programs on cassettes. The assembler performs the clerical task of translating symbolic code into the computer-readable object code. The editor/assembler program is available either in cassette or a ROM version.

Editor/Assembler (Cassette version; requires Level B and 8k (min.) of RAM — we suggest 16k "JAWS" — see above) ... \$99.95 plus \$2 P&I.*

Editor/Assembler (ROM version; supplied on an S100 card; requires Level B and 4k RAM (min.) — we suggest either Level D or 16k "JAWS") ... \$99.95 plus \$2 P&I.*

8" FLOPPY DISK — A remarkable "building block" Add our 8" floppy disk when you need faster operation: more convenient program storage, perhaps a business application, and access to the literally thousands of programs and program languages available today. You simply plug them into your Explorer/85 disk system — it accepts all IBM-formatted CP/M programs.

8" Floppy Disk Drive ... \$499.95 plus \$12 P&I.*
Floppy Controller Card ... \$199.95 plus \$2 P&I.*
Disk Drive Cabinet & Power Supply ... \$69.95 plus \$3 P&I.*
Drive Cables (set up for two drives) ... \$25.00 plus \$1.50 P&I.*
CP/M 2.2 Disk Operating System; includes Text Editor/Assembler, dynamic debugger, and other features that give your Explorer/85 access to thousands of existing CP/M-based programs ... \$150.00 postpaid.

NEED A POWER SUPPLY? Consider our AP-1. It can supply all the power you need for a fully expanded Explorer/85 (note: disk drives have their own power supply). Plus the AP-1 fits neatly into the attractive Explorer steel cabinet (see below).
AP-1 Power Supply kit (8V @ 5 amps) in deluxe steel cabinet ... \$39.95 plus \$2 P&I.*

NEED A TERMINAL? We offer you choices: the least expensive one is our Hex Keypad/Display kit that displays the information on a calculator-type screen. The other choice is our ASCII Keyboard/Computer Terminal kit, that can be used with either

1. Plug in Level E here; un-captions Microsoft BASIC or Editor/Assembler in ROM
2. Add Level B to convert to S100
3. Add 4k RAM
4. Plug in Level E here; un-captions Microsoft BASIC or Editor/Assembler in ROM
5. Add two S100 boards
6. Add your own custom circuit (prototyping area)
7. Connect terminal

a CRT monitor or a TV set (if you have an RF modulator).
Hex Keypad/Display kit ... \$69.95 plus \$2 P&I.*

FASTERM-64 TERMINAL KIT — Featuring a 56 key ASCII Keyboard, 128 character set upper and lower case, 75 ohm output, 8 baud rates: 150 to 19200 (switch selectable), RS232C or 20 MA output, 32 or 64 character by 16 line formats, complete with Deluxe Steel Cabinet and Power Supply ... \$199.95 plus \$3 P&I.*

RF Modulator kit (allows you to use your TV set as a monitor) ... \$4.95 postpaid
12" Video Monitor (10MHz bandwidth) ... \$139.95 plus \$5 P&I.*
Deluxe Steel Cabinet for the Explorer/85 ... \$49.95 plus \$3 P&I.*
Fan for cabinet ... \$15.00 plus \$1.50 P&I.*

ORDER A SPECIAL-PRICE EXPLORER/85 PAK — THERE'S ONE FOR EVERY NEED.

Beginner Pak (Save \$26.00) — You get Level A (Terminal Version) with Monitor Source Listing (\$25 value) AP-1, 5-amp. power supply, Intel 8085 Users Manual ... (Reg. \$199.95) SPECIAL \$169.95 plus \$4 P&I.*

ANNOUNCING TWO NEW TERMINALS

Smart • Fast • Graphics • Matching Modem and \$295 Printer

Netronics announces a state of the art breakthrough in terminals, now at prices you can afford, you can go on-line with data-bank and computer phone-line services. It's all yours: "electronic newspapers," educational services, Dow-Jones stock reports, games, recipes, personal computing with any level language, program exchanges, electronic bulletin boards ... and more every day!!!

Netronics offers two new terminals, both feature a full 56 key/128 character typewriter-style keyboard, baud rates to 19.2 kilobaud, a rugged steel cabinet and power supply. The simplest one, FASTERM-64, is a 16 line by 64 or 32 character per line unit, with a serial printer port for making hard copy of all incoming data, and optional provisions for block and special character graphics. The "smart" version, SMARTERM-80, features either 24 line by 80 characters per line or 16 by 40 characters per line, it offers on-screen editing with page-at-a-time printing, 12,000 pixel graphics, line graphics, absolute cursor addressing, underlining, reverse video, one-half intensity and much more ... simply plug them into your computer or our phone modem and be on-line instantly. Use your TV set (RF modulator required) or our deluxe green-phosphor monitor pictured above. For hard copy just add our matched printer.

Price breakthrough!!! Own the FASTERM-64, a complete terminal kit, ready to plug in for just \$199.95 or order the SMARTERM-80 kit for just \$299.95, (both available wired and tested.) Be on-line with the million-dollar computers and data services today ... we even supply the necessary subscription forms.

More good news: All the components in our terminals are available separately (see coupon), so you buy only what you need!!!

FASTERM-64 ... DISPLAY FORMAT: 64 or 32 characters/line by 16 lines ... 96 displayable ASCII characters (upper & lower case) ... 8 baud rates: 150, 300, 600, 1200, 2400, 4800, 9600, 19,200 (switch sel.) ... LINE OUTPUT: RS232C or 20 ma current loop ... VIDEO OUTPUT: 1V P/P (EIA RS-170) ... CURSOR MODES: home & clear screen, erase to end of line, erase cursor line, cursor up & down, auto carriage return/line feed at end of line & auto scrolling ... REVERSE VIDEO ... BLINKING CURSOR ... PARITY: off, even or odd ... STOP BITS: 1, 1.5, 2 ... DATA BITS PER CHARACTER: 5, 6, 7 or 8 ... CHARACTER OUTPUT: 5 by 7 dot matrix in a 7 by 12 cell ... PRINTER OUTPUT: prints all incoming data ... 1K ON BOARD RAM ... 2K ON BOARD ROM ... CRYSTAL CONTROLLED ... COMPLETE WITH POWER SUPPLY ... OPTIONAL GRAPHICS MODE includes 34 Greek & math characters plus 30 special graphics characters ... ASCII ENCODED KEYBOARD: 56 key/128 characters.

SMARTERM-80 ... DISPLAY FORMAT: 80 characters by 24 lines or 40 characters by 16 lines 128 displayable ASCII characters (upper & lower case) 8 baud rates: 110, 300, 600, 1200, 2400, 4800, 9600, 19,200 ... LINE OUTPUT: RS232C or 20 ma current loop ... VIDEO OUTPUT: 1V P/P (EIA RS-170) ... EDITING FEATURES: insert/delete line, insert/delete character, forward/back tab ... LINE OR PAGE TRANSMIT ... PAGE PRINT FUNCTION ... CURSOR POSITIONING: up, down, right, left, plus absolute cursor positioning with read back ... VISUAL ATTRIBUTES: underline, blink, reverse video, half intensity, & blank ... GRAPHICS: 12,000 pixel resolution block plus line graphics ... ON-SCREEN PARITY INDICATOR ... PARITY: off, even or odd ... STOP BITS: 110 baud 2, all others 1 ... CHAR. OUTPUT: 7 by 11 character in a 9 by 12 block ... PRINTER OUTPUT ... 60 OR 50 Hz VERTICAL REFRESH ... BLINKING BLOCK CURSOR ... CRYSTAL CONTROLLED ... 2K ON BOARD RAM ... ASCII ENCODED KEYBOARD: 56 key/128 character ... 4K ON BOARD ROM ... COMPLETE WITH POWER SUPPLY

TELEPHONE MODEM 103 O/A ... FULL DUPLEX, FCC APPROVED ... DATA RATE: 300 baud ... INTERFACE: RS232C and TTY ... CONTROLS: talk/data switch (no need to connect and disconnect phone), originate/answer switch on rear panel ... NO POWER SUPPLY REQUIRED.

ASCII KEYBOARD ASCII-3 ... 56 key/128 character ASCII ENCODED ... UPPER & LOWER CASE ... FULLY DEBOUNCED ... 2 KEY ROLLOVER ... POS OR NEG LOGIC WITH POS STROBE ... REQUIRE +5 & -12V DC (SUPPLIED FROM VIDEO BOARDS) ... PRINTER COMET I ... SERIAL I/O TO 9600 BAUD ... 80 CHARACTER COLUMN (132 COMPRESSED) ... 10" TRACTOR FEED ... UPPER/LOWER CASE ... INDUSTRY STANDARD RIBBONS ... 4 CHARACTER SIZES ... 9 BY 7 DOT MATRIX ... BI-DIRECTIONAL PRINTING

Sales Opportunity

A few select territories available

Join a fast growing company involved in the microcomputer industry as a direct salesman. Sales involve our wide selection of books, four publications and software. We are looking for a non-smoking individual with a good sales background and a basic understanding of microcomputers. An excellent career awaits the person who wants to be "on his own." It will be the responsibility of our direct salesman to become familiar with all makes of computers and their sales outlets, amateur radio and electronic stores, book stores, and other outlets for our products in your given territory. We will also add other lines as they become available. Arrangements are being made to coordinate efforts with some other firms in the

area, including a major printer manufacturer. We offer an excellent growth potential with a highly motivated, young corporation. If you or someone you know is interested in the opportunities available at Wayne Green Inc., please submit your background in detail, including sales experience, recent work history, knowledge of the microcomputing industry, educational background and references to:

Sales Manager
Wayne Green, Inc.
Peterborough, NH 03458

All replies will be immediately acknowledged and held in the strictest of confidence.

WAYNE GREEN, INC.
(M-11) Pine Street
Peterborough, N.H. 03458

is HARD COPY STORAGE a problem?

MICROCOMPUTING, as thick as it is, is more like a floppy when it comes to standing on the bookshelf. Try the *MICROCOMPUTING* Library Shelf Boxes... sturdy corrugated white dirt-resistant cardboard boxes which will keep them from flopping around. We have self-sticking labels for the boxes, too, not only for *MICROCOMPUTING*, but also for *73 Magazine*, *80 MICRO*... and for *CQ*, *QST*, *Ham Radio*, *Personal Computing*, *Radio Electronics*, *Interface Age*, and *Byte*. Ask for whatever stickers you want with your box order. They hold a full year of *MICROCOMPUTING*, *80 MICRO*... or *73 Magazine*. Your magazine library is your prime reference; keep it handy and keep it neat with these strong library shelf boxes. One box (BX-1000) is \$2.00, 2-7 boxes (BX-1001) are \$1.50 each, and eight or more boxes (BX-1002) are \$1.25 each. Be sure to specify which labels we should send. Have your credit card handy and call our toll-free order number 800-258-5473, or use the order card in the back of the magazine and mail to:

SPECIAL SALE

HAZELTINE 2000

12" green phos tube
adjustable baud rate from front
remote keyboard w/numeric keypad
insert & delete, character & line mode,
and cursor control functions
external printer & cassette ports
modem cable w/DB-25 connector
shipping wt. 65lbs.
\$200 f.o.b. our warehouse

MONITORS

12" black & white monitor. Wide band, will
display 80 x 24 char. 10K or 75Ω input im-
pedance, composite video input. Transform-
er power supply.
Shpt. Wt. 30#
Price: \$55 ea.
Used with all computers such as: TRS-80,
Apple, and many others.
Complete manual \$5.00.
(Also in green phos \$80.00 ea.)

THERMAL PRINTERS

- * parallel interface
- * excellent condition
- * shipping wt. 30lbs.
- * \$90.00 f.o.b. our warehouse

PERKIN-ELMER CAROUSEL 350 TERMINAL

Only Selectronics could bring you this unbelievable opportu-
nity to own the finest high quality KSR terminal ever made.
These machines originally listed for more than \$4200. Check
these outstanding features:

- * Letter quality printing with upper and lowercase
- * Microprocessor controlled
- * 76-key alphanumeric keyboard with 10-key numeric pad
- * EIA RS232C asynchronous serial interface
- * 40 cps print rate
- * 132 character buffer
- * Full or half duplex
- * Parity—odd, even, none
- * Replacable print cups and elements

Excellent Condition— \$650.00 f.o.b.
Shpt. Wt. 100# our warehouse

Centronics 101A

- * 5 x 7 dot matrix
- * 164 C.P.S.
- * centronics parallel interface
- * adjustable tractor feed to 15" paper
- * stands available (\$25.00 f.o.b. our warehouse)
- * serial interface available soon
- * shipping wt. 110 lbs.
- * \$225.00 f.o.b. our warehouse

Centronics 101A

ADDS 580

- * 24 lines x 80 chrs.
- * EIA and current loop interface
- * 5 trans. speed to 9600 baud
- * auto line feed selection
- * roll mode selection
- * cursor control and addressing
- * serial EIA printer interface
- * shipping wt. 65 lbs.
- * \$250.00 f.o.b. our warehouse

ADDS 580

Beehive 100 & 150 series

MULTIPLE VOLTAGE COMPUTER GRADE NORTH POWER SUPPLY

+ 5VDC @ 25A + 12VDC @ 3A
- 5VDC @ 4A - 12VDC @ 2A
shipping wt. 30lbs.
\$35.00 f.o.b. our warehouse

Beehive 100 & 150 series

- * 24 lines x 80 chrs.
- * total page memory 1920 chrs.
- * 5 x 7 dot matrix
- * 95 displayable chrs.
- * numeric pads
- * trans. rates to 19,200 bps
- * addressable cursor & cursor control cluster
- * low power schottky tech.
- * upper level features include:
 - * block send
 - * blinking
 - * aux. send
 - * editing
 - * formatting
 - * 16 special function keys
- * shipping wt. 65 lbs.
- * \$250.00 f.o.b. our warehouse

JE600 Hexadecimal Encoder Kit

FULL 8-BIT LATCHED OUTPUT 19-KEY KEYBOARD

The JE600 Encoder Keyboard Kit provides two separate hexadecimal digits produced from sequential key entries to allow direct programming for 8-bit microprocessor or 8-bit memory circuits. Three additional keys are provided for user operations with one having a bistable output available. The outputs are latched and monitored with 9 LED readouts. Only +5VDC required for operation. Size: 3 1/2" H x 8 1/4" W x 8 3/4" D. (After assembled as pictured above) ... \$99.95

JE600 Kit 19-Key Hexadec. Keyboard, PC Board & Cmpnts. (no case) ... \$59.95

K19 19-Key Keyboard (Keyboard only) ... \$14.95

DTE-HK (case only - 3 1/2" H x 8 1/4" W x 8 3/4" D) \$44.95

JE610 ASCII Encoded Keyboard Kit

The JE610 ASCII Keyboard Kit can be interfaced into most any computer system. The kit comes complete with an industrial grade keyboard switch assembly (62-keys), IC's, sockets, connector, electronic components and a double-sided printed wiring board. The keyboard assembly requires +5V @ 150mA and -12V @ 10 mA for operation. Features: 60 keys generate the 126 characters, upper and lower case ASCII set. Fully buffered. Two user-definable keys provided for custom applications. Caps lock for upper-case-only alpha characters. Utilizes a 2376 (40-pin) encoder read-only memory chip. Outputs directly compatible with TTL/DTL or MOS logic arrays. Easy interfacing with a 16-pin dip or 18-pin edge connector. Size: 3 1/2" H x 14 1/2" W x 8 3/4" D. (After assembled as pictured above) ... \$124.95

JE610 Kit 62-Key Keyboard, PC Board, & Components (no case) ... \$79.95

K62 62-Key Keyboard (Keyboard only) ... \$34.95

DTE-AK (case only - 3 1/2" H x 14 1/2" W x 8 3/4" D) \$49.95

JE212 - Negative 12VDC Adapter Board Kit for JE610 ASCII KEYBOARD KIT. Provides -12VDC from incoming 5VDC ... \$9.95

JE215 Adjustable Dual Power Supply

General Description: The JE215 is a Dual Power Supply with independent adjustable positive and negative output voltages. A separate adjustment for each of the supplies provides the user unlimited applications for IC current voltage requirements. The supply can also be used as a general all-purpose variable power supply.

FEATURES:

- Adjustable regulated power supplies, pos. and neg. 1.2VDC to 15VDC.
- Power Output (each supply): 5VDC @ 500mA, 10VDC @ 750mA, 12VDC @ 500mA, and 15VDC @ 175mA.
- Two, 3-terminal adj. IC regulators with thermal overload protection.
- Heat sink regulator cooling.
- LED "on" indicator.
- Printed Board Construction.
- 120VAC input.
- Size: 3 1/2" W x 5 1/16" L x 2 1/4" H

JE215 Adj. Dual Power Supply Kit (as shown) ... \$24.95

(Picture not shown but similar in construction to above)

JE200 Reg. Power Supply Kit (5VDC, 1 amp) ... \$14.95

JE205 Adapter Bld. (to JE200) ±5.0 & ±12V ... \$12.95

JE210 Var. Pwr. Sply. Kit, 5-15VDC, to 1.5amp. ... \$19.95

KEYBOARDS — POWER SUPPLIES

MICRO SWITCH 69-KEY KEYBOARD
Data Entry Keyboard, Encoded Output: 8-bit Parallel EBC DIC. Switching: Hall Effect, 24-pin Edge Card Connection. Comes with Pin Connector and Pin Enclosure.
Part No. KB69SD12-2 (Fits into DTE-20 Enclosure) ... \$19.95 each

DATANETICS 74-KEY KEYBOARD
ASCII Encoded Keyboard, Output: Even Parity ASCII. Supply voltage +5, -12 volt. Switching: Mechanical SPST - 50-pin Connection. Compatible with Pin Connector.
Part No. KB354 (Fits into DTE-20 Enclosure) ... \$29.95 each

MICRO SWITCH 85-KEY KEYBOARD
Word Processing Keyboard, 26 Pin Edge Card Connection. Supply Voltage +5VDC. Main Keyboard is QWERTY. Additional Key Pads for Cursor and word processing functions.
Part No. 88SD18-1 ... \$29.95 each

MICRO SWITCH 88-KEY KEYBOARD (PARALLEL)
Data Entry Keyboard used in a Diablo 1640 Terminal. Supply Voltage: +5V, -12V. Switching: Hall Effect - 10-pin Edge Card Connection. Schematic included. Uses 8048 Encoder Chip.
Part No. 88SD22 (Fits into DTE-20 Enclosure) ... \$69.95 each

POWER SUPPLY - 5VDC @ 1 AMP REGULATED
Transaction Tech
Output +5VDC @ 1 amp (also +30VDC) reg. input 115VAC 60Hz. Two-tone (black/beige) self-enclosed case. 8 ft. 3 cond. black power cord. Size: 6 1/2" W x 7 1/2" D x 2 1/4" H. Wt. 3 lbs.
Part No. PSS1194 ... \$19.95 each

POWER SUPPLY - 5VDC @ 1 AMP REGULATED
B Industries
Output +5VDC @ 1 amp, +36-42VDC adj. 400mA or less. 30VAC (isol.) @ 1.5 amp. Input 115VAC 60Hz. Circ. brkr. reset button. Bk. self-enc. case w/4 rubber feet. 6 H. 3 cond. blk. pow. cord. On/off switch. 6 1/2" W x 7 1/2" D x 3-7/8" H - wt. 7 lbs.
Part No. PS407D ... \$24.95 each

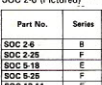

POWER SUPPLY - 5VDC @ 3 AMP REGULATED
Deltaron
Input: 115VAC, 74-400Hz. Output: 5VDC Adjustable @ 3 amp, 6VDC @ 2.5 amp. Adjustable current limit. Ripple & Noise: 1mV rms, 5mV p-p - 2 mounting surfaces. UL recognized. Size: 4" W x 4 1/2" L x 2-7/16" H - wt. 2 lbs.
Part No. QPS-1 ... \$29.95 each

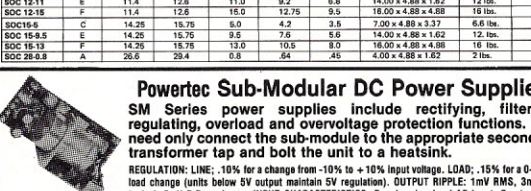

POWER SUPPLY - 5VDC @ 7.5 AMP, 12VDC @ 1.5 AMP SWITCHING
Input: 115VAC, 50-60Hz @ 3 amp/230VAC, 50Hz @ 1.5 amp. Fan vol./power supply select switch (115/230VAC). Output: 5VDC @ 7.5 amp, 12VDC @ 1.5 amp. 8 ft. blk. pow. cord. 11 1/2" L x 4-7/8" W x 3 1/2" H. Wt. 6 lbs.
Part No. PS94V0 ... \$49.95 each

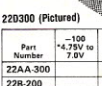

MULTI-VOLTAGE POWER SUPPLY - +5, +12, -12VDC REG.
Input: 105-125VAC, 50-60Hz @ 205-250VAC, 47-63Hz. Output: +5VDC @ 2 amp Adj., 5VDC @ 50mA Fixed, +12VDC @ 1 amp Adj., -12V @ 2 amp Adj. Overvoltage protection. Size: 12 1/2" L x 4-7/8" W x 3 1/2" H. Wt. 6 lbs.
Part No. RA0250 ... \$39.95 each

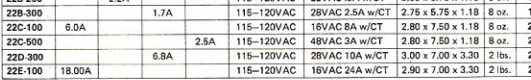

SORENSEN Regulated Power Supplies
Sorensen's open construction (SOC) power supplies are series-regulated solid-state systems, designed to provide reg. DC voltages at 6 levels (2-28 vlrage). These units are open-framed on sturdy black anodized aluminum for excellent mounting.

Part No.	Series	Output Voltage (VDC)	Output Current (Amps)	Size (Inches)	Weight	Price

- ★ COLOR MATCHES APPLE
- ★ FITS SHUGART

SPECIAL — \$29.95

MICROCOMPUTER HARDWARE HANDBOOK

FROM ELCOMP — \$14.95

Over 800 pages of manufacturers data sheets on most commonly used IC's.

Includes:

- ★ TTL — 74/74LS and 74F
- ★ CMOS
- ★ Voltage Regulators
- ★ Memory — RAM, ROM, EPROM
- ★ CPU's — 6800, 6500, Z80, 8080, 8085, 8086/8
- ★ MPU support & interface — 6800, 6500, Z80, 8200, etc.

WE NOW STOCK A COMPLETE LINE OF DISC, ELECTROLYTIC, MONOLITHIC AND TANTALUM CAPACITORS

RESISTORS

1/4 WATT 5% CARBON FILM ALL STANDARD VALUES FROM 1 OHM TO 10 MEG OHM
50 PCS. SAME VALUE .025 EA.
100 PCS. SAME VALUE .02 EA.
1000 PCS. SAME VALUE .015 EA.

PLEASE USE YOUR CUSTOMER NUMBER WHEN ORDERING

TERMS: For shipping include \$2 for UPS Ground or \$3 for UPS Blue Label Air. Items over 5 pounds require additional shipping charges. Foreign orders include sufficient amount for shipping. There is a \$10 minimum order. Bay Area and Los Angeles Counties add 6% Sales Tax. Other California residents add 6% Sales Tax. We reserve the right to substitute manufacturer. Not responsible for typographical errors. Prices are subject to change without notice. We will match or beat any competitor's price provided it is not below our cost.

THE ULTIMATE APPLE*

COOLING FAN \$69⁹⁵

- ★ Easy Installation
- ★ No modification of Apple required.
- ★ Color matches Apple.
- ★ Switch on front controls fan, computer and monitor.
- ★ Ultra-quiet, reliable fan.
- ★ Completely eliminates problems caused by overheating

16K RAM CARD

- ★ Upgrade your 48K Apple II to full 64K of RAM.
- ★ Fully software and hardware compatible with the Apple language card and microsoft Z80 card.
- ★ Eliminates the need for the Applesoft or Integer Basic ROM card when used in conjunction with DOS 3.3.
- ★ Allows you to run Apple Fortran or Pascal with no difficulty.
- ★ Available as bare board, kit, or assembled and tested board.

PRICE REDUCED

ASSEMBLED & TESTED \$49.95
BARE CARD \$14.95 KIT \$44.95

DISK DRIVE \$299⁹⁵

- ★ Includes metal cabinet
- ★ Color matches Apple
- ★ 35 Tracks/single side
- ★ Includes cable
- ★ Use with Apple II Controller

S-100 STARTER SYSTEM

We've bundled our most popular 3 board combination to form a complete S-100 System, just add mainframe, peripherals and cables!

KKPDBCCSSP1**CCS2810 4MHz Z80 CPU**

- 2/4 MHz CPU
- On board RS-232 Serial Port
- On board Monitor

\$695.00*

LIST PRICE: \$1125.00

CCS2422 DISK CONTROLLER **SAVE \$430.00!!**

(Shipping Weight 8 lbs.)

*With the purchase of two disk drives
\$750.00 if purchased separately!

CCS2065 64K 4MHz RAM

- 4116 Low power dynamic RAMs
- Supports DMA
- Bank Select up to 512K
- Fail Safe refresh circuitry

**ALL BOARDS ASSEMBLED & TESTED
PLUG & RUN!!**

**FREE CP/M 2.2**

CompuPro

SYSTEMS

The days of "Out of Memory" are gone at last! CompuPro has introduced the largest static S-100-IEEE/696 RAM board ever to be produced.

The RAM 21 is arranged either as a 128K x 8 bit wide or 64K x 16 bit wide board, using a high speed, ultra low power proprietary static RAM. CompuPro has also included 24 bit addressing for up to 16 megabyte capability and power consumption so low your mainframe will never know it's there.

- Meets or exceeds all IEEE 696/S-100 specifications
- Fully static design uses less power than dynamics (1.2 amps typical)
- 24 bit extended addressing
- 8 bit (128K) or 16 bit (64K) operation
- Addressable as one block
- 16K window deselect, dip switch selectable
- Switch selectable PHANTOM disable
- 12 MHz CPU operation
- 16K x 1 static RAM
- Thorough bypassing of all supply lines
- Capable of DMA processing
- 128K Static, 1.2 amps.

RAM 21 12 MHz 128K STATIC S-100 MEMORY

816**KKGBT190A**

LIST PRICE \$1695.00

SALE PRICE**\$995.00**
SAVE \$700.00!!

5Mb S-100 HARD DISK SUB-SYSTEM \$1595.00

5Mb S-100 HARD DISK BACK-UP \$1195.00

MORROW DESIGNS

Winchester speed, 5Mb capacity and reliability for only \$1495.00! The DISCUS M5 from Morrow Designs includes a 5Mb Seagate ST506 Winchester drive installed in a cabinet with cables and power supply, a DMA hard disk controller, CP/M* 2.2 operating system and Microsoft's BASIC programming language. Sounds too good to be true? There's more... a 5Mb add-on drive for additional storage or back-up is only \$1100.00. It's faster and more reliable than tape and costs less!

KEY FEATURES:

- Storage capacity of 6.38Mb unformatted, 5.0Mb formatted
- Band actuator and stepper motor head positioning
- 50 megabit/second transfer rate
- Same track capacity as a double density 8 inch floppy
- 170 millisecond random average access time, reducible to 95 ms via a simple software algorithm
- The only single S-100 DMA Hard disk controller board on the market today
- Fully compatible with high speed 6MHz and 8MHz CPUs of today and tomorrow
- DMA bus arbitration as outlined by the IEEE 696 standard
- Controls 1 to 4 soft sectored Winchester drives
- ST506 or SA 1000 interface compatible
- Variable sector length (256,512,1024, or >048 byte sectors)
- Automatic CRC generation and checking
- Addresses 1 to 16 heads
- Addresses an infinite number of tracks
- Contains its own on-board microprocessor — Signetics 8X300
- 24-bit address burst DMA transfers
- Channel driven for enhanced speed
- All disk driver routines resident on the controller
- Variable format
- No buffering required
- Maximum transfer rate 5,000,000 bits per second
- Due to this high transfer rate, a minimum CPU speed of 2.5MHz is required

The DMAHDC has been designed for expansion. One to four drives can be attached directly and controlled. One to sixteen drive heads may be addressed. Any number of tracks may be specified during the seek routine by specifying one to two hundred and fifty-six tracks one or more times. Each of the expansion abilities prepare the user to upgrade his system as technology advances to additional platters and tracks.

DISCUS M5 WITH DMA HARD DISK CONTROLLER

KKMDSMAM5 Software supplied on 8" IBM3740 disk with blank I/O and INSTALL program

KKMDSMAM52B Software configured for Morrow DJ/2B controller and Mult I/O as console

KKMDSMAM5DMA Software configured for Morrow DJ/DMA controller and Mult I/O as console

**KKMDSMAM55S**

Software supplied on 5 1/4" soft sector (IBM/Cromemco disk w/blank I/O and INSTALL program
KKMDSMAM5NS Software supplied on 5 1/4" 10 sector North Star disk with blank I/O and INSTALL program

32K S-100 EPROM CARD PRICE CUT!

\$59.95

USES 2716's
Blank PC Board - \$34
ASSEMBLED & TESTED
ADD \$30

SPECIAL: 2716 EPROM's (450 NS) Are \$4.95 Ea. With Above Kit.

KIT FEATURES:

1. Uses +5V only 2716 (2Kx8) EPROM's.
2. Allows up to 32K of software on line!
3. IEEE S-100 Compatible.
4. Addressable as two independent 16K blocks.
5. Cromemco extended or Northstar bank select.
6. On board wait state circuitry if needed.
7. Any or all EPROM locations can be disabled.
8. Double sided PC board, solder-masked, silk-screened.
9. Gold plated contact fingers.
10. Unselected EPROM's automatically powered down for low power.
11. Fully buffered and bypassed.
12. Easy and quick to assemble.

16K STATIC RAM KIT-S 100 BUSS

PRICE CUT!

\$119⁹⁵
KIT

FOR 4MHZ
ADD \$10

KIT FEATURES:

1. Addressable as four separate 4K Blocks.
2. ON BOARD BANK SELECT circuitry. (Cromemco Standard). Allows up to 512K on line!
3. Uses 2114 (450NS) 4K Static Rams.
4. ON BOARD SELECTABLE WAIT STATES.
5. Double sided PC Board, with solder mask and silk screened layout. Gold plated contact fingers.
6. All address and data lines fully buffered.
7. Kit includes ALL parts and sockets.
8. PHANTOM is jumpered to PIN 67.
9. LOW POWER: under 1.5 amps TYPICAL from the +8 Volt Buss.
10. Blank PC Board can be populated as any multiple of 4K.

STEREO! S-100 SOUND COMPUTER BOARD

NEW!

At last, an S-100 Board that unleashes the full power of two unbelievable General Instruments AY3-8910 NMOS computer sound IC's. Allows you under total computer control to generate an infinite number of special sound effects for games or any other program. Sounds can be called in BASIC, ASSEMBLY LANGUAGE, etc.

KIT FEATURES:

- * TWO GI SOUND COMPUTER IC'S.
- * FOUR PARALLEL I/O PORTS ON BOARD.
- * USES ON BOARD AUDIO AMPS OR YOUR STEREO.
- * ON BOARD PROTO TYPING AREA.
- * ALL SOCKETS, PARTS AND HARDWARE ARE INCLUDED.
- * PC BOARD IS SOLDERMASKED, SILK SCREENED, WITH GOLD CONTACTS.
- * EASY, QUICK, AND FUN TO BUILD. WITH FULL INSTRUCTIONS.
- * USES PROGRAMMED I/O FOR MAXIMUM SYSTEM FLEXIBILITY.

Both Basic and Assembly Language Programming examples are included.

SOFTWARE:

SCL™ is now available! Our Sound Command Language makes writing Sound Effects programs a SNAP! SCL™ also includes routines for Register-Examine-Modify, Memory-Examine-Modify, and Play-Memory. SCL™ is available on CP/M compatible diskette or 2708 or 2716. Diskette - \$24.95 2708 - \$19.95 2716 - \$29.95. Diskette includes the source. EPROM'S are ORG at E000H. (Diskette is 8 Inch Soft Sectored)

NEW! G.I. COMPUTER SOUND CHIP

AY3-8910. As featured in July, 1979 BYTE! A fantastically powerful Sound & Music Generator. Perfect for use with any 8 Bit Microprocessor. Contains: 3 Tone Channels, Noise Generator, 3 Channels of Amplitude Control. 16 bit Envelope Period Control, 2-8 Bit Parallel I/O. 3 D to A Converters, plus much more! All in one 40 Pin DIP. Super easy interface to the S-100 or other busses. \$9.95

SPECIAL OFFER: \$14.95 each Add \$3 for 60 page Data Manual.

NEW IEEE 696 S100
STANDARD
(AS PROPOSED)

FOR 56K KIT \$249
ASSEMBLED AND
TESTED ADD \$40

FEATURES:

- * Uses new 2K x 8 (TMM 2016 or HM 6116) RAMs.
- * Fully supports IEEE 696 24 BIT Extended Addressing.
- * 64K draws only approximately 500 MA.
- * 200 NS RAMs are standard. (TOSHIBA makes TMM 2016s as fast as 100 NS. FOR YOUR HIGH SPEED APPLICATIONS.)
- * SUPPORTS PHANTOM (BOTH LOWER 32K AND ENTIRE BOARD).
- * 2716 EPROMs may be installed in any of top 48K.
- * Any of the top 8K (E000 H AND ABOVE) may be disabled to provide windows to eliminate any possible conflicts with your system monitor, disk controller, etc.
- * Perfect for small systems since BOTH RAM and EPROM may co-exist on the same board.
- * BOARD may be partially populated as 56K.

We took our very popular 32K S100 EPROM Card and added additional logic to create a more versatile EPROM/RAM Board.

FEATURES:

- * This one board can be used in any one of four ways:
 - A. As a 32K 2716 EPROM Board
 - B. As a 32K 2732 EPROM Board (Using Every Other Socket)
 - C. As a mixed 32K 2716 EPROM/2K x 8 RAM Board
 - D. As a 32K Static RAM Board
- * Uses New 2K x 8 (TMM2016 or HM6116) RAM's
- * Fully Supports IEEE 696 Buss Standard (As Proposed)
- * Supports 24 Bit Extended Addressing
- * 200 NS (FAST!) RAM's are standard on the RAM Kit
- * Supports both Cromemco and North Star Bank Select
- * Supports Phantom
- * On Board wait State Generator
- * Every 2K Block may be disabled
- * Addressed as two separate 16K Blocks on any 64K Boundary
- * Perfect for MP/M* Systems
- * RAM Kit is very low power (300 MA typical)

A USER GUIDE TO THE UNIX SYSTEM by Jean Yates and Rebecca Thomas. Here at last is a clearly written book that allows you to use the Unix operating system easily, and at a fraction of the time it previously took. If you're using, evaluating or simply curious about this system, this is your book. BK1242 \$15.99

WORDSTAR MADE EASY by Walter A. Ettlin. Now WordStar is as simple to learn as it is easy to use. This book teaches WordStar in 14 easy lessons, saving hours of hard work. It comes with a convenient pull-out Command Card. BK1239 \$11.95

INTRODUCTION TO WORD PROCESSING by Hal Glatzer. This book explains in plain language what a word processor can do, how to use one, how it improves productivity—especially in businesses that handle lots of words—and how to buy one wisely. No technical knowledge required, for all first-time users and those considering purchasing a word processor. BK1238 \$12.95

THE CUSTOM TRS-80 AND OTHER MYSTERIES—by Dennis Kitz. More than 300 pages of TRS-80 customizing information. With this book you'll be able to explore your computer like never before. Want to turn an 8 track into a mass storage unit? Individual reverse characters? Replace the BASIC ROMs? Make Music? High speed, reverse video, Level I and Level II? Fix it if it breaks down? All this and much, much more. Even if you have never used a soldering iron or read a circuit diagram, this book will teach you how! This is the definitive guide to customizing your 80! BK1218 \$29.95.*

BASIC FASTER AND BETTER AND OTHER MYSTERIES—by Lewis Rosenfelder. You don't have to learn assembly language to make your programs run fast. With the dozens of programming tricks and techniques in this book you can sort at high speed, swap screens in the twinkling of an eye, write INKEY routines that people think are in assembly language and add your own commands to BASIC. Find out how to write elegant code that makes your BASIC really hum, and explore the power of USR calls. BK1221 \$29.95.*

THE CP/M HANDBOOK (with MP/M)—by Rodnay Zaks. A complete guide and reference handbook for CP/M—the industry standard in operating systems. Step-by-step instruction for everything from turning on the system and inserting the diskette to correct user discipline and remedial action for problem situations. This also includes a complete discussion of all versions of CP/M up to and including 2.2, MP/M and CDOS. BK1187 \$14.95.*

TRS-80 DISK AND OTHER MYSTERIES—by Harvard C. Pennington. This is the definitive work on the TRS-80 disk system. It is full of detailed "How to use," information with examples, samples and in-depth explanations suitable for beginners and professionals alike. The recovery of one lost file is worth the price alone. BK1181 \$22.50.*

MICROSOFT BASIC DECODED AND OTHER MYSTERIES—by James Favour. From the company that brought you TRS-80 DISK AND OTHER MYSTERIES. Contains more than 6500 lines of comments for the disassembled Level II ROMs and six additional chapters describing every BASIC subroutine, with assembly language routines showing how to use them. Flowcharts for all major routines give the reader a real insight into how the interpreter works. BK1186 \$29.50.*

Introductory

KILOBAUD KLASROOM—by George Young and Peter Stark. Learning electronics theory without practice isn't easy. And it's no fun to build an electronics project that you can't use. *Kilobaud Klassroom* the popular series first published in *Kilobaud Microcomputing*, combines theory with practice. This is a practical course in digital electronics. It starts out with very simple electronics projects, and by the end of the course you'll construct your own working microcomputer!

Authors Young and Stark are experienced teachers, and their approach is simple and direct. Whether you're learning at home or in the classroom, this book provides you with a solid background in electronics—and you'll own a computer that you built yourself! BK7386 \$14.95

TOOLS & TECHNIQUES FOR ELECTRONICS—by A. A. Wicks. This is an easy-to-understand book written for the beginning kit-builder as well as the experienced hobbyist. It has numerous pictures and descriptions of the safe and correct ways to use basic and specialized tools for electronic projects, as well as specialized metal-working tools and the chemical aids which are used in repair shops. BK7348 \$4.95.*

MICROCOMPUTER DATA COMMUNICATIONS SYSTEMS by Frank J. Derfler. This text has a lot of good information on message systems and information utilities; the fundamentals of data communications, modems, terminals, and software for specific microcomputers. Interesting and informative for the beginner, yet a good reference for the experienced data communications user. BK1243 \$12.95

UNDERSTANDING AND PROGRAMMING MICROCOMPUTERS—A valuable addition to your computing library. This two part text includes the best articles that have appeared in 73 and Kilobaud Microcomputing magazines on the hardware and software aspects of microcomputing. Well known authors and well structured text helps the reader get involved. BK7382 \$10.95.*

SOME OF THE BEST FROM KILOBAUD/MICROCOMPUTING—A collection of the best articles that have recently appeared in *Kilobaud/MICROCOMPUTING*. Included is material on the TRS-80 and PET systems, CP/M, the 8080/8085/Z80 chips, the ASR-33 terminal. Data base management, word processing, text editors and file structures are covered too. Programming techniques and hardware construction projects for modems, high speed cassette interfaces and TVTs are also included in this large format, 200 plus page edition. BK7311 \$10.95.*

DON'T (or How to Care for Your Computer)—by Rodnay Zaks. In plain language, with numerous illustrations, this book tells all the do's and don't's of the care, preservation and correct operation of the small computer system. Specific chapters cover each piece of hardware and software, as well as safety and security precautions and help for problem situations. Have your computer work right the first time and keep it working. No technical background required. For all computer users. BK1237 \$11.95.

YOUR FIRST COMPUTER—by Rodnay Zaks. Whether you are using a computer, thinking about using one or considering purchasing one, this book is indispensable. It explains what a computer system is, what it can do, how it works and how to select various components and peripheral units. It is written in everyday language and contains invaluable information for the novice and the experienced programmer. (The first edition of this book was published under the title "An Introduction to Personal and Business Computing") BK1191 \$8.95*

MICROPROCESSOR INTERFACING TECHNIQUES—by Austin Lesca & Rodnay Zaks—will teach you how to interconnect a complete system and interface it to all the usual peripherals. It covers hardware and software skills and techniques, including the use and design of model buses such as the IEEE 488 or S-100. BK1037 \$17.95.*

AN INTRODUCTION TO MICROCOMPUTERS, VOL. 0—The Beginner's Book—Written for readers who know nothing about computers—for those who have an interest in how to use computers—and for everyone else who must live with computers and should know a little about them. The first in a series of 4 volumes, this book will explain how computers work and what they can do. Computers have become an integral part of life and society. During any given day you are affected by computers, so start learning more about them with Volume 0. BK1130 \$12.50.*

AN INTRODUCTION TO MICROCOMPUTERS, VOL. 1—2nd Edition completely revised. Dedicated to the basic concepts of microcomputers and hardware theory. The purpose of Volume 1 is to give you a thorough understanding of what microcomputers are. From basic concepts (which are covered in detail), Volume 1 builds the necessary components of a microcomputer system. This book highlights the difference between minicomputers and microcomputers. BK1030 \$15.95

THE NEW HOBBY COMPUTERS—This book takes it from where *Hobby Computers Are Here!* leaves off, with chapters on Large-Scale Integration, how to choose a microprocessor chip, an introduction to programming, low-cost I/O for a computer, computer arithmetic, checking memory boards...and much, much more! Don't miss this tremendous value! BK7340 Only \$4.95.*

AN INTRODUCTION TO MICROCOMPUTERS, VOL. 0—The Beginner's Book—Written for readers who know nothing about computers—for those who have an interest in how to use computers—and for everyone else who must live with computers and should know a little about them. The first in a series of 4 volumes, this book will explain how computers work and what they can do. Computers have become an integral part of life and society. During any given day you are affected by computers, so start learning more about them with Volume 0. BK1130 \$7.95.*

HOBBY COMPUTERS ARE HERE!—If you want to come up to speed on how computers work—hardware and software—this is an excellent book. It starts with fundamentals and explains the circuits and the basics of programming, along with a couple of TVT construction projects, ASCII, Baudot, etc. This book has the highest recommendations as a teaching aid. BK7322 \$4.95.*

Programming

MICROCOMPUTING BOOKS

Z-80

6502

68000/6809

TRS-80 ASSEMBLY LANGUAGE—by Hubert S. Howe, Jr. This book incorporates into a single volume all the pertinent facts and information you need to know to program and enjoy the TRS-80. Included are clear presentations of all introductory concepts, completely tested practical programs and subroutines, details of ROM and RAM and disk operating systems, plus comprehensive tables, charts and appendices. Suitable for the first time user or more experienced users. BK1217 \$9.95.*

INSIDE LEVEL II—For machine language programmers. This is a comprehensive reference guide to the Level II ROMs, allowing easy utilization of the sophisticated routines they contain. It concisely explains set-ups, calling sequences, variable passage and I/O routines. Part II presents an entirely new composite program structure which unloads under the SYSTEM command and executes in both BASIC and machine code with the speed and efficiency of a compiler. Special consideration is given to disk systems. BK1183 \$15.95.*

PROGRAMMING THE Z-80—by Rodney Zaks. Here is assembly language programming for the Z-80 presented as a progressive, step-by-step course. This book is both an educational text and a self-contained reference book, useful to both the beginning and the experienced programmer who wish to learn about the Z-80. Exercises to test the reader are included. BK1122 \$15.95.*

Z-80 ASSEMBLY LANGUAGE PROGRAMMING—by Lance A. Leventhal. This book thoroughly covers the Z-80 instruction set, abounding in simple programming examples illustrating software development concepts and actual assembly language usage. Features include Z-80 I/O devices and interfacing methods, assembler conventions, and comparisons with 8080A/8085 instruction sets and interrupt structure. BK1177 \$16.99.*

PROGRAMMING THE 6502 (Third Edition)—Rodney Zaks has designed a self-contained text to learn programming, using the 6502. It can be used by a person who has never programmed before, and should be of value to anyone using the 6502. The many exercises will allow you to test yourself and practice the concepts presented. \$13.95.* BK1005

6502 APPLICATIONS BOOK—Rodney Zaks presents practical application techniques for the 6502 microprocessor, assuming an elementary knowledge of microprocessor programming. You will build and design your own domestic-use systems and peripherals. Self-test exercises included. BK1006 \$12.95.*

Cook Books

CMOS COOKBOOK—by Don Lancaster. Details the application of CMOS, the low power logic family suitable for most applications presently dominated by TTL. Required reading for every serious digital experimenter! BK1011 \$10.50.*

TTL COOKBOOK—by Don Lancaster. Explains what TTL is, how it works, and how to use it. Discusses practical applications, such as a digital counter and display system, events counter, electronic stopwatch, digital voltmeter and a digital tachometer. BK1063 \$9.50.*

TVT COOKBOOK—by Don Lancaster. Describes the use of a standard television receiver as a microprocessor CRT terminal. Explains and describes character generation, cursor control and interface information in typical, easy-to-understand Lancaster style. BK1064 \$9.95.*

NANOS SYSTEM REFERENCE CARDS FOR APPLE II, APPLE II PLUS, MODELS I, II, III AND COLOR COMPUTER

At last! No more flipping through the pages of the Basic manual! No more working through the maze of machine language instructions! These cards completely summarize the Basic and Assembler

manuals! FEATURES INCLUDE: memory map, eyeball graphics, math instructions, basic commands, store instructions, basic functions, load instructions, basic statements, move instructions, special keys, exchange instructions, print using examples, shift instructions, basic special characters, compare instructions, basic assembler messages and codes, branch instructions, basic facts, data alteration instructions, reserved words, I/O instructions, ROM routines, complete character chart with graphics and space-compression codes, hex-dec chart, control code cross-reference, assembler instructions commands and operators, screen line layout, editor commands & subcommands, condition code easy access. Designed as a fold-up, accordion-style card, fits in your pocket. Panels organized for optimum speed for reference.

Model I: Basic only FC1001	\$2.95
Model I: BASIC and Assembler FC1002	\$4.95
Model II: BASIC and Assembler FC1005	\$5.95
Model III: BASIC only FC1004	\$3.95
Model III: BASIC and Assembler FC1003	\$5.95
Color: BASIC and Extended FC1006	\$4.95
Apple II: BASIC only FC1007	\$3.95
Apple II: BASIC & 6502 FC1008	\$4.95

PET/CBM PERSONAL COMPUTER GUIDE—by Adam Osborne and Carol Donahue. **REVISED SECOND EDITION** This is the book that will show you what the Commodore PET or CBM can do and how to get your's up and running. Designed as a self-teaching BASIC tutorial, the book will teach you both BASIC and CBM BASIC, yet it assumes no knowledge of computers or programming. Included are: complete operating instructions, Description of all PET/CBM BASIC statements, optimal programming techniques and solutions to many programming problems. BK1231 \$15.00

SOME COMMON BASIC PROGRAMS, APPLE II EDITION—by Lon Poole et al. A powerful collection of financial, statistical, home management and mathematics programs—76 in all—Each program is presented with BASIC source code, operating instructions and descriptions. If you're a beginning programmer you can learn from this book what well designed and documented programs look like. BK1232 \$14.95

UNDERSTANDING YOUR VIC VOL. 1: BASIC PROGRAMMING—by David Schultz. For the beginning VIC programmer—this book is full of examples and exercises (with expected results included as immediate feedback) that will help you to quickly and easily learn about the VIC. Included are chapters on program design with the use of pseudo code and data dictionaries to refine programming problems, and on VIC color and sound features. A fine learn-by-doing programming guide. BK1234 \$11.95.

6502 ASSEMBLY LANGUAGE PROGRAMMING—by Lance A. Leventhal. This book provides comprehensive coverage of the 6502 microprocessor assembly language. Leventhal covers over 80 programming examples from simple memory load loops to complete design projects. Features include 6502 assembler conventions, input/output devices and interfacing methods and programming the 6502 interrupt system. BK1176 \$16.99.*

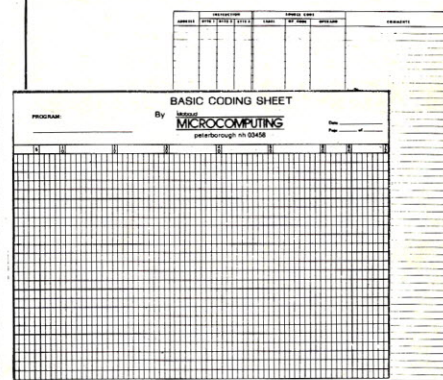

THE APPLE II USER'S GUIDE—By Lon Poole, Martin McNiff, and Steven Cook This guide is the key to unlocking the full power of your Apple II or Apple II Plus. Topics include: "Applesoft and Integer BASIC Programming"—especially how to make the best use of Apple's sound, color and graphics capabilities, "Machine Level Programming," "Hardware Features"—which covers the disk drive and printer, and "Advanced Programming"—describing high resolution graphics techniques and other advanced applications. Well organized and easy to use. BK1220 \$16.95

6809 MICROCOMPUTER PROGRAMMING AND INTERFACING—by Andrew C. Staagaard, Jr. Getting involved with Tandy's new Color Computer? If so, this new book from the Blacksburg Group will allow you to exploit the awesome power of the machine's 6809 microprocessor. Detailed information on processor architecture, addressing modes, register operation, data movement, arithmetic logic operations, I/O and interfacing is provided, as well as a review section at the end of each chapter. Four appendices are included covering the 6809 instruction set, specification sheets of the 6809 family of processors, other 6800 series equipment and the 6809/6821 Peripheral Interface Adapter. This book is a must for the serious Color Computer owner. BK1215 \$13.95.*

68000 MICROPROCESSOR HANDBOOK—By Gerry Kane. Whether you're currently using the 68000, planning to use it, or simply curious about one of the newest and most powerful microprocessors, this handbook has all the answers. A clear presentation of signal conversions, timing diagram conventions, functional logic, three different instruction set tables, exception processing, and family support devices provides more information about the 68000 than the manufacturer's data sheets. A stand alone reference book which can also be used as a supplement to *An Introduction to Microcomputers: Vol. 2—Some Real Microprocessors*. BK1216 \$9.95

68000 ASSEMBLY LANGUAGE PROGRAMMING—by Gerry Kane, et al. A straightforward self teaching text book on assembly language programming for the 68000 microprocessor. This book contains the entire instruction set, describes the function of assemblers and assembly instructions and discusses basic software development concepts. A large number of practical programming examples are included. BK1233 \$16.99

MICROCOMPUTING CODING SHEETS Microcomputing's dozen or so programmers wouldn't try to work without these handy scratch pads, which help prevent the little errors that can cost hours and hours of programming time. Available for programming in Assembly/Machine Language (PD1001), which has columns for address, instruction (3 bytes), source code (label, op code, operand) and comments; and for BASIC (PD1002) which is 72 columns wide. 50 sheets to a pad. \$2.39.*

Basic & Pascal

INTRODUCTION TO TRS-80 LEVEL II BASIC AND COMPUTER PROGRAMMING—by Michael P. Zabinski. Written by an experienced educator, this is the book for those beginners who want to learn about computers without having to become an expert. It has practical programs, useful line-by-line comments, excellent flowcharts accompanied by line numbers and over 200 exercises which help the reader assess progress, reinforce comprehension, and provide valuable practical experience. BK1219 \$10.95.*

LEARNING TRS-80 BASIC—by David A. Lien, Dr. Lien, who is the author of THE BASIC HANDBOOK and the original Radio Shack LEVEL I USER'S MANUAL, has compiled a tutorial which includes portions of the original USER'S MANUAL, and most of LEARNING LEVEL II along with extensive additions. It will completely cover the TRS-80 Models I, II, III, and 16 (sorry, not the color or pocket computers). It is, of course, written in the easy learning style which readers of Dr. Lien's books have come to enjoy. BK1175 \$19.95.

THE BASIC HANDBOOK—SECOND EDITION—by David Lien. This book is unique. It is a virtual ENCYCLOPEDIA of BASIC. While not favoring one computer over another, it explains over 250 BASIC words, how to use them and alternate strategies. If a computer does not possess the capabilities of a needed or specified word, there are often ways to accomplish the same function by using another word or combination of words. That's where the HANDBOOK comes in. It helps you get the most from your computer, be it a "bottom-of-the-line" micro or an oversized monster. BK1174 \$19.95.*

BASIC BASIC (2ND EDITION)—by James S. Coan. This is a textbook which incorporates the learning of computer programming using the BASIC language with the teaching of mathematics. Over 100 sample programs illustrate the techniques of the BASIC language and every section is followed by practical problems. This second edition covers character string handling and the use of data files. BK1026 \$10.50.*

ADVANCED BASIC—Applications including strings and files, coordinate geometry, area, sequences and series, simulation and graphing and games. BK1000 \$10.75.*

INTRODUCTION TO PASCAL—by Rodney Zaks. A step-by-step introduction for anyone wanting to learn the language quickly and completely. Each concept is explained simply and in a logical order. All features of the language are presented in a clear, easy-to-understand format with exercises to test the reader at the end of each chapter. It describes both standard PASCAL and UCSD PASCAL—the most widely used dialect for small computers. No computer or programming experience is necessary. BK1189 \$14.95.*

PROGRAMMING IN PASCAL—by Peter Grogono. The computer programming language PASCAL was the first language to embody in a coherent way the concepts of structured programming, which has been defined by Edsger Dijkstra and C.A.R. Hoare. As such, it is a landmark in the development of programming languages. PASCAL was developed by Niklaus Wirth in Zurich; it is derived from the language ALGOL 60 but is more powerful and easier to use. PASCAL is now widely accepted as a useful language that can be efficiently implemented and as an excellent teaching tool. It does not assume knowledge of any other programming language and therefore suitable for an introductory course. BK1140 \$12.95.*

NEW

NEW

ANNOTATED BASIC—A NEW TECHNIQUE FOR NEO-PHYTES.—BASIC programming was supposed to be simple—a beginner's programming language which was so near to English that it could be easily understood. But, in recent years, BASIC has become much more powerful and therefore much more difficult to read and understand. BASIC simply isn't basic anymore.

Annotated BASIC explains the complexities of modern BASIC. It includes complete TRS-80® Level II BASIC programs that you can use. Each program is annotated to explain in step-by-step fashion the workings of the program. Programs are flowcharted to assist you in following the operational sequence. And—each chapter includes a description of the new concepts which have been introduced.

Annotated BASIC deals with the hows and whys of TRS-80 BASIC programming. *How* is a program put together? *Why* is it written that way? By observing the programs and following the annotation, you can develop new techniques to use in your own programs—or modify commercial programs for your specific use.

Annotated BASIC Volume 1 BK7384 \$10.95
Annotated BASIC Volume 2 BK7385 \$10.95
 Order Both Volumes and Save! BK738402 \$18.95

50 BASIC EXERCISES—by J. P. Lamoitier. This book is structured around the idea that the best way to learn a language is through actual practice. It contains 50 completely explained exercises: statement and analysis of the problem, flowcharts, programs and actual runs. Program subjects include mathematics, business, games, and operations research, and are presented in varying levels of difficulty. This format enables anyone to learn BASIC rapidly, checking their progress at each step. BK1192 \$12.95.*

Business

THEORY Z—How American Business Can Meet the Japanese Challenge—by William Ouchi. Why are the Japanese catching up and surpassing American industrial productivity? What allows Japanese industrialists to offer guaranteed lifetime employment to their workforce? This book will help you understand the Theory Z managerial philosophy and its implications for the American corporate future. Examples are given of the American industrial giants already operating under Z-style management, and the impact of this style on the quality of their executives and workers is explored. A must for the alert businessman, large or small. BK1226 \$12.95.*

SO YOU ARE THINKING ABOUT A SMALL BUSINESS COMPUTER—by Richard G. Canning and Nancy C. Leeper. For a well-organized manual on the process of selecting the right computer system for your small business, this text can't be excelled. Designed to introduce the novice in data and word processing to the real benefits of computerization, the book is filled with money- and time-saving tips, photos of equipment, lists of suppliers, prices, explanations of computer terminology, and helpful references to additional sources of information. Everyone contemplating a first computer installation should have this book. BK1222 \$14.00.*

PAYROLL WITH COST ACCOUNTING—IN BASIC—by L. Poole & M. Borchers, includes program listings with remarks, descriptions, discussions of the principle behind each program, file layouts, and a complete user's manual with step-by-step instructions, flowcharts, and simple reports and CRT displays. Payroll and cost accounting features include separate payrolls for up to 10 companies, time-tested interactive data entry, easy correction of data entry errors, job costing (labor of distribution), check printing with full deduction and pay detail, and 16 different printed reports, including W-2 and 941 (in CBASIC). BK1001 \$20.00.*

SOME COMMON BASIC PROGRAMS—Published by Adam Osborne & Associates, Inc. Perfect for non-technical computerists requiring ready-to-use programs. Business programs, plus miscellaneous programs. Invaluable for the user who is not an experienced programmer. All will operate in the stand-alone mode. BK1053 \$14.99

PIMS: PERSONAL INFORMATION MANAGEMENT SYSTEM—Learn how to unleash the power of a personal computer for your own benefit in this ready-to-use data-base management program. BK1009 \$11.95.*

GAMES

40 COMPUTER GAMES FROM KILOBAUD MICROCOMPUTING—Forty games in all in nine different categories. Games for large and small systems, and even a section on calculator games. Many versions of BASIC used and a wide variety of systems represented. A must for the serious computer gamesman. BK7381 \$7.95.*

BASIC COMPUTER GAMES—Okay, so once you get your computer and are running in BASIC, then what? Then you need some programs in BASIC, that's what. This book has 101 games for you from very simple to real buggers. You get the games, a description of the games, the listing to put in your computer and a sample run to show you how they work. Fun. Any one game will be worth more than the price of the book for the fun you and your family will have with it. BK1074 \$7.50.*

MORE BASIC COMPUTER GAMES—Edited by David H. Ahl. More fun in BASIC! 84 new games from the people who brought you *BASIC Computer Games*. Includes such favorites as Minotaur (battle the mythical beast) and Eliza (unload your troubles on the doctor at bargain rates). Complete with game description, listing and sample run. BK1182 \$7.50.*

WHAT TO DO AFTER YOU HIT RETURN—PCC's first book of computer games... 48 different computer games you can play in BASIC... programs, descriptions and many illustrations. Lunar Landing, Hamurabi, King, Civel 2, Qubic 5, Taxman, Star Trek, Crash, Market, etc. BK1071 \$16.50.*

Money making

HOW TO MAKE MONEY WITH COMPUTERS—In 10 information-packed chapters, Jerry Felsen describes more than 30 computer-related, money-making, high profit, low capital investment opportunities. BK1003 \$15.00.*

HOW TO SELL ANYTHING TO ANYBODY—According to *The Guinness Book of World Records*, the author, Joe Girard, is "the world's greatest salesman." This book reveals how he made a fortune—and how you can, too. BK7306 \$2.25.*

THE INCREDIBLE SECRET MONEY MACHINE—by Don Lancaster. A different kind of "cookbook" from Don Lancaster. Want to slash taxes? Get free vacations? Win at investments? Make money from something that you like to do? You'll find this book essential to give you the key insider details of what is really involved in starting up your own money machine. BK1178 \$5.95.*

MICROCOMPUTING BOOKS

Basex is No Joke Gold Mine for 8080/Z-80 Users Ensuring Your System's Safety An Introduction to UCSD Pascal

My Micro Speaks Basex (And Loves It)

Paul Warme
Hayden Book Company, Inc., 1981
50 Essex St.
Rochelle Park, NJ 07662
Softcover, 164 pp., \$9.95

So what in the world is Basex? Is it one of those joke "languages" like Foul and Filthy?

No, Basex is for real, and Paul Warme's book, *My Micro Speaks Basex (And Loves It)*, is an introductory text to this new, relatively simple language.

Author Warme (who developed Basex) takes a breezy, conversational approach to his topic. The book flows along in a chatty sort of way, building in difficulty as it progresses.

Warme goes to great lengths to give thorough and detailed descriptions of all of his language's attributes, and down-to-earth program samples are liberally sprinkled throughout to give the reader a chance to see what Basex can do in action. Warme provides in-depth discussion on the control of program flow, inputs and outputs, memory load and store commands, program editing, text string handling, subroutines and graphics—the whole ball of wax.

As for the language itself, Basex has some intriguing benefits. Warme claims that a typical Basex program can run ten times faster than its Basic equivalent (great for games like chess and checkers, and most graphics applications). It also features a simplified program entry method that should, at least theoretically, result in a reduced memory requirement.

But Basex has its drawbacks, too, and they are considerable. The language, for instance, works only with whole integers in the range -32768 to 32767, and it's impossible to use for trigonometric functions (sin, cos, tan) or noninteger work (SQR, EXP, LOG).

Another disadvantage of Basex, as Warme notes, is the requirement to break down arithmetic expressions into single operations—so $B * C + D$ would have to be handled as $MLT B * C; ADD A + D$. Kind of messy. Add to all of this the fact that the book is almost exclusively devoted to 8080 and Z-80 microprocessors, and Basex quickly loses much of its appeal.

Still, Basex looks like an interesting beginner's language if you don't ask too much from it. The only problem is: how many beginners are going to be willing to tackle an offbeat language like this *after* learning Basic? Sure, a newcomer to computing *could* learn Basex before being introduced to Basic, but that doesn't seem very likely, given Basic's widespread popularity. One would be better off mastering Basic, then learning a higher-level language for speed.

Basex is an interesting little language—and the book is fun on an intellectual level, but it's hard to see how it can become anything but an intellectual curiosity.

John Edwards
Glendale, NY

8080/Z-80 Assembly Language

Alan R. Miller
John Wiley & Sons, Inc., 1981
605 Third Avenue
New York, NY 10158
Paperback, 318 pp., \$9.95

Alan Miller has been working with microcomputers since the early days of the Altair. As far back as 1976 he had his students performing meaningful calculations using an 8K version of Basic. And that was before floppy disks.

When floppies became available, Miller and his students built their own disk con-

troller, independently discovering that floppy transfer rates are faster than an 8080 can keep up with in a "test status, loop on not ready" mode.

The reason for this background information is to assure the reader that Miller knows his subject intimately. Just about everything you'll ever want to know about assembly language programming for systems or smart controllers is contained in *8080/Z-80 Assembly Language*. And with its complete table of contents and index, you'll be able to find the information easily.

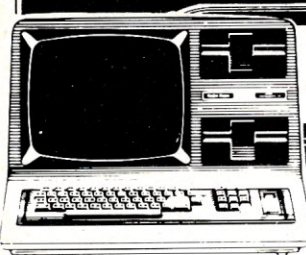

In the preface, Miller states that his goal with *8080/Z-80 Assembly Language* is to provide a complete reference book, and to demonstrate useful assembly language techniques. It isn't billed as a self-learning text for beginners, but it should be acquired by all beginners as soon as they have taken their first programming steps.

The reason for this is that the book contains examples of just about everything you will want to do when you start writing your first programs. And the examples are given for both the 8080 instruction set and the more powerful Z-80 superset. Having this book handy will relieve you of the necessity for re-inventing lots of wheels.

Since the book is not intended as an introductory text, some of the explanations of the example techniques are less than completely detailed, but all program examples are illustrated with program listings reproduced from actual computer printouts (for confidence) and those listings are heavily commented. It would be possible to learn 8080 or Z-80 programming by using this book in conjunction with the respective CPU reference manual. A lot of us (including Miller) started with less.

In the nit-picking department, the book is flawed by too many typos ("Lifeboat Associates"!) and more than a couple of misconceptions (CP/M was not developed for S-100 bus systems; PSW does not refer to the flag register alone . . .) but

EXPAND YOUR APPLE® II

VisiCalc®

Why buy a bigger computer? You can get up to 177K workspace memory on your Apple II! You can even use 80-column display and/or a hard disk!

Our VC-Expand system lets you use the entire displayed matrix. You can save files on more than one diskette. Our VC-Expand/80 is compatible with several 80-column boards, and VC-Expand/80 for Nestar uses the Cluster/One hard disk as well. The new configuration dialog eliminates compatibility problems with additional hardware enhancements.

Ask your computer dealer about VC-Expand and the Saturn RAM boards. See how much bigger and better your VisiCalc models can become.

PASCAL

Are you tired of swapping diskettes all afternoon? Put your editor and filer on the Saturn Pseudo-Disk! Stop waiting for the real disk drive and let the RAM on one of our plug-in boards speed up your operation. You can also use the Pseudo-Disk to store programs, data, etc. - just like a real disk, only much faster.

CP/M®

Is disk access time slowing you down? Use the Saturn Pseudo-Disk for CP/M! No moving parts, no hum, no hassle! The Pseudo-Disk consists of one or more plug-in RAM boards, with accompanying software. See one today at your nearest computer store.

BASIC

Is your computer too small for your programs? Expand your Apple's memory and add an internal Pseudo-Disk! Our MOVEDOS program puts DOS into one of our plug-in memory boards, adding 10K to your user programming space. RAMEXPAND allows chaining and overlaying with as much RAM as you wish to add. The PSEUDO-DISK for DOS works just like a disk drive, but much faster. The necessary software is included with each Saturn RAM board. See your computer dealer today for these exciting expansion systems.

these do not detract from the accuracy or usefulness of the real meat of the text.

A more serious shortcoming is that too much of the material is hardware-specific to the author's own computer. Some of the operations in his examples simply will not work with some non-S-100 bus systems. Somewhat alleviating this situation is the fact that the preface does detail exactly what hardware was used to produce the sample programs. If they don't work for you, it could be due to differences in hardware. The less experienced reader might have a little trouble figuring this out.

But considered as a reference work for the serious programmer, and as a second text for the beginner, this book is a gold mine of useful program examples and reference tables in its ten appendixes. With its presentation of isolated examples of programming tricks, as well as listings of complete monitor programs for both of the most popular microprocessors, it is a reference work you'll use for years to come. I only wish I'd had a copy back in 1976.

Don't! (Or How To Care For Your Computer)

Rodnay Zaks
Sybex, 1981
2344 Sixth St.
Berkeley, CA 94710
Paperback, 244 pp., \$11.95

The glib salesman at your local computer emporium is likely to turn green at the sight of *Don't! (Or How To Care For Your Computer)*. After all, he assured you that microcomputers are not only re-

liable, but they're foolproof too. So why would someone devote an entire 244-page book to the subject of computer care?

Starting with the premise that most computer problems are the result of operator error, *Don't!* goes on to offer suggestions for keeping your system healthy and definitions you'll need to identify the source of your problems. After that brief but helpful tour, *Don't!* jumps into the specifics of caring for your system's individual parts.

Why would someone devote an entire 244-page book to the subject of computer care?

What better way to begin than with a chapter on the floppy disk? Here readers will find the first of the book's numerous horror stories. Once the author has you frightened, he starts to educate you about the inner workings of disk drives.

The same sort of behind-the-scenes explanations are found in chapters covering hard disks, CRTs, printers, tape units, software and the computer itself. There's even a short chapter devoted to the care of documentation.

All of this doesn't leave you feeling anxious to attack your computer's ills with a soldering iron and pliers; instead the emphasis is on preventive maintenance. Author Rodnay Zaks also includes chapters on how to design a special computer room and on computer security, although those topics seem a bit far-fetched for the home or small business user.

The text in *Don't!* is easy to read and free of jargon and is supplemented by many humorous yet educational drawings and cartoons.

In handling your computer system, you can, as the author says, "learn through experience." Or you can take advantage of other people's hard-earned wisdom via *Don't!*. Regardless of what the friendly salesman says, take a copy of *Don't!* home along with that new computer.

Timothy Daniel
Hancock, NH

UCSD Pascal: A Beginner's Guide to Programming Microcomputers

J.N.P. Hume and R. C. Holt
Reston Publishing Company, 1982
11480 Sunset Hills Road
Reston, VA 22090
Softcover, 346 pp., \$12.95

UCSD Pascal has become one of the

most popular languages available for microcomputers. Several reasons account for its widespread acceptance, with portability and ease of use ranking near the top of the list.

With such popularity, it's easy to see why there are so many books written about Pascal; a large proportion of these touch on some aspect of the UCSD version. Now there's one written for the person who has just brought up UCSD Pascal on his or her computer and is ready to begin learning to program for the first time.

Authors J.N.P. Hume and R.C. Holt take the approach that it's better to introduce a series of Pascal Subsets, which they call PS/1, PS/2, PS/3 and so on, and allow the new programmer to become fully familiar with these limited subsets before pressing on to more complex concepts.

They spend the first two chapters describing their approach and introducing the user to the most basic concepts of computing. So before asking the reader to write anything on the computer, they cover the language, the components of a computer and the way input/output is handled.

Each chapter includes a summary of the points covered, and most chapters include glossaries of terms used. Each chapter also includes exercises that the reader can use to test his or her progress. Unfortunately, there are no solutions provided, but in many cases there is no "right" answer and the only true test is whether the reader's solution works.

Chapter 3 offers the first real look at programming in Pascal, and it's a simple example of calculation. Programming is still discussed from a theoretical perspective as the reader is not yet instructed to write a program on the computer. This chapter is PS/1 and deals with the types of information that Pascal can handle (characters, numbers, character strings and expressions).

To someone using a computer for the first time, chapter 4 can be the most helpful chapter. It introduces the basic UCSD command and covers briefly what Ken Bowles covers in great detail in his *Beginner's Guide to the UCSD Pascal System*. (Bowles' book is not for the beginner to Pascal or to computers, but it contains a wealth of information on the use of the UCSD system. Hume and Holt spend more time discussing Pascal programming, but less on the details of the system.) By the time the reader finishes chapter 4, he or she will have written, run and saved a Pascal program file, and a major conceptual and psychological hurdle will have been leaped.

From this point on, the pace accelerates. Chapter 5 introduces another subset, PS/2, which deals with constants, variables and assignments. Tracing is covered, as is program execution, data input and the conversion of integer num-

bers to real numbers.

Chapter 6, PS/3, covers control flow, including loops, conditions, Boolean variables and branching, and chapter 7 builds the concept of structured programming. Most of the reader's time will be spent learning how to structure control flow, an ability that has tended to set Pascal apart from other languages—at least in the minds of many programmers and instructors.

The authors favor the use of flowcharts as an aid toward achieving structured flow of programs, but do not spend much time on this aspect of programming. While the reader certainly won't learn flowcharting from this book, he or she will come away more aware of its benefits.

The eighth chapter presents PS/4 arrays. Chapter 9, with PS/5, covers character strings in detail and introduces file-handling with the reading of lines and EOF (End Of Line). Since UCSD Pascal handles strings a little differently than standard Pascal, chapter 9 is critical for the UCSD Pascal user, and contains information that, unlike other chapter contents, may not be directly useful in a non-UCSD system.

A brief discussion of ways to structure the attack on a specific program is included in chapter 10. While far from exhaustive, it's a fair introduction to a dif-

ficult concept. The authors present the idea of top-down programming and step-wise refinement and suggest ways to apply these ideas, but don't go much further than that. The reader would need to refer to more detailed texts to pursue this subject.

A Beginner's Guide is an outstanding introduction to both UCSD Pascal and the UCSD system.

Chapter 11 deals with pattern or word recognition and is useful in demonstrating that Pascal can do other things besides number-crunching. The author covers another Pascal Subset, PS/6, which is devoted to subprograms, in chapter 12.

The UCSD graphics package, Turtle Graphics, and more information on the UCSD system commands, especially the editor and the filer, are presented in chapters 13 and 14.

Chapter 15 is a solid introduction to searching and sorting methods, and presents the binary search and the method

of sorting by merging. The concept of estimating the efficiency of sorting methods is also covered. Chapters 16 and 17 deal with testing and debugging, but also make one extremely important point that many other texts overlook: Be sure you solved the right problem. In other words, did your program answer the question that was asked? The importance of program specifications cannot be overemphasized.

The final three chapters cover data structures, queues and trees and pointers and buffers. Hume and Holt provide examples of these topics but the reader can expect to do some outside research to come up with a working program. The examples aren't nearly as complete as they should be.

The book closes with scientific calculations as well as the graphing of data and solving of linear and polynomial equations.

I found the book to be an outstanding introduction to both UCSD Pascal and the UCSD system. It does have weaknesses—it won't answer the reader's every question, and a bibliography of reference books suitable for the interested programmer wasn't included. But *UCSD Pascal* is still an excellent value at \$12.95.

Blacksburg, VA

El Monte, CA

Altos, Eagle and M/ACOM-OSI business computer specialist. Serving greater Los Angeles area with all your business computer needs. In-house service, custom programming, terminals, printers, etc. Open 9 AM-6 PM. **Computer Challenge Corp.**, 3380 Flair Drive, El Monte, CA 91731. 572-7292.

Nokomis, FL

We are the leading area computer store. We carry Cromemco, Apple, Vector Graphic; printers and terminals. We offer full software support including G/L, A/R, payroll and word processing. **Computer Centre**, 909 S. Tamiami Trail, PO Box 130, Nokomis, FL 33555. 484-1028.

Aurora, IL

Microcomputer systems for home or business; peripherals, software, books and magazines. Apple, Hewlett-Packard Series 80 Systems, HP calculators, IDS, Qume, Starwriter printers. **Farnsworth Computer Center**, 1891 N. Farnsworth Ave., Aurora, IL 60505. 851-3888.

Glenview, IL

Software only! Chicagoland's first software store carries software for most major brands of computers. Business, educational, programming aids, entertainment. Special orders our specialty. **The Software Store, Inc.**, 1767 Glenview Rd., Glenview, IL 60025. 724-7730.

Freehold, NJ

We specialize in computer software covering your business, education and recreation requirements. A large price discount and courteous service await you. Write today for our catalog. **American Computer Stores**, 177 South St. No. M7, Freehold, NJ 07728.

Akron, OH

Atari video game authorized independent servicer. Games serviced by factory trained technicians. Fast turnaround. Dealer inquiries invited. We stock genuine Atari game and joystick parts. **Greensburg Electronics**, 2618 Massillon Road, Akron, OH 44312. 644-3178.

Dealers: Listings are \$15 per month in prepaid quarterly payments, or one yearly payment of \$150, also prepaid. Ads include 25 words describing your products and services plus your company name, address and phone. (No area codes or merchandise prices, please.) Call Michelle at 603-924-9471 or write *Microcomputing*, Ad Department, Peterborough, NH 03458.

MICRO QUIZ

What Does This Program Do?

After the following program is executed, what is the value of C?

(answer on page 173)

C = -1

For J = 1 to 12

K = 0.5 * J

For L = 2 * J to 12 - 0.25 * J - 0.5 * K

If 2 * J ≤ 12 - 0.25 * J - 0.5 * K then

C = C + 1

Next L

Next J

CLUB NOTES

Philadelphia Area Computer Society

Users of Apple, Atari, CP/M, IBM, Ohio Scientific, Pascal, PET and TRS-80 are invited to Philadelphia Area Computer Society meetings, which take place on the third Saturday of each month at the LaSalle College Science Building.

Memberships include a subscription to "Data Bus," a monthly newsletter.

For further information, write to P.A.C.S., PO Box 1954, Philadelphia, PA 19105.

"Superletter"

A newsletter and user's group have been developed for Intertec SuperBrain and CompuStar users. The publication, "Superletter," features technical tips, articles, classified ads and reviews.

For information on the user's group and newsletter, write to Albert Abrams, PO Box 3121, Beverly Hills, CA 90212, or call 213-277-2410.

1800 User's Club

The four-year-old 1800 User's Club of Finland now includes more than 500 members.

The club's activities involve program cassettes, hardware and software competitions, monthly meetings in Helsinki, Finland, and a newsletter published ten times per year.

For further information, send a self-addressed envelope to Richard Eller, PO Box 559, 00101 Helsinki 10, Finland.

IBM PC User's Group

The initial meeting of the IBM PC User's Group of Toronto took place in September at the North York Central Branch Library in Willowdale, Ontario. Form and procedure for future activities was outlined at the meeting.

For information on membership and meetings, write to Tony Bagshaw, PO Box 1376, Station B, Downsview, Ontario M3H 5V6.

PLUG User's Group

PLUG, a user's group organized to promote the use of IBM-compatible computer equipment, announced its board of directors: Ed Dugan and David Moskovitz of San Francisco, CA, Jerry Wilson of Rochester, NY, and Charles Collier of Phoenix, AZ.

For information on PLUG, contact James Bunker of the Orsborn Group, 1275 Columbus, San Francisco, CA 94133. 415-928-3600.

Denver Amateur Computer Society

Monthly meetings of the Denver Amateur Computer Society take place on the third Wednesday of each month. This "broad interest club" issues the monthly newsletter "Interrupt," which includes information regarding specific user's groups in Denver.

For details, write to D.A.C.S., PO Box 1235, Englewood, CO 80150.

CSRA Computer Club

The CSRA Computer Club meets on the third Thursday of each month at 7:30 p.m. in the Student Center of the Medical College of (Augusta) Georgia.

For details on the CSRA, a club for computer hobbyists and professionals, write to PO Box 284, Augusta, GA 30903.

The CSRA includes several clubs that also meet in Augusta.

Atari User's Group meets on the first Thursday of each month at Campus Computers (contact Dan Huber, 404-860-2560). TRS-80 User's Group has meetings on the second Thursday of each month at the Medical College of Georgia (contact Steve Larson, 404-733-1232).

Apple User's Group meetings take place on the fourth Thursday of the month at the Computer Shop (contact George Nichols, 404-733-3562). And Heath/Zenith User's Group meets on the fourth Monday of each month at Campus Computers (contact Paul Pennington, 404-860-2934).

Circle 318 on Reader Service card.

Digital Dialing Units For Your Acoustic Coupler

Unit #1: the index finger of your right hand, used to manually dial a telephone number and place the telephone handset in the coupler's cradle.

Unit #2: TNW's new OPERATOR

Automatic Calling Unit, automatically pulse dials under computer or terminal control. Also provides unattended telephone answer capability. Use it with your acoustic coupler or most direct connect modems. 110 to 300 bits per second, powerful command interpreter, RS-232 interface to computer or terminal. Complete with power supply, cabinet, documentation, and full one year warranty for only \$129.

[illegible]

WE GAVE YOUR DRIVES THE FIRST BREAK THEY EVER HAD...

We've continued to improve the design (it's the size of a business card to fit within the drive), ease installation time (about 15 minutes) and models are now available for virtually all popular 8 inch drives (including a foreign version). So for those of you, who are still grinding down your drives, wearing out media and exposing yourself to unnecessary noise...isn't it time to give them a break?

OPTRONICS TECHNOLOGY
P.O. Box 81, Pittsford, N.Y. 14534, (716) 377-0369

Online 82

Eighty speakers will make presentations dealing with the impact of microcomputers on the on-line database industry at Online 82, scheduled for November 1-3 in Atlanta, GA.

During the conference, more than 75 exhibit booths will display and demonstrate databases, on-line systems, terminals, microcomputers and software.

For more information, contact Jean-Paul Emard, Online, Inc., 11 Tannery Lane, Weston, CT 06883. 203-227-8466.

Consumer Electronics Show

More than 20,000 buyers and tradespeople from 150 Far East electronics companies are expected to attend the fourth annual Hong Kong Consumer Electronics Show, scheduled for Nov. 2-4 at the Regent Hotel, New World Hotel and New World Center in Hong Kong.

Displays will feature audio and video equipment, calculators, computers, electronic toys, handheld games, watches and clocks.

For further information, contact A.D. Adams Advertising Co., 9 E. 38th St., New York, NY 10026. 212-685-9060.

AEDS Workshops

Three computer workshops are scheduled by the Association for Educational Data Systems for November and December.

The first, Computer Graphics/Microprocessor Personal Computer Systems, is slated for Nov. 4 and 5 in St. Louis, MO.

The second, Computer Literacy for Elementary School Educators, is planned for Nov. 12 and 13 in Atlanta, GA.

The final workshop, Instructional Uses of Computing, is scheduled for Dec. 2 and 3 in St. Louis.

For more information, call Shirley Easterwood at 202-822-7845 or write to AEDS, 1201 16th St., N.W., Washington, DC 20036.

NYSAEDS Computer Conference

"Moving Ahead With Instructional Computing" is the theme of the Seventeenth Annual Conference of the New York State Association of Educational Data Systems (NYSAEDS) on Nov. 7-9 at the Americana Hotel in Albany, NY.

The major topics to be covered are administrative uses of computers and curricular, hardware and programming issues.

For more information, contact Gary Bruce, 55 School St., Delevan, NY 14042.

CDLA Annual Meeting

The annual meeting of the Computer Dealers and Lessors Association is scheduled for Nov. 8-10 at the Greenbrier in White Sulphur Springs, WV. Programs will include "IBM Presents," "Leasing Strategies for the '80s" and "Computerizing Your Company."

For registration forms or information, write to CDLA Annual Meeting, 1212 Potomac St., N.W., Washington, DC 20007.

IIA Conference

A four-day exhibition sponsored by the Information Industry Association is planned for Nov. 8-11 at Walt Disney World Resort in Lake Buena Vista, FL. The show's theme is "The Information Business: Profits or Promises?"

The exhibition will feature the state of the art in information gathering, transfer and retrieval. For more details, call Karen MacArthur at 202-544-1969.

Comdex/Europe '82 and Comdex/Fall '82

The Interface Group has announced the specifics of its Comdex/Europe '82 and Comdex/Fall '82 shows.

Comdex/Europe, the first European Conference and Exposition for Independent Sales Organizations, is planned for Nov. 8-11 at the RAI Exhibition Centre in Amsterdam, The Netherlands.

The show will feature hundreds of United States exhibitors and also will attract European and Japanese companies involved with small systems, software and supplies. The exhibit floor will include room for 1,500 booths.

Comdex/Fall, the fourth annual National Conference and Exposition for Independent Sales Organizations, is slated for Nov. 29-Dec. 2 at the Las Vegas (NV) Convention Center. The show is expected to open with more than 1000 exhibitors and 3200 booths.

For information on either show, contact The Interface Group, PO Box 927, 160 Spleen St., Framingham, MA 01701. 800-225-4620 or 617-879-4502 (in Massachusetts).

IEEE Software and Applications Conference

The Sixth International Computer Software and Applications Conference Technical Show, sponsored by the Institute of Electrical and Electronics Engineers, is planned for Nov. 8-12 at the Palmer House in Chicago, IL.

Displays will be set up on Nov. 9 and exhibit hours are scheduled for Nov. 10-12.

For more information on "The Technical Show for Software Professionals," contact the IEEE Computer Society, PO Box 639, Silver Spring, MD 20901. 301-589-3386.

Virginia Tech Workshops

Virginia Polytechnic Institute and State University in Blacksburg, VA, will sponsor two November workshops on microcomputer interfacing.

Personal Microcomputer Interfacing and Scientific Instrumentation Automation is scheduled for Nov. 8-12 and Microcomputer Interfacing, Design and Programming Using the Z80/8085/8080 is planned for Nov. 15-17.

Participants at both workshops will receive hands-on experience in designing and testing concepts.

For further information, contact Dr. Linda Leffel, C.E.C., Virginia Tech, Blacksburg, VA 24061. 703-961-4848.

Microcomputers in Education

The College of Education at the University of South Alabama, in cooperation with the School of Continuing Education, will sponsor a two-day workshop in Biloxi, MS, on Nov. 11 and 12. "Microcomputers in Education" will be the theme of the workshop.

For registration forms or information, contact Judy Campbell, University of South Alabama, Mobile, AL 36688. 205-690-6528.

Northeast Computer Show and Office Equipment Exposition

The largest public business equipment show in the United States is slated for Nov. 11-14 at Hynes Auditorium in Boston, MA.

The fourth annual Northeast Computer Show and Office Equipment Exposition will feature software and hardware for business, industry, government, education and home use. The show will include micro and mini computers, data and word processing equipment, peripherals, accessories, services and supplies.

To reserve display space at the exhibit or for more information, call the show office at 617-739-2000.

National Systems Executive Forum

"Managing Software Development" will be the theme of a conference sponsored by George Washington University's School of Government and Business Administration. The National Systems Executive Forum is scheduled for Nov. 15-17 in Washington, DC.

The forum will present reviews and briefings on methods for managing large and small software application development projects.

For further information, contact U.S. Professional Development Institute, 12611 Davan Drive, Silver Spring, MD 20904. 301-622-5696.

ISE-USA Executive Briefing

International Software Enterprises-USA, Inc. continues its "Executive Briefing" series that began in September. The final three dates are Nov. 16 in Milwaukee, WI, Nov. 17 in Minneapolis, MN, and Dec. 8 in Chicago, IL.

The four-hour seminars will focus on a variety of issues relating to the proliferation and use of microcomputers in business and industry, effective application development and database management in the micro environment.

For details, contact ISE-USA, 85 W. Algonquin Road, Arlington Heights, IL 60005. 312-577-6800.

Basic: A Computer Language for Managers

The American Management Associations, Inc. has scheduled a trio of hands-on training sessions involving programming. The sessions, planned for Nov. 16-18 in Boston, MA, Dec. 1-3 in New York and Dec. 13-15 in Chicago, IL, are titled, Basic: A Computer Language for Managers.

The course is designed for managers who are unfamiliar with computers and computer programming.

For details, contact the AMA, 135 W. 50th St., New York, NY 10020. 212-246-0800.

How To Swallow Your Computer

A/E Systems Report, a newsletter on automation, and Design Compudata, a directory on automation, will sponsor a two-day conference on problems faced by design firms when installing new computer systems.

The conference, "How To Swallow Your Computer," is planned for Nov. 18-19 at Peachtree Plaza in Atlanta, GA.

For further information, contact Susan Johnson, Design Compudata, 45 Van Brunt Ave., Dedham, MA 02026. 617-326-1319.

Applefest '82

San Francisco will be the site of the West Coast Applefest '82. The conference and exposition, scheduled for Nov. 18-21 in San Francisco's Moscone Hall, will feature Apple and Apple-compatible computers, software, peripherals, accessories and publications.

For details, contact Northeast Expositions, 822 Boylston St., Chestnut Hill, MA 02167. 800-343-2222 or 617-739-2000 (in Massachusetts).

Applefest '82 was originally scheduled for Dec. 3-5.

Microcomputer Applications

Queue, Inc. has changed the date for the seminar Microcomputers in Mathematics, Science and Computer Education Curriculum to Nov. 20 from its original date of Nov. 12 and 13. The hands-on workshop will take place in Fairfield, CT.

For more details, contact Joy Segal, Queue, Inc., 5 Chapel Hill Drive, Fairfield, CT 06432. 203-335-0908.

Queue, Inc. also announced the cancellation of the symposium and exhibit, Microcomputers in the Language Arts Curriculum, originally slated for Nov. 5 and 6.

CLASSIFIEDS

Classified advertisements are intended for use by persons desiring to buy, sell or trade used computer equipment. No commercial ads are accepted.

Two sizes of ads are available. The \$5 box allows up to 5 lines of about 35 characters per line, including spaces and punctuation. The \$10 box allows up to 10 lines. Minimize use of capital letters to save space. No special layouts allowed. Payment is required in advance with ad copy. We cannot bill or accept credit.

Advertising text and payment must reach us 60 days in advance of publication (i.e., copy for March issue, mailed in February, must be here by Jan. 1). The publisher reserves the right to refuse questionable or inapplicable advertisements. Mail copy with payment to **Classifieds, Microcomputing**, Peterborough, NH 03458. Do not include any other material with your ad as it may be delayed.

Sinclair ZX 81/Timex 1000 user's group. Program exchange, quarterly newsletter, etc. For information: SASE to Diana Wright, 2170 Oakbrook Circle, Palatine, IL 60067 or call 312-934-9375.

Used Heath H-8 memory board, I/O card, terminal, software and complete H-8 system. Ten to 50 percent off list price. Send for free listing. D. Wong, Box 406, Groton Fall, NY 10519

To any user of PolyMorphic Equipment: We need any information available concerning interfacing the PolyMorphic System with a Trendata 1000 Printer. Send information to Dr. James F. Calhoun, Department of Psychology, Psychology Clinic, University of Georgia, Athens, GA 30602.

Interfacing information particularly needed but any information on the Trendata printer would be most helpful.

8K Visible Memory, ASR33, TNW103 IEEE Modem, SYM with Basic, all \$150 each. Send SASE for information. A. Singhania, 107 Fir, Lake Jackson, TX 77566. 713-297-3865.

ZX81/TS1000 Users: Free newsletter and software available from Z-WEST User's Group. No SASE, no money—just your name and address. Write us at PO Box 2411, Vista, CA 92083.

MICRO QUIZ

(from page 169)

Answer: 25

J = 1: L = 2 to 11.5 \geq 10 increments

J = 2: L = 4 to 11 \geq 8 increments

J = 3: L = 6 to 10.5 \geq 5 increments

J = 4: L = 8 to 10 \geq 3 increments

J = 5: L = 10 to 9.5 \geq 0 increments

J = 12: L = 24 to 6 \geq 0 increments

Thus, C is incremented $10 + 8 + 5 + 3 = 26$ times, to give a final value of 25.

Package to Support Plotter

Ferox Microsystems Inc. has announced a version of the Graphpower business graphics package that supports the new low-cost Hewlett-Packard 7470A two-pen plotter.

The software allows IBM Personal Computer, Apple II and Apple III users to create multicolor overhead transparencies and paper output in minutes.

GraphPower creates line, pie, bar, stacked bar, side-by-side bar, text and financial report charts. Up to four charts per page can be drawn, with a wide variety of coding patterns, including three types of shading; 100 shading densities; and solid, dotted or dashed lines.

GraphPower is written in UCSD Pascal and requires a 64K Apple II, 128K Apple III or 128K IBM Personal Computer. It is priced at \$295 and is available from Ferox Microsystems Inc., 1701 N. Ft. Meyer Drive, Suite 611, Arlington, VA 22209. Reader Service number 489.

Daisy-Aids

Daisy-Aids is a complete graphics software package for CP/M computers with daisy-wheel or thimble impact printers. Daisy-Aids consists of three programs including line/bar/scatter, pie charts and block charts.

The line/bar/scatter program starts by requesting titles and axis descriptions. Next, the axis types are selected and data values are entered. Six different lines can be plotted on the same graph.

The pie chart program generates single or comparison pie charts with diameters from two to six inches. Legends can be included inside or outside each slice. Two-color ribbons and different hashing schemes are possible.

Main menus for each program display a directory of graph files for that particular program. The main menu supports creating, editing, deleting and renaming graph files. All necessary file maintenance features are available from within the Daisy-Aids program. Escape Computer Software, Inc., PO Box 1771, Roswell, GA 30075. Reader Service number 492.

The Printographer

The Printographer is a graphics printer package that works on every combination of printer and interface with the Apple II/II Plus computers to print graphics in several formats. It has all the options found in other dump programs.

The program has the option to print pictures directly to disk, and then from disk without loading the file. This allows the printer to print your graphics out in single or multiple copies while you use the computer for other work. Using an ASCII Express, you can have your graphics printed out at a remote site via a modem.

The Printographer costs \$49.95. Southwestern Data Systems 10761-E Woodside Avenue, Santee, CA 92071. Reader Service number 482.

The Personal Secretary

SOF/SYS has announced the release of The Personal Secretary for the Apple II computer. The package includes a lower-case adapter as well as the usual shift-key modifications.

The Personal Secretary features a built-in database and built-in mail-list merging. People buying the package can receive a \$50 exchange credit toward purchase of the The Executive Speller (the company's top-of-the-line

word processor) when they choose to upgrade. All files and functions of The Personal Secretary are compatible with The Executive Secretary.

The Personal Secretary sells for \$99.95. SOF/SYS, Inc., 4306 Upton Ave. South, Minneapolis, MN 55410. Reader Service number 491.

The ZED-Full-Screen Editor

Zeducomp has announced the availability of ZED, a fast, full-screen text editor for Heath/Zenith personal computer users. When used with a suitable text-formatting package, ZED can be used for word processing applications.

ZED offers the following features: use of function keys for common editing operations; high-speed screen display; fast upward and downward scrolling; overlapped page scroll; forward and backward search/replace; ability to swap disks during edit; split and join lines; insert, indent and word-wrap modes; convenient block operations; blocks display in reverse video and 80-character maximum line length.

ZED runs on Heath/Zenith Z89, Z90 and H8/H17/Z19 personal computers with a minimum hardware configuration of 32K RAM and one 5¼-inch floppy disk drive.

ZED costs \$35. Zeducomp, PO Box 68, Stirling, NJ 07980. Reader Service number 484.

Retirement Planning

This financial-planning program for the Atari 400/800 allows you to establish a retirement plan that takes into account your personal situation in relation to inflation, investment returns, retirement income, etc. The program performs the following functions:

- Calculates a rate of inflation that is unique to each user's budget.
- Calculates a retirement fund that enables the retiree to keep his income constant in real terms.
- Calculates the portion of the retirement fund that will be provided by current assets.
- Calculates the yearly savings needed in order to accumulate the necessary retirement fund.

The program is priced at \$29.95, and requires 32K memory, disk drive and the Atari Basic cartridge. Advanced Financial Planning, 20922 Paseo Olma, El Toro, CA 92630. Reader Service number 481.

MICRO/SCAN

MICRO/SCAN is a database that stores information on 1400 publicly-held companies and 88 industries. The program is printed on two disks for the Apple II Plus and can screen, sort and rank companies in the database in seconds. The program can also print out investment and portfolio-analysis reports.

MICRO/SCAN operates without any timesharing or data-hookup charges, data processing turnaround delays, manual data entry or computer programming.

MICRO/SCAN costs \$3600 per year. This price includes the MICRO/SCAN software program and complete updated database on the Ford 1400. You receive the database on two new disks each month for one year. A demo disk with complete user documentation is available for \$25.

ISYS Corporation, 50 Church St., 4th Floor, Cambridge, MA 02138. Reader Service number 480.

PairStat

PairStat is a powerful collection of tools used to

evaluate and present paired data. The program includes data entry, computation and editing features; scatter or smooth line plotting; curve fitting; and calculations from the curves.

The program can use up to 1000 data pairs; plot up to 11 different data sets on one graph; and perform up to 20th order polynomial regressions.

The user can define functions to manipulate data. Curves can be integrated, differentiated and interpolated. Also, seven reports may be generated on the printer.

PairStat is designed for the IBM Personal Computer with one or two disk drives, 64K bytes of memory, 80-column display, IBM or Epson Printer.

PairStat sells for \$150 from Davell Custom Software, PO Box 4162, Cleveland, TN 37311. Reader Service number 490.

Tax Package

Active Computer Enterprises has announced the availability of its federal tax preparation package. The program was designed and written using the expertise of both computer programmers and federally enrolled tax agents. The program has 14 schedules and 11 forms, and was field tested on over 3100 complete tax returns that were done by more than 40 tax counselors.

The program operates on any CP/M 2.2x operating system. Two eight-inch disk drives are required (5¼-inch formats will be available soon).

The tax program sells for \$500; demo packages are available for \$55. Active Computer Enterprises, 1953 E. Apache Blvd., Tempe, AZ 85281. Reader Service number 496.

POWER for CP/M systems

POWER gives you menu control for the CP/M operating system. With POWER you never have to type a file or program name in normal computer housekeeping chores. You transfer files

without having to type file names. The computer feeds the names for you, and you select the files by number from a screen menu. With the numbered menu, you can erase files, type files to screen or printer and even run your programs. The purpose of the POWER menu function is to give you protection from your own typing mistakes.

POWER is a series of 50 user-friendly housekeeping CP/M programs in one 12K package. For the advanced programmer, the monitor commands read and write to any selected track or sector from any location in memory.

POWER's 50 commands are fully explained in the alphabetized 60-page manual. The package is hardware independent and will operate on any standard CP/M system.

It is available in all disk formats for \$149.

COMPUTING!, 2519 Greenwich, San Francisco, CA 94123. Reader Service number 495.

PETSPEED

Small Systems Engineering has released the newest version of PETSPEED, the Optimizing Basic Compiler.

PETSPEED relies on optimization to reduce program running times, and eliminates unnecessary program complexities by analyzing source programs for the best ways to speed processing time. PETSPEED is available for any combination of 4000 and 8000 series Commodore computers using 8050 or 4040 disk formats.

PETSPEED automatically uses faster integer arithmetic whenever possible. Frequently occurring variables and arrays are handled automatically. It sells for \$325. Small Systems Engineering Corporation, 222-B View Street, Mountain View, CA 94041. Reader Service number 485.

The Draftsman

The Draftsman is a general graphics program for the IBM Personal Computer that makes it fast and easy to produce quality charts and

graphs.

The Draftsman can generate standard graphs with a minimum of input from the user. Screen images can be printed on the IBM or Epson MX-80 printer. Graph formats include all standard business graphs: pie charts, bar charts (including stacked and clustered bars), line graphs and scattergrams.

No special language or command syntax has to be learned to use The Draftsman. The entire user manual is stored on disk and can be viewed either sequentially or at random.

The Draftsman runs on the IBM Personal Computer with 64K bytes of memory; however, 128K is recommended. A color monitor and two disk drives are also required. The price is \$200.

Starware, 1701 K Street N.W., Washington, DC 20006. Reader Service number 488.

Peachtree Graphics Language

Peachtree Graphics Language is a highly interactive graphics package that can be used with any CP/M-based computer. PGL is device-independent for both input and output, and includes two-dimensional and three-dimensional graphics transformation.

Pie and bar charts, multiple exploded pie segments, zooming, panning, strip chart scrolling, multiple independent graphs, rotation and graphic arts are among the included features.

PGL offers English commands that make it possible for inexperienced users to write interactive graphics programs for business, engineering and scientific applications.

Standard device drivers included with the system support the Hewlett-Packard HP-GL series of plotters, Epson printers, Digital Engineering Retrographics terminal, Summagraphics BitPad One digitizer and any Plot-10 compatible CRT.

Peachtree Software Incorporated, 3445 Peachtree Road, N.E., Atlanta, GA

30326. Reader Service number 479.

Secure

Secure is a program that is designed to stop unauthorized access to CP/M files. Secure uses two user-supplied keys to safeguard files on any Z-80 based microcomputer. Its file handling is limited only by available disk storage space.

Secure can be used to protect financial data, customer data, mailing lists, confidential correspondence, computer programs, or any data that will be transmitted to another location using a computer communications program.

The program is available on a variety of disk formats for any Z-80 based microcomputer using CP/M 2.0 or higher. Secure sells for \$150. Century Systems, Inc., 12872 Valley View Ave. Suite 11B, Garden Grove, CA 92645. Reader Service number 487.

Landlord Version 2.0

The Landlord manages any kind of income property including: apartment, marinas, offices, retail space, shipping centers, single family homes, ministorage units, duplexes, aircraft hangars and trailer parks.

The Landlord keeps track of names, addresses, phone numbers, security deposits, rent charges and payments. The program can also print mailing labels. The Landlord can maintain information on 590 tenants.

The Landlord is flexible enough to be used by single property owners or by property management firms that manage multiple locations for different owners. The program will keep track of rental units up to 100 locations and for as many as 100 owners.

The Landlord sells for \$795. The software requires an Apple II computer with 48K RAM, two disk drives and an 80-column printer. Min Microcomputer Software, Inc., 1501 Johnson Ferry Road, Suite 220, Marietta, GA

30062. Reader Service number 486.

The Big Math Attack

The Big Math Attack is an educational program designed to encourage learning in children from ages 6 to 12. The program combines the excitement and challenge of an arcade game with the basic math skills of addition, subtraction, multiplication and division.

An equation is launched from a spaceship. The child must enter the correct answer before the equation lands on the city. Feedback is given to the child after each answer. As his skill increases, the problems fall faster. The goal is to achieve the highest possible score before five problems land.

The Big Math Attack uses full color, high-resolution graphics, sound and easy-to-read numbers and letters. It is available on disk for the Apple II computer (48K, Applesoft). It is also available on cassette

(16K) and disk (24K) for the Atari 400/800 computer.

The Big Math Attack sells for \$25 on disk and \$20 on cassette. T.H.E.S.I.S., PO Box 147, Garden City, MI 48135. Reader Service number 494.

Learning Games

Spinnaker Software has announced the release of three learning games for the Apple II, Atari 800(48K) or IBM PC(48K).

Snooper Troops is a series of interactive mysteries incorporating high resolution graphics and animation. The player is a private detective trying to determine which of eight suspects committed the crime. The game helps the player improve his analytical skills, and is aimed at the 10-to-adult age group.

Story Machine, for five-to nine-year-olds is a software toy that teaches the young computer user how to communicate with the computer while developing his ability to write sentences and para-

graphs. The child writes any sentence desired using nouns, verbs, prepositions, etc., which are provided for the child. Several sentences can be sequenced to form a paragraph. The computer animates the sentence or paragraph using full-color graphics and sound. For example, if a child writes "The boy jumps over the house," a boy and a house will appear on the screen, and the boy will jump over the house.

Face Maker, for the five-to-eight age group, presents a blank face outline which the child can complete by selecting from menus of eyes, ears, hair, etc. The child can write very simple programs which will animate the completed face through a series of expressions (smile, wink, frown, wiggle ears, stick-out tongue). There is a memory-development game in which the computer performs a sequence of expressions with the face; the child then tries to exactly repeat the sequence.

Snooper Troops I and II cost \$44.95 each. Story Machine and Face Maker are each

\$34.95. Spinnaker Software, 26 Brighton St., Belmont, MA 02178. Reader Service number 483.

Millionaire

Millionaire is a computer game that brings you into the world of Wall Street. Players can manipulate as many as 15 different stocks and can perform an array of transactions including buying and selling stocks, put options, call options, buying on margin, borrowing against your net worth and others.

You can summon each of the 15 stocks' corporate histories as well as week-by-week industry trends and graphs. Millionaire is available for the Apple II Plus, Apple III (\$79.95); IBM Personal Computer, Osborne and other CP/M systems (\$99.95). The game is available on 5¼-inch and eight-inch disks.

Blue Chip Software, 18656 Ventura Blvd., Suite 215, Tarzana, CA 91356. Reader Service number 493.

MW-100 is the first American printer for the TS 1000 personal computer.

MW-100

The MW-100 is the first American printer for the Timex-Sinclair TS 1000 personal computer (formerly the ZX81). The MW-100 is a dot matrix printer that uses standard 1 $\frac{3}{4}$ -inch adding machine paper tape and ribbon cartridges.

The printer generates a 16-character line, half of the TS 1000's 32-character screen. It can be operated in any of three modes. For

displays that are already 16 characters or less, the printer will reproduce the contents of the screen line for line. For wider displays, the MW-100 can either print consecutive half-lines, or else output both sides of the screen separately.

You can use the TS 1000 to keep hard copy records of programs, print out lists of data, run mailing lists and generate complicated spreadsheets and reports. MW 100 is priced at \$119.95 and is manufactured by Mindware, Inc., 70

Cameo Electronics' Winchester hard disk subsystem.

The UltraRAM memory board for the IBM Personal Computer.

Boston Post Road, Wayland, MA 01778. Reader Service number 474.

The Series 2000

Cameo Electronics, Inc. has announced a line of 5 $\frac{1}{4}$ -inch Winchester subsystems. The Series 2005 (5 megabyte) and the Series 2010 (10 megabyte) allow up to 20 megabytes of on-line data per system.

Apple DOS, CP/M and Pascal can be used together on the same drive by segmenting the disk into volumes (19 volumes per disk) and specifying the operating system for each volume. The drive is menu driven, and the most commonly-used commands are simplified into single-key commands.

The Series 2005 and Series 2010 are available for the Apple II using Apple DOS, CP/M and Pascal operating systems. Interfaces for IBM PC, Commodore PET, TRS-80 Models I, II and III and other computers are to be released in the near future.

The Series 2005 costs

\$2295. The Series 2010 is priced at \$2995. Cameo Electronics, Inc., 1626 Clementine, Anaheim, CA 92802. Reader Service number 477.

UltraRAM

Daystar Systems has introduced UltraRAM for the IBM Personal Computer. The add-on memory boards range in single slot size from 128K bytes to 512K bytes on a single board. Standard features include programmable start address, programmable block enable, parity-detection circuitry and fully expandable socketed memory array.

UltraRAM is plug compatible with IBM RAM expansion cards, and runs all IBM-supported software. The price ranges from \$795 (128K) to \$1595 (512K). Daystar Systems, 10511 Church Road, Suite A, Dallas, TX 75238. Reader Service number 472.

- ★ 2 RS232C Serial Ports
- ★ Dual 8" DSDD Floppy Disk System

SOFTWARE FEATURES: Your choice of either UniFLEX or OS-9 LEVEL TWO. Both are Unix-like Multi-User/Multi-Tasking Operating Systems.

56KB FLEX / OS-9 "SWITCHING" SYSTEM \$4148.49

HARDWARE FEATURES:

- ★ 2MHz 6809 CPU
- ★ 56K Static Ram
- ★ 2 RS232C Serial Ports
- ★ DMA Double Density Floppy Disk Controller
- ★ 2 Built-in 5 1/4" 40tr DSDD Disk Drives (80 Track DSDD Drive Option .. add \$400.00)

SOFTWARE FEATURES:

- ★ GMXBUG monitor — FLEX Disk Operating System
- ★ OS-9 LEVEL ONE Multi-tasking operating system for up to 56K of memory

WINCHESTER SUBSYSTEMS

Winchester packages are available for upgrading current GIMIX 6809 systems equipped with DMA controllers, at least one floppy disk drive, and running FLEX, OS-9 LEVEL ONE or OS-9 LEVEL TWO. The packages include one or two 19MB (unformatted) Winchester drives, DMA Hard Disk Interface, and the appropriate software drivers. The Interface can handle two 5 1/4" Winchester Drives, providing Automatic Data Error Detection and Correction: up to 22 bit burst error detection and 11 bit burst error correction.

Dual drives can be used together to provide over 30 MBytes of on line storage -- or use one for back-up of the other. (More convenient and reliable than tape backup systems.)

#90 includes one 19MB Drive, Interface, and Software \$4288.90

#91 includes two 19MB Drives, Interface, and Software \$6688.91

Contact GIMIX for systems customized to your needs or for more information.

The Space Tablet, the first three-dimensional spatial digitizer compatible with Apple II and IBM Personal Computers.

Apple computer. The pen provides high resolution in excess of 55,000 screen locations.

The pen comes with a complete interface for the Apple computer, and is supplied with full documentation and software on disk. Some possible uses are interactive video applications, point-to-operate control of any computer feature for shows and exhibits, and screen digitization. The light pen also lets you draw on the CRT as if you were using pencil and paper.

The pen costs \$250 from Symtec, 15933 West 8 Mile, Detroit MI 48235. Reader Service number 470.

A Space Digitizer

IBM Personal Computer and Apple II owners can record the x, y and z coordinates of any three-dimensional object with the Space Tablet, a space digitizer.

The Space Tablet comes complete with Space Graphics of Penguin Software's Complete Graphics System II.

With a single motion of the tablet arm pointer, a user can literally pull points and lines to new locations in three-dimensional space.

Applications include art, architecture, mechanical engineering, chemistry, education and medical research. The Space Tablet costs \$600 and is available from Micro Control Systems, Inc., 143 Tunnel Road, Vernon, CT 06066. Reader Service number 473.

E-1 System

The E-1, from Euclid Computer, Inc., is a single- or multi-user microcomputer based on the 8086-1 microprocessor, and is designed to operate at 10 megahertz with no wait states.

The MP/M-86-based 16-bit microcomputer is capable of operating up to ten remote workstations. The multi-user system can be upgraded to one megabyte.

The system's minimum configuration includes 512K Dynamic RAM with National

New Corvus network and Winchester disk systems allow up to seven Osborne 1 computers to share up to 80 megabytes of on-line mass storage.

Semiconductor's 8409-2 chip and two eight-inch, single-sided, double-density floppy disk drives with a total formatted capacity of over one megabyte of disk storage. The E-1 costs \$5995.

Euclid Computer, 3699 West 240th St., Torrance, CA 90505. Reader Service number 475.

Corvus Disk System For the Osborne

Corvus 6-, 11- and 20-megabyte Winchester disk mass storage systems are now available for the Osborne 1 personal computer. The Corvus disk system offers speed, reliability and greater storage capacity.

Installing the Corvus disk system is a quick and easy process. The cable from the Corvus interface card plugs directly into the IEEE-488 port on the front of the Osborne, so it can be connected or disconnected in just a few seconds.

The disk system is priced at \$3195 complete with inter-

face card and all required software. Corvus Systems, Inc., 2029 O'Toole Ave., San Jose, CA 95131. Reader Service number 469.

Interstellar Drive

The Interstellar Drive, a solid state disk drive emulator, has been introduced by Pion, Inc. Taking advantage of the latest second generation high density 64K DRAM technology, the product provides a fast mass storage device which speeds up any scientific, educational or business program requiring disk access.

The basic unit consists of 256K bytes of storage, user-expandable to 1 megabyte, and an appropriate interface card and all necessary cabling.

Interstellar Drive comes with its own independently regulated power supply to prevent power drain to the host microcomputer. Hardware error detection assures valid data. Hardware write protect prevents inadvertent data loss.

The Interstellar Drive is a solid state drive emulator from Pion, Inc.

Dot Matrix Printer Interfaces with Apple II
Featuring an Apple II-compatible parallel interface, Addmaster Corporation has produced a new dot matrix printer, Model 170. The interface includes a Centronics-type handshake and DB-25 interface connector, Baudot, and day — and time clock. The Model 170 provides 18 or 21 characters per line, 6 lines per inch print density, on standard 2 1/2" adding machine tape. Designed to use with personal computers, Model 170 will produce hard and carbonless copies of programs, data or results. Write Addmaster Corporation, 416 Junipero Serra Dr., San Gabriel, CA 91776 or call 213/285-1121.

These first graders talk to their computer using the VBLS voice-based learning system with voice input.

Drivers, diagnostics and utilities software are all provided as part of the basic package.

The Interstellar Drive interfaces with most popular microcomputers, including the Apple II and TRS-80 Model III, and with SS-50 and S-100 compatible machines.

The product costs \$1095 and is available from Pion, Inc., 74 Appleton St., Arlington, MA 02174. Reader Service number 460.

practice, review and testing.

To author a VBLS lesson, you type each question and answer into the computer. You then give the answer verbally into the microphone. As the spoken answer is entered, the computer is "learning" the author's voice pattern.

Some possible applications of VBLS are bilingual and foreign language study, technical and management training, pre-college basics, on-the-job skills training, remedial studies and special educational programs for the handicapped.

Price for a complete unit is \$894.95, and it is available from Scott Instruments Corporation, 1111 Willow Springs Drive, Denton, TX 76201. Reader Service number 468.

VBLS A Voice-Based Learning System

VBLS is a voice-based learning system that operates with the Apple II microcomputer. The system enables the user to communicate with a computer simply by talking to it in any language.

The system uses the computer, a microphone, a Scott Instruments' VET (voice entry terminal) and VBLS software. These components form an instructional tool for voice-based tutoring, drill and

Atari Interface No. 1

Interface No. 1, by Looking Glass Microproducts, lets you connect any printer with a Centronics-compatible parallel interface to your Atari 400/800. The interface connects using controller jacks

Interface No. 1 for the Atari 400/800 by Looking Glass Microproducts.

The RX-10 provides automated control of all lights and appliances.

J3 and J4.

A printer handler is provided on either cassette or disk. This handler replaces the resident one, and occupies less than 128 bytes of the program area. The printer handler is compatible with all Atari cartridges and programs.

The Interface No. 1 sells for \$85. Looking Glass Microproducts, PO Box 5084, Loveland, CO 80537. Reader Service number 476.

RX-10

The RX-10, developed by Environmental Control Systems, provides automated control of all lights, appliances, etc., using the intelligence of a personal computer. The RX-10 is a direct line interface: there is no unreliable ultrasonic link. A command console is not required for operation; however, it might be desirable for additional points of control.

Control of any electrical device connected to a remote switch is accomplished by a computer program which simply outputs values to the port to which the RX-10 is

connected.

Home control, energy management and security are examples of applications for personal computers. The RX-10 connects to any computer via a parallel port. If your computer does not have a spare parallel port, an interface card will be necessary.

The RX-10 is priced at \$149.95, plus \$5 shipping and handling. Environmental Control Systems, 9319 Willowview Lane, Houston, TX 77080. Reader Service number 461.

Pagemate

Pagemate is designed to hold any size book or magazine in place while you perform word processing or any task that requires you to refer to a source. The product allows you to save a great deal of time and aggravation.

Pagemate comes with extenders that make it easier to hold thick or heavy books. With the extenders the product costs \$15.95, and can be obtained from Pagemate, Inc., PO Box 199, Tulsa, OK 74101. Reader Service number 467.

The Pagemate holds books or magazines in place while you work on your computer. It's ideal for word processing.

THE SELECTRIC™ INTERFACE

Daisy wheel quality without daisy wheel expense.

You need the quality print that a daisy wheel printer provides but the thought of buying one makes your wallet wilt. *Selectric™ Interface*, a step-by-step guide to interfacing an IBM Selectric I/O Writer to your microcomputer, will give you that quality at a fraction of the price. George Young, co-author of *Microcomputing* magazine's popular "Kilobaud Klassroom" series, offers a low-cost alternative to buying a daisy wheel printer.

Selectric Interface includes:

- ◆ step-by-step instructions
- ◆ tips on purchasing a used Selectric
- ◆ information on various Selectric models, including the 2740, 2980, and Dura 1041
- ◆ driver software for Z80, 8080, and 6502 chips
- ◆ tips on interfacing techniques

With *Selectric Interface* and some background in electronics, you can have a high-quality, low-cost, letter-quality printer. Petals not included.

Credit card orders call TOLL-FREE 1-800-258-5473. Or mail your order with payment plus \$1.50 shipping and handling to: Wayne Green Inc. Attn: Retail Book Sales, Peterborough, NH 03458. Dealer inquiries invited.

The Add-A-Switch provides a power on/off switch omitted in the original design of the ZX-81.

Add-A-Switch

The Add-A-Switch is a power on/off switch for the Sinclair ZX81 and the Timex Sinclair 1000. The product offers the power switch omitted in the original design.

The Add-A-Switch is designed to provide greater convenience in computer operation, and will eliminate daily wear and tear on plugs and jacks.

The switch is a 1½ × 1½ × one-inch unit that installs with no computer modifications. Add-A-Switch costs \$14.95 and is available from Lyon Ware, 1520 S. Lyon, Santa Ana, CA 92705. Reader Service number 465.

Elite Controller Card

The Elite Controller Card offers an economical and sophisticated alternative to the standard controller card. The product has four-drive capability and is designed for any combination of Rana Systems Elite Minifloppy Disk Drives or Apple II Disk Drives.

The card automatically boots 13 and 16 sector disks, and is compatible with DOS 3.3, Pascal 1.1 and CP/M 2.2OB. It also features improved data separation, LED indicators of operating modes and diagnostic aids, power reduction capabilities and improved interface buffering design.

The Elite Controller Card, from Rana Systems.

The DMP-29, an eight-pen plotter from Bausch & Lomb.

The Elite Controller Card costs \$135, and is available from Rana Systems, 20620 South Leapwood Ave., Carson, CA 90746. Reader Service number 466.

DMP-29

Houston Instruments Division of Bausch & Lomb has introduced DMP-29, an 11 x 17-inch eight-pen plotter that features heightened performance and firmware attributes. The plotter attains a maximum pen speed of 22 ips. Higher plotter speed combined with an addressable resolution of 0.001 inch assures fast, quiet, accurate and stepless traces. Two Z-80 microprocessors supervise internal operation of the DMP-29 flat-bed plotter.

Inherent capabilities of the DMP-29 enable the plotter to define window limits, scale plots up or down as required, vary line intensity and invoke European character sets. It also automatically describes circles, ellipses and general curves. Internal diagnostics ease setup and maintenance,

while self-protect features guard against operator error.

DMP-29 costs \$1995, and is available from Houston Instrument Division of Bausch & Lomb, PO Box 15720, Austin, TX 78761. Reader Service number 464.

Mac Inker

Mac Inker automatically re-inks ribbons for any printer. The user simply loads the cartridge and presses the start button. The correct amount of ink is metered and evenly distributed across the ribbon.

You can re-ink ribbons over and over, and still produce clean and legible computer printouts. In addition to improving the quality of the printout, Mac Inker extends indefinitely the life span of the ribbon.

Mac Inker is available with multicolored inks and with cartridge loading stations for any current printer. The product costs \$54.95, and can be obtained from Computer Friends, 100 NW 86th Ave., Portland, OR 97229. Reader Service number 462.

Mac Inker, a new automatic ribbon re-inker for computer printers.

SOFTWARE REVIEWS

(from page 194)

protection via a ROM chip, and I don't like it at all. In this case, at least, it removes a great deal of the Apple's versatility.

For example, I use two word processors on my Apple, both of which require a hard-wire modification for caps and lowercase. This modification connects to the game I/O socket, and until now did not affect other software.

But the Basic' ROM chip also plugs into this socket, and with the word processing modification does nasty things to the keyboard output. For instance, I get @ for a P. With the Basic' ROM and word processing modification both in place, I can't even do a PR#6. Of course, I can rip out the word processing modification every time I want to run Basic' and remove the ROM every time I want to use the word processor, but this can be a pain in the backside.

I think the manufacturer will get a lot of complaints over this particular kind of copy protection. (Delta tells me that they have replaced this ROM with another, solving the problem. I would verify that before purchasing off the shelf.)

Incidentally, the manual says to install the chip so that the mark faces the front of the computer. No mark was visible on the chip I got with the program. Obeying Murphy's Law, I installed it backwards the first time, and nothing worked. Luckily, it's a passive device and no harm was done. When I turned it around it worked like a charm—except for being incompatible with my word processor.

According to the manual, if the security chip dies after the 90-day warranty, I must pay \$25 for a new one. I hate the thought of having to pay for an item that protects the manufacturer and does nothing for me.

I have a Videx Videoterm 80-column board with software switching. Something in the Basic' initialization activates the board, but Basic' does not support it. This took some figuring out, for the screen went blank and the program appeared to hang. When I finally plugged the monitor directly into the Apple's 40-column output, all was well again.

These two problems require me to spend several minutes converting my Apple for use with Basic', and several more converting it back to word processing. My poor brain being what it is, I usually have a false start before remembering to make the conversion.

Operational Difficulties

The documentation recognizes that some Apples have more than one disk drive, but the program supports only one—except in the catalog function. This

means that if you're saving your program under development to a data disk, you must swap disks every time you want to switch modules in Basic'.

The copyright notice comes up whenever you enter Edit mode, and this is evidently on a separate little program, for you must wait for it to time out before the disk starts to load the Edit module. When you want to switch in and out of Edit often, this is frustrating.

The printer toggle is on the master menu, with no way to turn the printer on or off from within a module. This means that if you have the printer on when you select Edit, and accidentally press "P" without being in Add mode, you'll have a long wait while the system prints out a listing that you didn't want.

Occasionally the program crashes with the message, "SYSTEM ERROR #"(n). This is neither a frequent nor a serious problem. It's not serious because no data is lost, and a second attempt has always succeeded for me.

The manual asks that the user write Delta when system errors occur, identifying the error number and describing the circumstances—hopefully, so they can strengthen the program.

Conclusion

In spite of these problems, Basic' is a joy to use. It forces us into structured programming, and results in a program that's easier to plan, code and debug. It includes a number of commands not normally available in Applesoft, and yet produces a program that runs in Applesoft. I will probably use it in spite of its faults, and hope that a later version will clear those up.

(Delta Micro Systems, PO Box 15952, New Orleans, LA 70175. \$129.)

David Goodfellow
Seattle, WA

Word Juggler

A word processor
For the Apple III that
Performs like the giants

Word processing—no modern office should be without it! Unfortunately, many corporations consider only the offerings of giants like Xerox, Wang and DEC.

Having long desired a word processor, we found that a microcomputer with a letter quality printer appeared to be capable of fulfilling our word processing needs for little more than \$6000. What was discouraging was the apparent unavailability of word processing software that was both powerful and easy to use. True,

there were many offerings, but most paled in comparison to a machine dedicated solely to word processing.

I was fortunate enough to encounter Word Juggler, a word processing program designed for the Apple III.

Word Juggler is a well-designed program that utilizes the number keys on both the typewriter board and the keypad to effect word processing operations. A plastic template, imprinted with the special functions of the keys, is provided.

For each special-purpose key there are two options shown, one above the other. The upper one is invoked by using the shift key. So that the standard QWERTY numbers and symbols are not disabled, the word processing functions at the top of the keyboard are accessed by first hitting the escape key (renamed Command by Word Juggler).

Examples of the Word Juggler key sequences required to perform typical operations are:

Start a new page: hit command, then new page

Center a phrase: hit command, then center

So far this looks pretty easy, but how about the more complex things like block moves and block copies? Both are easy! Hit the "5" key on the numeric pad and the message "POSITION CURSOR TO START OF BLOCK TO COPY AND PRESS SPACE" appears at the bottom of the screen. Compliance with that request yields another message: "POSITION CURSOR TO END OF BLOCK TO COPY AND PRESS SPACE." Following a response, the final message appears: "POSITION CURSOR TO LOCATION TO INSERT BLOCK AND PRESS SPACE."

The copying is very quick, taking less than two seconds to copy the above and does not involve the disk thrashing common to many other word processing programs for micros. A block move proceeds in a similar manner.

Other features included are block load and store, search and change commands. The change command can be either automatic, changing every occurrence of the search string, or manual, where the user is shown each occurrence in context and is asked whether or not the change should be made.

Both the search and the change commands can be invoked from either the current cursor location or from the start of the document. Text can be justified on both margins, centered, or left justified only. Automatic page numbering and the automatic repeating of labels on each page are provided.

As a bonus, Visicalc III print files can be edited as can Business Basic program files. The latter is important to me since I feel the editor provided with Business Basic is awkward.

Print enhancements such as underlining, bold printing, and superscripting and subscripting are made possible with

the use of a key peculiar to the Apple—the “open apple” key (it has an imprint showing the outline of the now familiar partially-eaten apple). Underlining is initiated by simultaneously pressing the “open apple” and the “u,” and is terminated by “open apple” with “U.” Subscripting is started by “open apple” and the down-arrow key and is stopped by “open apple” and up arrow. All print enhancement symbols appear in inverse video within the text.

Movement of the blinking cursor is controlled by the four arrow keys provided by Apple. By using the shift key with the left or right arrows, the cursor moves in increments of words rather than characters. The shift key and up or down arrow keys move the cursor to the start of the next video page. Striking the control, shift and the up arrow key moves the cursor to the start of text.

Keys are provided to delete the character preceding the cursor, the character at the cursor's position, the current word, and also to the end of the paragraph. The insert or replace mode is chosen by the “7” key on the numeric pad (the blinking cursor contains a “+” sign when in the insert mode).

In an inverse video display at the bottom of the screen, Word Juggler displays the name of the document, the current position of the cursor and the number of free blocks remaining in memory. Commands such as new page are embedded in the text as are end-of-paragraph symbols (a right arrow.) Formatting commands can be either included within the text or set up as defaults.

There is a “display document” key that permits the document to be previewed in the form it will assume on paper. While displaying the document in final form, Word Juggler marks where a page break will occur with a horizontal bright line.

This is a great aid and helps the user know where to insert pause and new page commands. In the display mode, text in excess of the screen width or length is viewed through a smoothly scrolling window controlled with the direction keys.

At any point during processing, the user can call up the main menu to either store the current document, load a new document, begin a new document, catalog the disk, or purge files from the disk. Word Juggler contains safety prompts to make sure the user doesn't inadvertently overwrite a needed document already on disk or accidentally clear the current document from the workspace without first saving it.

The main menu thoughtfully permits the user to format a new disk without exiting the program. A help key instantly displays the edit key sequences at the top of the screen. All of the bouncing back and forth to the menu or to the help screen is accomplished without having to access the Word Juggler disk, and

without losing any of the document.

A nice feature of Word Juggler is its ability to change printer configurations without going through a utilities disk. The printer driver contains options for most correspondence quality printers. The appropriate options are readily chosen without needing to know what each byte of the driver's configuration should contain.

Quark Engineering also offers a spelling checker, Lexicheck, for \$195, that checks the document against its 30,000-plus-word dictionary at a rate over 8000 words per minute using floppies. (It took less than 30 seconds to check this document.) A hard disk permits a higher rate. Lexicheck displays the number of words in a document, the number of unique words, and the number of words not in its dictionary.

Unrecognized words are shown in con-

Word Juggler
is so easy to use
that our secretary
was creating and
printing documents
without reading the manual!

text and may be replaced before proceeding to the next unrecognized word. You can add words to an auxiliary dictionary if desired. Like all spelling checkers, this one will not catch mistakes like “go reed a book.”

There are a few things that I wish Word Juggler would do. Sometimes I get carried away and delete too many words and would like to retrieve them from never-never land. I would also like to be able to bounce through text by sentence or by paragraph. Soft hyphenation would also be nice. However, I am not complaining.

Quark has come up with a product that is so easy to use that our secretary was creating and printing documents without reading the manual! This is not a procedure I recommend since the loose-leaf documentation starts with an excellent tutorial.

A benefit is that, for the price of a big Xerox 860, we now have two Apple III's—one for excellent word processing and another to perform our financial analyses, plus we have \$3000 in change. (Quark Engineering, 1433 Williams, Suite 1102, Denver, CO 80218. \$295.)

VersaForm

If you can afford
Only one program for
Your Apple—this is it

A lot of the programs you've read about sound pretty good, but it's hard to picture them paying for themselves. Right?

So... you've put off buying anything.

Well, get your checkbook out, because Applied Software Technology has released a program called VersaForm... that really isn't a program.

Instead, VersaForm will let you design just about any sort of filing and analysis system you want; for the small businessman or homeowner who perhaps can afford to buy just a single program... this is the one.

VersaForm is billed as a “business forms processor,” and the manual starts out by asking, “Can you fill in a business form? Then you can use a computer!” With VersaForm, it's true.

The thing that separates VersaForm from other, standard-type programs is that VersaForm handles documents, rather than just raw data. You first structure the business form you want. When the information on the form (customer's name, address, phone, etc.) is filled in, VersaForm files it away as a complete document, much as you'd file a piece of paper or ledger card containing the same information.

When you retrieve the information, it's displayed or printed just as if you'd pulled that item from a file cabinet.

But, since the data is on disks, VersaForm can do all sorts of analysis on the information for you, all to your own specifications.

So, while you may not be able to justify the cost of a pure inventory system for your business, VersaForm can handle the inventory for you. While you may not want to buy a program that can do mailing lists, VersaForm can do that, too. Also, it can take care of your personal records, sales analysis, budgeting information, invoicing... and just about any sort of file-type system you can imagine.

On top of this, when you buy an inventory program, for instance, you're limited by the choices in the program itself. For example, you'd probably have an out-of-stock summary report in about any inventory program you'd buy, but if you used VersaForm to handle your inventory, you can custom design any type of report you want.

The point is that once VersaForm has the information, you can extract it in about any combination you desire.

To do all this, you need an Apple II+, with two disk drives and an extra 16K bytes of memory. You can get that with the extra language card or a memory board (about \$150). VersaForm is written in Pascal, which your Apple will understand. The only real differences are that

Scotch Diskettes

Rely on Scotch® diskettes to keep your valuable data safe. Dependable Scotch diskettes are tested and guaranteed error-free. The low abrasivity saves your read/write heads. They're compatible with most diskette drives.

MC6801 APPLICATIONS PROTOTYPE BOARD

The APB is a small board which supports the MC6801 family of microcomputers. It is described in Motorola's application note AN799. A typical 6801 member contains an enhanced 6800 processor, 2K bytes of ROM, 128 bytes of RAM, a 16-bit programmable timer, parallel I/O and a serial communications interface. In addition to the resources of the 6801, the APB provides an additional 2K bytes of EPROM (TMS2716), 2K bytes of RAM (2114L), and a full duplex RS-232 interface. It also supports special versions such as the 6801G1 with its LILBUG™ monitor, and provides on-board programming of the 6801 EPROM version.

The APB is an excellent educational aid which allows for evaluation and familiarization of 6801 family members. It is great for prototype development. Since the "nuts and bolts" are already in place, the designer need only add the necessary interface circuits for a particular application. It can also be used as a simple cost-effective dedicated controller for those limited quantity applications.

Besides being so practical, it is a fun little board. Order yours today!

New JAWS-IB

The Ultrabyte Memory Board

Due to the tremendous success of our JAWS I, we were able to make a special purchase of first-quality components at below-cost prices for JAWS-IB. And we are sharing our cost saving with you. But don't be surprised if the next time you see this ad the prices have gone up substantially. Better yet, order now, and get the best memory on the market at the best price on the market.

ONE CHIP DOES IT ALL

Jaws-IB is the Rolls-Royce of all the S100 dynamic boards. Its heart is Intel's single chip 64K dynamic RAM controller. Eliminates high-current logic parts... delay lines... massive heat sinks... unreliable trick circuits. JAWS-IB solves all these problems.

LOOK WHAT JAWS-IB OFFERS YOU

Hidden refresh... fast performance... low power consumption... latched data outputs... 200 NS 4116 RAM's... on-board crystal... RAM jumper selectable on 8K boundaries... fully socketed... solder mask on both sides of board... phantom line... designed for 8080, 8085, and Z80 bus signals... works in Explorer, Sol, Horizon, as well as all other well-designed S100 computers.

10-DAY MONEY-BACK TRIAL: Try a fully wired and tested board for 10 days — then either keep it, return it for kit, or simply return it in working condition.

NETRONICS R&D Ltd.
333 Litchfield Road, New Milford, CT 06776

your disks for your files must be "named" (the system does that for you quickly and easily) and that your first disk drive is #4, and your second is #5 (they're #1 and #2 with Apple DOS). Sticking a little number on the disk drives will help you remember.

VersaForm can support and work with an 80 column board, if you have one, and also with a fixed disk.

The program comes with six disks, a thick instruction manual, a quick reference card and a little booklet for a hands-on experience using the system. One of the disks is a tutorial disk, designed to be used with the booklet; it gives you a chance to play with VersaForm, and design forms, print reports and change data without taking the chance of ruining something. Good idea.

The one thing you need to keep in mind when you're using VersaForm is that you have to spend some time thinking about the information you want on your form before you actually start to design it. As you're designing the form on your video screen, you can change it, of course, as much as you like. But once you've started to save data using this form, you're not allowed to change the form itself. So the lesson is to think ahead a little bit and make sure all the information you might need is included in the form before you start. It's not a bad idea to include a cou-

ple of extra miscellaneous lines for data in case you forget something.

As you design the form, VersaForm has two options you can use: automatic checking and automatic filling.

Automatic checking will check the items entered against specific conditions that you set up when you design the form. For example, if your inventory numbers have three letters, a dash, two numbers, another dash, a letter, a dash and then two numbers (like JBL-44-A-37), you can instruct VersaForm to accept inventory item numbers that exactly match that format, and to beep and not accept any other format.

Automatic filling lets you use VersaForm's unique capability of looking up items for you. You can have a list of up to 99 items for each automatic filling choice. So, for example, if you were using VersaForm as an inventory program, you could design the forms so that when you entered a stock number, the program would automatically look up that item's description and price and fill it in on the form for you.

You can override this function, if you wish. For instance, if you've used VersaForm as outlined above, and it looked up the description and price of an item, you're allowed to change that description or price if you wish.

VersaForm can also do any calcula-

tions your form might require.

As you're working with your forms, VersaForm provides you with a help command. Basically, the program will then display the instructions for the procedure you're working with (the same instructions that are in the manual). This is a good idea, and one that saves a lot of time spent looking up things in the index.

The real strength of VersaForm shows up not only in its file-handling ability, but in the infinite variety of reports and analysis-type things you can do.

You can, obviously, print all the data in a certain file, but you're also able to design a report based on what you want. This is done in much the same way you designed the original form.

You have to instruct VersaForm on what items to print, where on the page you want them printed and which selection conditions have to be met to have VersaForm pull an item from the file. It can sort your items alphabetically, numerically low to high or vice-versa, by date of entry, etc.

One area of VersaForm that could stand a shade of improvement is the way it handles printing. They never suggest that you turn on the printer. Instead, you'll see a question like OUTPUT DIRECTLY TO PRINTER Y/N? If you answer Y and don't have the

machine turned on and on-line, the system will hang.

No big deal—you just hit Reset and it will start over, but a little extra help would have been nice. The system, by the way, is Reset protected in the sense that if you do hit the Reset button, the program starts over by itself.

When you are doing a report, you're not limited in the number of items you can have; often, a program will pull too much data into memory and simply run out of storage space. VersaForm gets around this problem by using a Report Work Disk; as the data is collected from your data file (to generate a report), it's saved on the Report Work Disk. Your printout, designed according to your specifications, is then printed from this disk. It's a good way of handling things, and virtually lets you work with as many report items as there are items stored on a file disk.

Perhaps the best feature of VersaForm is its lack of limitations. If you buy a mailing list program, for example, you're hemmed in by the program selections that are built into it. It's easy, but limiting.

VersaForm, on the other hand, does require a bit of thinking. Someone actually designs the forms, printouts and reports . . . but you're literally unlimited in what you can do with them. Also once a form is

designed, anyone—your secretary, or whoever—can easily fill in the data, just like she'd been doing it on paper—only with much more speed and accuracy.

For the businessman who can't afford to buy a program for every application he has—or for the homeowner who can afford just a single program, VersaForm is ideal. Its use is limited only by your own imagination.

Apple Flasher

Convenient and rapid
Display of high
Resolution pictures

Perhaps it should be made clear at the outset that this is not one of those "for adults only" programs—you don't even need a raincoat to use it!

Apple Flasher is billed as a powerful and flexible graphics display tool which will find and display high resolution pictures stored on disk by other Apple II programs. Apple Flasher is written for the

Apple II Plus or Apple II with Applesoft ROM and supports one or two disk drives (DOS 3.3).

Apple Flasher lets you display numerous high-resolution screen pictures with a minimum of fuss and little, if any, programming. The capabilities included provide some unique ways to handle binary high-resolution files.

There is no provision in the program for creating high-resolution screen display files. There are, however, several excellent programs on the market designed for just that purpose. Before attempting use of "Apple Flasher," you should have a disk or two (DOS 3.3) of picture files.

After the program disk is booted, you are asked to place a picture disk in Drive 1. At this point, you may remove the program disk and place a picture disk in Drive 1 or specify Drive 2. Pressing the escape key during any operation returns you to the menu; pressing escape when the menu is displayed terminates program operations.

Several modes of operation are provided: search diskettes for high resolution pictures, single picture display, scan display, projector mode and auto display.

Almost all the commands used are single keystrokes; the program does a good job of prompting the actions required.

To search a diskette for high resolution picture files, you need only type the num-

"MR EDIT"™ VIDEO TEXT EDITOR

The INTELLIGENT Workhorse of CP/M & MP/M

PARTIAL COMMAND SUMMARY:

- Cursor Control: up, down, left, right, by character, line, word, paragraph, screen, buffer; user defined tab stops. User definable visible Tab and Carriage Return characters.
- Delete character, word, line (all bidirectional), to EOL BOL; area or paragraph.
- Ability to select any area of text for various operations.
- Automatic word wrapping at any column; automatic paragraph alignment.
- List on Line Printer by line or area.
- Extensive search/replace capabilities; supports up to 10 simultaneous search/replace arguments. Local or Global search capability.
- Disk Directory and File Deletion, both selective by user, drive, and file, with wildcards allowed. Selective Disk Reset.
- HORIZONTAL window control for easy editing of material wider than the screen.
- Primary and secondary files for both input and out, if needed.
- UNSURPASSED edit command files and iteration macros.
- Indent level control for structured programming.
- On-the-fly definition of a function key as any combination of commands.

FEATURING:

- User Configurable to ANY non-memory mapped VDT with at least 12 lines of 64 columns.
- Fully screen oriented with comprehensive status information line.
- User defined mix of commands and function keys.
- Function keys are LIVE and screen of text stays in place and in view EVEN IN COMMAND MODE.
- Cursor is maintained in proper text location EVEN IN COMMAND MODE.
- Can reference any combination of Drives and User Numbers.
- English language commands: can be abbreviated as desired.
- Insert, Overwrite, and Command modes.
- Can be used Standalone or with a Text Processor for Word Processing.
- Handles MBASIC Line continuation.
- User may specify ANY command as a command key via configuration program. Special prefix keys (also definable) allow multi-function command keys. THE ENTIRE COMMAND KEY STRUCTURE, BOTH LAYOUT AND CONTENT, IS USER-CONFIGURABLE.

ONLY \$119.95 with complete documentation and installation instructions. Manual is available separately for \$15.00 (TN residents add 6.75% sales tax). VISA and MasterCard welcome. Order today by letting us know the disk format desired. Free technical summary available on request.

ber of the drive in which the disk is located. When the files have been located, their names and a key letter for each are displayed. If no picture files are located on the disk in use, the program promises to inform you within two seconds.

Single picture display consists simply of pressing the key which corresponds to the key letter shown by the picture file name. Once a key is pressed, the picture is displayed in about two seconds.

Drives may be alternated by pressing the number of the drive prior to the letter for the picture file.

Once a picture is on the screen, pressing the spacebar will display the name, letter key and timing information for that particular picture file across the bottom of the screen. Pressing the spacebar again returns full-screen display mode.

The scan display mode (started by typing S) will automatically show, in sequence, all the pictures on the disk in the most recently used drive. Each picture is shown for about two seconds. Scan display can be temporarily halted and restarted by pressing any key but the spacebar.

Operation of the spacebar is the same as that described in the single-picture-display mode. Once all the picture files on a disk have been displayed, the scan function automatically starts all over again at the beginning. Pressing the escape key will stop the scan and return you to the program menu.

In operation, the auto display mode is very similar to the scan mode just described, with one very important difference—timing information may be embedded in each picture file. When using time codes, each picture file may be displayed anywhere from two seconds to four minutes. A short keyboard routine for inserting time codes into your picture files is included in the user's manual.

Files without timing information will be displayed for approximately 1.5 to two seconds in the auto display mode. To initiate auto display operations, type Z for one disk or CTRL-Z for automatic display of pictures contained on both disk drives. The show automatically repeats when completed and may be interrupted by pressing any key.

The projector mode faithfully imitates the action of a circular-tray type slide projector, right down to the remote control (game paddle). Typing CTRL-P will display the first picture on the disk in the current drive. From there you are free to use either the game paddles or the left-right arrow keys on the Apple II's keyboard.

To move forward through the pictures, turn the game controller clockwise and press the button to display the next picture. Turning the control counterclockwise and pressing the button returns you to the previous picture. From the keyboard, the right arrow key advances and the left arrow key returns you to the previous picture.

Here's the kicker—the disk is always loading one picture ahead. Changing from one picture to the next or back to the previous one is instantaneous; press the button (or key) and there it is! An audible signal is used to indicate the last picture on a disk. At this point you may insert a new disk or type the number of the other drive to continue. Pressing the escape key returns you to the program menu.

Apple Flasher does exactly what the manual says it will. It provides a convenient and rapid way to display high resolution pictures previously stored on diskettes. The simplicity of the various display options reflects a great deal of planning on the part of the program writer, Paul W. Mosher.

Who can use a program like Apple Flasher? Almost anyone involved with Apple II graphics for either a stationary display or visual-aid portions of a presentation. I particularly like the projector mode, since pictures can be flashed on the screen with a minimum of attention to the computer itself.

If you can use a slide projector, you can use Apple Flasher. It's just that simple! With a little imagination, almost any Apple II owner who would like to show off the graphics-display capabilities of his machine can look like a real pro.

The documentation accompanying this program is clear and concise. The error trapping and clearly outlined prompts built into the program will prevent you from going too far astray. Crow Ridge offers back-up copies of the program, replacement of damaged disks and updates to registered owners of Apple Flasher.

Any problems? I couldn't find any operational problems. However, there are a few capabilities I would like to see included. The auto display mode reads each disk in sequence from the first picture to the last. It would be nice to specify an alternative sequence for the pictures to be displayed in without having to revamp the order of the binary files.

It would also be valuable, under some circumstances, to be able to control the display from some other user-generated program. This capability would be especially well suited for display situations where a program is demonstrated and then further explained by a sequence of high resolution pictures.

Not every Apple II owner will have either the need or occasion to use Apple Flasher. For those of us who will, however, this program has a lot going for it. The combination of a program that does exactly what it is intended to, offers clear documentation and a bargain price makes Apple Flasher a wise selection.

(Apple Flasher is published by Crow Ridge Associates, Inc., PO Box 1, New Scotland, NY 12127, and sells for \$34.50)

Brand New Catalog

With Over 150 Programs

Best
Software
Under The
Sun

Instant Software's new catalog is free and it offers 150 of the finest programs you can find. At reasonable prices...and a variety you've never seen before in one catalog. And they're all contained in the new 16 page 1983 Instant Software catalog. You'll find:

ASSEM/ZSIM—2 great utilities in one super package. Assembly language programmers, this package solves all your programming problems from ASSEM to ZSIM.

Super Utility Plus—the most powerful program of its kind. A must for every serious TRS-80* disk installation.

Geography Explorer Series—the exciting, attention-holding series that teaches your children essential geographical facts.

Phaser Blast—phaser-armed robots, enemy Hovertanks... prepare for a journey into the war of the future.

Space Shuttle—experience the ultimate flight as you pilot America's

Columbia through launch, orbit, re-entry and landing.

Plus dozens of other practical, mind-boggling or spine-tingling programs.

And now you can get the new 1983 Instant Software Catalog absolutely free. You don't even have to pay for the phone call. Just dial toll free:

Become a Better Programmer with Basic'

Big League Word Processing At a Minor League Price

The One and Only Program for Your Apple

Show Off Apple Graphics

Basic'

A program development system
For the Apple that
Goes beyond Applesoft

Basic' (meaning basic prime) is a program development system which forces structured programming and uses no line numbers. It allows no Gosub statements, but adds a number of statements not found in standard Applesoft. Yet a program compiled by Basic' looks like any other Applesoft program—complete with line numbers and GOSUBs, and without any statements not normally found in Applesoft.

There are several advantages to programming with Basic' instead of going directly to Applesoft. First, it's easier to write Do Search than it is to write GoSub 650, because you don't have to maintain a list of line numbers identifying subroutines.

Second, the indented, structured format of a Basic' listing is easier to read. This makes understanding another programmer's efforts much easier. It also makes debugging and modification easier.

Finally, the addition of several statements not found in Applesoft makes short work of what used to be tedious routines. The tedious routines appear in the compiled program, but Basic' wrote them, not you.

The system is making a better programmer of me, because its structured format helps me keep track of what I am doing, and its more powerful commands allow me to do easily what had been difficult. Comparing a Basic' listing with its compiled Applesoft counterpart results in a learning experience that's bound to improve programming techniques.

Control Statements a la Basic'

For...Until. This works just like *For...Next* does in Applesoft, except it is more powerful, and you don't use the

Next. Everything inside the loop is indented, and ending the indentation implies a Next. The *Until* statement is a powerful option within the loop, allowing the program to break out of the loop before the count is completed if the *Until* statement is satisfied. Loops are nestable as in Applesoft, but are more easily seen in a Basic' listing because of the indentation.

Repeat...Until. This new statement builds a loop that requires no counter. With it you could repeat a program operation indefinitely, or until something happened to satisfy the optional *Until* statement.

PROC (name). This statement replaces the Applesoft subroutine. Lines under the procedure name are indented automatically. The subroutine ends when you force an unindented line.

Do (procedure name). This statement replaces the GoSub command, and is much easier to use because you don't have to state the line number of the subroutine.

If...Else. This works like the Applesoft *If...Then*, except the *Then* is unnecessary because of the indented formatting. The *Else* option is valuable and allows some alternate action when the condition tested by the *If* is false.

Case (expression)...Else. This new statement works something like *If...Then*, in that it tests for a condition and selects an action accordingly. The *Case* statement contains a string or numeric expression; subordinate lines must reflect the nature of that expression. Subordinate lines are mutually exclusive, so the first line that satisfies *Case* ends the routine. The *Else* option may be added to perform an action when no other line satisfies *Case*.

ONERR. This statement commands a subroutine which is executed when an error condition occurs. The only difference I could find between this and an Applesoft *ONERR* statement is that Applesoft *ONERR* requires a GoTo statement; in Basic' *ONERR* simply commands an action in statements indented beneath it.

EGU. Normally, the program is compiled into Applesoft with sequential line numbers within each routine, with the first routine at line 200, the second at 400, etc. *EGU* allows you to specify the line number at which a particular routine will start.

Program. This statement is used to chain several programs together. If you are writing a program that is too large to fit in the Basic' buffer, you write segments of it and save them individually. The *Program* statement compiles them one by one and saves them as one large Applesoft program.

The Basic' buffer holds 420 lines of code, with a maximum of 240 characters per line, so it would take a pretty large program to require this. Since these miniprograms still exist on disk in their uncompiled form, you can use them again in another program.

The *Edit'* module, from which you type in the program, has a good text editor that allows quick and easy modifications. Editing commands within this module include cut text (for removing blocks of lines), insert, delete, move cursor right/left, tab right/left, page forward/backward, forward/backward one line, find, replace and move.

In addition to this module you can (P)rintout (if you had turned on the printer before entering the module), (L)oad an existing text file and (S)ave. Incidentally, the program remembers, from one session to another, the name of the last file you worked on, and defaults to that file with the load command. You can select a different file by typing over the filename prompt. The same is true with *Save*.

Installation Problems

Basic' does make programming easier, allowing you to easily do a lot of things that are difficult in Applesoft. But this version has a number of problems that make it difficult to install and to use.

This is my first experience with copy

The Apple Polisher

Now Available!
The new Apple™—
compatible disk drive
from A. M. Electronics

The wait is over.

Now you can get an affordable, high-performance, 5¼-inch disk drive that is fully compatible with your Apple computer.

Our drive comes complete with an Apple-beige case and connecting cables. This drive has been fully tested with Apple's

disk operating system and software. Just plug it in — it's ready to run.

You get a 90-day limited warranty and a 10-day money back guarantee.

This Apple-compatible drive is available now from A.M. Electronics for just \$395.00 (40-track) or \$495 (80-track).

Today, upgrade your Apple computer with an A.M. Electronics disk drive — and go to the head of your class!

THE PROWRITER COMETH.

(And It Cometh On Like Gangbusters.)

Evolution.

It's inevitable. An eternal verity.

Just when you think you've got it knocked, and you're resting on your laurels, somebody comes along and makes a dinosaur out of you.

Witness what happened to the Centronics printer when the Epson MX-80 came along in 1981.

And now, witness what's happening to the MX-80 as the ProWriter cometh to be the foremost printer of the decade.

SPEED

MX-80: 80 cps, for 46 full lines per minute throughput.

PROWRITER: 120 cps, for 63 full lines per minute throughput.

GRAPHICS

MX-80: Block graphics standard fine for things like bar graphs.

PROWRITER: High-resolution graphics features, fine for bar graphs, smooth curves, thin lines, intricate details, etc.

PRINTING

MX-80: Dot matrix business quality.

PROWRITER: Dot matrix correspondence quality, with incremental printing capability standard.

FEED

MX-80: Tractor feed standard; optional friction-feed kit for about \$75 extra.

PROWRITER: Both tractor and friction feed standard.

INTERFACE

MX-80: Parallel interface standard; optional serial interface for about \$75 extra.

PROWRITER: Available standard—either parallel interface or parallel/serial interface.

WARRANTY

MX-80: 90 days, from Epson.

PROWRITER: One full year, from Leading Edge.

PRICE

Heh, heh.
